Dear Fred and Barry:

Enclosed are four 1:5 000 maps on stable bases showing the unchecked locations of my field samples (1986-1989, inclusive) for your Sulphurets property. They were put on stable bases so that you could merge them, if you so desired, with the old ESSO Minerals orthophotograph base maps. We are just finalizing lithochemical analyses for all of these samples, and you should be able to use these maps to locate the samples.

Bruce and I are in the process of generating computer plots of sample locations to check against the manual plots. I am also working on a preliminary 1:20 000 geology base map and Bruce hopes that soon he will be able to produce element distribution plots. We hope to Open File some of this material (geology base, sample locations, and Au, Ag, Cu, Mo, As, and Sb plots) as soon as we can. We will send copies when they are available.

I noticed that you had some favourable drill results on the West Zone. I still hope to be in the area in early September with Jack Henderson (structural geologist) and his wife.

Very best regards.

Sincerely,

R.V. Kirkham
