Glacier Gulch, B.C.

Dorothy Atkinson 403-920-4347 Yellowknife

- worked on property for 9-months
- report "Glacier Gulch" 1981
- good section through rhy. plug
- several holes (about #130's)
- flat top about 3000' i.e. ~~is~~ "3000 stock"
- layered veins - unknown source (to Dorothy)
- doesn't think that they come from the g3 zone
- 4 holes in g3 zone - 2 same but 2 different - e.g. may x enoliths
- good crenulate g3 + ^{UST's} plumose feld.
- br. zone - messy down side of plug
- still no other major intrusions known in area
- Wayne Lenton metallurgist in charge of prop.
- doesn't know Cu content of ore zone
- layered veins don't extend across top of plug
- all recent holes drilled up
- she presented CID paper on property a couple of years ago in Smithers

- Roundy Creek - some good (same) crenulate g3 in layers in drill core below. No mineralization

Drakeburg - Source pluton (g3?) not found yet but skarn with g3 veins in area
vein dykes UST's g3 (to apical matrix)
