Dear Ed:

Sorry for the delay in getting this material back to you. It got done piecemeal and maps and some reports outside. I have lost track but I hope that it is all here.

I enclose a copy of a recent paper of ours on Sulphurets, a schematic section that was removed from the paper because of objections of the critical reviewer and a copy of a regional sketch map. I will publish the section in our next paper.

You might note that we have changed the geology considerably from that of others. We emphasize an important erosional unconformity on top of folded Stuhini Group rocks. Also an unconformity or disconformity beneath Dilworth rhyolite with major lateral facies changes in the underlying Hazelton Group rocks. You can also note that we emphasize southeasterly- and westerly-directed thrust faults and overturned folds.

Thanks again for the loan of the material and for your continued help. I hope that things are going well for you.

Very best regards.

Sincerely,

R.V. Kirkham
