

Notes - Soil samples appear to be well taken on these lines.  
 - Distances are slope distances and not corrected.  
 - Feldspar porphyry appears to follow schistosity as irregular sills? It locally crosses schistosity and narrows to near thin stringers.

Note.  
 The road stations appear to be marked differently from numbers shown on this sketch.

- Feldspar Porphyry.
- Quartz.
- Quartz monzonite.
- Dark grey argillaceous rocks.
- Intrusive dikes.
- (47) Specimen No
