VIA TELECOPIER AND MAIL

Dear Rod: 

Thanks for your letter of April 29, 1991. We are prepared to bear the cost of your 1989 and 1990 Sulphurets analyses which you quote as numbering 112 samples at approximately \$18 per analysis.

Please rush so that we can incorporate into our mapping prior to leaving for the field.

Enclosed map with circled samples are of particular interest. Are these among those you are sending to Bondar Clegg? Also of interest, prior to June 1, are all Chibougamau sample results. We are uncertain at present with respect to analyses for the diamond drill holes which you mentioned. Please submit separate request for assistance when you are ready.

Yours truly,

NEWHAWK GOLD MINES LTD.

Dear Fred and Tony:

Steve Roach and I have identified that 108 of my surface samples for 1989 (26) and 1990 (82) from the Newhawk Joint Venture Sulphuret property remain to be analyzed. Four standards should be added bringing the total to 112. The cost per sample should be between \$17 to \$18 for Au (ppb) + 33 elements neutron activation analyses done by Bondar-Clegg.

If you agree to pay for the analyses, we should be able to have them done soon. The results can be sent to you in Vancouver and to us in Ottawa. You would be billed in Vancouver.

Within the next few weeks we will also have 170 samples (including standards) prepared for analyses from three diamond-drill holes (Esso #13 (Moly Zone); Esso #37 (Sulphurets Gold Zone), and Newhawk \$284 (Golden Marmot)). If you are interested we could make the same agreements for these analyses. Please let me know your decision soon.

Thank you for your consideration.

Yours truly,

R.V. Kirkham
