Mr. Donald W. Tully,
Cyprus Mines Corporation,
510 West Hastings Street,
Vancouver 2, British Columbia

Dear Mr. Tully,

I am sending you by registered mail, under separate cover, data which describes a number of mineral properties in the north Lardeau District.

There are eight groups, comprising 54 Crown-granted claims. One property of 9 claims, the Pipestem, covers the northern extension from Sunshine Lardeau Mine. Another of 15 claims, the Canadian, lies next to Nettie L Mine between it and Silver Cup Mine. A third, Wide West, of 8 claims and a fourth, Lost Chord (formerly named Big Five) of 5 claims just southeast of the Wide West are situated on the "Big Lime Dyke) Badshot Lime) on approximately the same horizon as is the Duncan Mine, although some miles to the northwest. A fifth group, the Alma of 9 claims is located on the narrower lime formation west of Badshot Lime upon which are situated the Black Bear, Surprise, Mollie Mac, White Quail, etc. A sixth, Glengarry, is a quartz or quartzite vein situated in Badshot Lime at the head of Boyd Creek. It is not far north of the Blue Jay property now held by Silver Standard. This is a persistent mineralized zone with one to two feet of high grade in a fifteen foot quartzite vein in which are disseminated some galena and some copper; of interest for its silver content. Groups seven and eight are five claims located close to but not part of some of the other larger groups named above.

When you have had an opportunity to appraise these properties I shall be interested in hearing from you.

Since I am sending you various original reports and papers which I cannot replace, I shall appreciate your consideration in the care of my material.

Yours very truly

Donald Humphrey
