

812116

May 24th, 1972,

Mr. H. Offers,
P.O. Box 3245,
Vancouver 3, B.C.

Dear Henk:

I enclose with this letter a report by Robert W. Nusbaum concerning his examination of your Penrock Prospect.

Also enclosed is a copy of his time sheet showing the five days he spent mobilizing, examining and demobilizing from the Rock Creek Area. A copy of his expense account is also attached.

In summary, Mr. Nusbaum spent five days on the Penrock examination:

- 5 days at \$70/day	-	\$ 350.00
- Expenses	-	112.16
- Geochemical Analysis (3 samples)	-	<u>8.77</u>
Total		\$ 470.93

Yours truly,

DYNASTY EXPLORATIONS LIMITED,

J. S. Brock,
Vice-President Exploration

JSB/mp
Encl.

Penroc Prospect	A. E. Aho J. S. Brock	
	ATTN. OF:	

SUMMARY

The Penroc prospect is underlain by unaltered volcanic rocks interbedded with sediments of greywacke and siltstone, none of which show signs of mineralization.

CONCLUSIONS

The prospect contains no potential for a base metal ore deposit.

RECOMMENDATIONS

No further work recommended.

INTRODUCTION

The Penroc prospect was brought to the attention of J. Brock by a "dowser" who claimed that he could locate metal deposits by looking at the surface of the land, topographic maps or aerial photographs. An area near Rock Creek, B.C. was outlined on an aerial photo by the "dowser" who claimed that it was underlain by a highgrade deposit of nickel, copper and molybdenite at a depth of 150 feet. One-half day was spent on November 3rd examining outcrops in the area.

LOCATION

The Penroc claim group is located about 5 miles southeast of Rock Creek, B.C., 2,00 feet north of the U.S.-Canada border. Longitude 118°53', Latitude 49°00'30", Penticton Map Sheet 82-E.

ACCESS

Access is 10 miles by paved Provincial Highway #3 from Rock Creek to Midway, a small lumber mill town, then 3 miles by an abandoned railroad grade and 1 mile by unimproved dirt road to the prospect. A four-wheel-drive vehicle is necessary if the road is not dry.

PROPERTY AND OWNERSHIP

The property consists of twenty claims; Hend, Araby 1-2, Margo 1-17, staked in 1970 by Leif Poulsen, #1-154 E 17th Street, North Vancouver, B.C.

TOPOGRAPHY

General relief is 1,400 feet ranging in elevation from 2,000 feet at Myers Creek to 3,400 feet on nearby summits, local relief is about 500 feet. The terrain is low rolling hills which have been glaciated and have only a thin cover of soil on the ridges. Vegetation consists of coarse grass and sage brush on south slopes, scrub pine and fir trees on north slopes. Outcrops are frequent except in the very bottoms of valleys.

HISTORY OF OCCURRENCE

New prospect.

GENERAL GEOLOGY

Rocks of the general area are volcanics with local interbedded shale and/or siltstone of the Cenozoic, Phoenix Volcanic Group according to the Geological Survey of Canada. Rocks on the property consist of fine grained, occasionally porphyritic volcanics, probably andesite, with interbedded sedimentary units of greywacke and siltstone. These units strike North 20° West and dip 30-40 degrees East. A dark grey, fine to medium grained diorite dike averaging a few feet wide strikes North 60° East across the prospect.

MINERALIZATION

No mineralization was seen on the prospect and none of the rock units showed signs of hydrothermal activity which might be indicative of the proximity of base metal ore deposit.

PENROC PROSPECT SAMPLES

- Penroc #1 Diorite dike, dark grey, medium to fine grained,
fresh, no obvious mineralization.
Geochem: Cu, Mo, Pb, Zn.
- Penroc #2 Volcanics, fine grained, occasionally
porphyritic, weathered, no hydrothermal
alteration, no obvious mineralization.
Geochem: Cu, Mo, Pb, Zn.
- Penroc #3 Sediments. Greywacke and siltstone.
Angular coarse fragments of feldspar, quartz
and biotite in fine grained matrix of same
material. Siltstone same only very fine
grained. No alteration or mineralization.
Geochem: Cu, Mo, Pb, Zn.
