reveals magnetite mineralization in Hole No. 1 from 64 to 500 feet; magnetite from 77 to 386 feet and hematite from 386 to 472 feet in Hole No. 2; and magnetite from 70 to 108 feet and hematite from 108 to 405 feet in Hole No. 3.

As soon as spring break-up permits a bulldozer will strip the overburden from copper sulphite showings, a mile west of the present drilling, and for the second stage of the prepare a series of drill sites program.

## Coin

Exploratory work is being carried out at three silver prospects held by Coin Explorations Ltd., of Osoyoos, reports R. E. C. Richards, president.

Crews are now engaged in geological studies and interpretations of two properties in the Slocan area, as recommended by J. A. Mitchell, consulting engineer. Diamond drilling will be started soon on the Triune property in the state of Washington, which is being developed jointly with Iago Mines Ltd.

Coin Explorations Ltd. was

recently converted from a private to a public company.

## Cambri

Consulting geologist E. P. Sheppard reports that drilling is continuing to block out the orebody of Cambri Mining & Development's Starr molybdenum property at Tonasket, Wash. He said ore reserves calculated from results of drilling so far and previous underground sampling indicates 1.5 million tons of 239 per cent proven and indicated and 500,000 tons possible or inferred at .172 per cent.

## Annis

A drilling program has been started at the Annis Mines near Sicamous to test high grade showings revealed by recent

trenching, tunnelling and short drill holes.

The first hole will be drilled to a depth of 800 feet through the areas where the trenching and tunnelling have shown values as high as 13.9 per cent lead, 4.3 per cent zinc, 4.3 oz. silver and 45 per cent copper.

A public "open house" will be held at the property on June 25 and a shareholders annual meeting will be held at 4 p.m.
