Dear Sir:

Re: ROCK, LAD and PIPE  
Mineral Claims

This will acknowledge receipt of your letter dated October 15, 1979 and the information contained therein pertaining to the above-referenced mineral claims.

Please be advised that we are not interested in this type of deposit area at the present time. We do, however, thank you for submitting the information to us, and we would be pleased to review any submittals you may have in the future.

Yours truly,

CYPRUS ANVIL MINING CORPORATION

J. G. Simpson  
Vice President, Exploration

880 ROCKHEIGHTS AVE.  
VICTORIA B. C.  
OCT. 15/79

Dear Sir,

Enclosed is information pertaining to several groups of mineral claims in the vicinity of the Carabin Mines 'gold property'.

The claim groups are held as joint property by Daniel and William Edward Blower, c/o 880 Rockheights Ave., Victoria B. C., V9A 6J6. The claims have been held by the present owners since 1975, while previous to that, several claim groups staked under the old mineral claim system on portions of the property had been held for a period of years by other owners.

We are interested in discussing the selling or optioning of these groups of claims and are prepared to show this property to interested mining companies. This initial circulation of information is being distributed to only a select number of the most active B. C. mining exploration companies.

Caro.  
Reph  
of Hendis, but we are  
interested in this type  
deposit area at the present  
time etc etc

yours truly,  
Dan Blower

ROCK, LAD AND PIPE MINERAL CLAIMS

The ROCK, LAD and PIPE mineral claim groups are located adjacent to the east of the Carolin Mines gold property in the Ladner Creek area of the New Westminster Mining Division (see attached Mineral Claim Map). A total of 47 legally located and recorded units comprise the claim groups (ROCK 20 units; LAD 15 units; PIPE 12 units), although portions of several units, totalling approximately 3 units in area, are on ground shown held in good standing by Carolin Mines.

Much of the property involves rugged terrain, although access to the southwest corner and along the eastern side is relatively good via logging roads stemming from the main Coquihalla River road (see attached topographic map). Trail access is available to the northwest corner via the old Pipestem Mine trail and the abandoned Pipestem wagon road. The old Pipestem Gold Mine is located on the northwestern edge of the property.

Mineralization and evidence of secondary oxidation is widespread throughout the claim groups although only a limited number of surface rock grab samples have at present been assayed for mineral content. The samples assayed were taken from a variety of random locations on the property and are not tied to a survey grid. The samples were assayed only for the presence of silver and/or gold values. Definable gold mineralization was present in most of the rock samples assayed although values are low (see attached Certificates of Analysis). However, as no geochemical or geophysical surveys have yet been undertaken on the property, and in view of the widespread surface mineral occurrences, the potential of the property has not been significantly tested.
