camp Elm

July 16

- ① - 300(?) mottled grey ls. ? Amelinids  
Jts 55/65 NW
- ② - 50-100' Dol / Br weath
- ③ - Tbld brown lining atg. 135/78 SW  
In 11+ small gullies
- ④ - ~~holular~~ ls. of any eq. (?) than grey ls.
- ⑤ - 20' thin-bd atg 130/64 SW.
- ⑥ - red <sup>ls</sup> bed, then ls 20' (?) then grey atg. for 60'  
with color grading to grey ls atg.
- ⑦ - next to Dol member.
- ⑧ - then 60' Dol., then grey ls.
- ⑩ - 50' of Dol grading to <sup>20'</sup> atg. lumpy dol.  
1-2" beds 125/V

15' Skarn mostly garnet, mica diasp,  
much mt in places, also some py of  
Zn. Extends 100' SW, more diasp & Zn & 1%  
300' grey weath, in grey qtz with thin pyrrho-arg  
Members 125/50 SW, 125/52 SW

on flat ridge become more arg in 400', flattens

Grt 115/37 SW — Best Gp June 26/54

CE Thompson  
Tony Wehels

Hastings June 25/55

ca. 700' whi gte, then sl. vs 158/60 SW <sup>60</sup>/<sub>SE</sub>  
Felt in vs 118/60 NE

thin bdd silic arg with 2x repl of long brnts  
few ft. on crest of fold.

fold plunges NW: mod. 20°

20' arg, then 20' sh, 200+ bdd ch.

135/75 NE → 90/43 NE

TW M.C. #1 & #2 #2 parts ELL Thompson

Showing on Cr above camp July 17

Dump shows much pale gross, some bsp,  
also sp, minor gr pyrr, py of trace of  
cp. Local HF foci of banded spec.

Stain @ contact of L of arg. → ch  
member or downfold in sh. Much  
pale colored stain on other side

Stain traced with nmp for ca.  
50' up hill, with the same  
few 4 to 5 ft or so ca. 4 1/2  
2x or less. ? test for way

on NE side of hill thru gale above  
camp 200' ft displ. have  
~~the~~ 15 Dal → chert sequence  
of up to 10' stam @ Dal-ch  
contact - pale colored of fines  
grd than 1st show. diss. sp,  
cp, with much pyru, & some  
blue grey min. (2. quar moly.)  
1m garnet & diap. rock cutting  
across dal into Has & partly  
along beds. 1st min loc. 2ft  
weak diss. 3rd 10' diss min  
with local heavy sp & ~~sp~~ over  
3ft = 10% Zn 3% Cu.

Another showing 15 x 25' across  
str. 110° uphill & across fm. as repl  
of Dal @ contact. More massive  
matl. in several sections, otherwise  
Same as previous shows.

-then ca. 10'  $\phi$  show & many other  
stretches of min along contact  
which swings uphill. At crest of  
shoulder is show ca 5-6'  $\pm$  (variable)

In width of over 25-30' long, massive  
to meg pyrox, ca 30% Sp. 10-15% Zn.  
trace Cu. Best show so far

N62°E 117' from NE can. N. Fog. to  
Richter #4 #1 post. } 5300 = 31

Mar 16/54

Two or three small shows at head of  
valley, then large cut with 3-4'  
heavy cellular gossan.

- cut on 30' long min zone, ?  
3-4' wide with fair Zn in  
Bergamot & g near dips.

~~2-8% Zn. / also small shows below~~

July 18

show above camp 5' wide, fair Zn  
contents 10-15' then weaker

shows at dips of Hg. In ridge  
over top of ridge, traceable for  
over 1000' on SW side of rd to  
grading to stream, then arg.

coming down other side, get  
zone of dips with some Sp, Pyrox  
grading into granular garnet

zone, ~~then~~ up to 5' wide, then  
further along into cuts over 500'  
dist in which is ~20' of almost  
massive  $S^c$  are exposed,  
chiefly pyro, & py with some  
richer sediment sp  $\rightarrow$  15% Zn  
of minor Cp. In some patches  
have more gn than cent before  
All so far has been uneconomic
