## NEWS RELEASE

### Progress Report on the Silverknife Claims located in the Liard Mining Division in British Columbia

Progress on the Silverknife Claims in the 1985 exploration season resulted in the discovery of a steeply dipping silver, lead, zinc, gold and tin mineralized zone. This zone is striking in a 30° south west direction on our property, heading in the direction of our geochemical anomalies with an aggregate strike length of over 1.7 kilometers (1.2 miles). The mineralization in this zone is similar to Regional Resources' rich Silver Creek deposit (2.6 millions tonnes grading 13oz/ton silver and 18.5% combined lead/zinc).

Work consisted of 22 line-kilometers of soil sampling (13 miles); 2,344.7 meters (7,693 feet) of diamond drilling for a total of thirty holes, of which five holes were incomplete due to technical problems; electromagnetic surveying using a Scintrex SE 88 unit (Genie) for a total of 19 line-kilometers (11.4 miles).

According to Gary Medford's geological report dated December, 1985, "the potential for establishing a large tonnage silver, lead, zinc (plus gold and tin) deposit by extending the newly discovered high grade mineralization is excellent".

Negotiations with several interested major mining companies are presently taking place to further finance an aggressive exploration program this year.

Overleaf/Summary of drill targets.

### NEWS RELEASE

Reg Resources Corp. and Teryl Resources Corp. have jointly negotiated a 100% interest in thirty seven (37) claims located in the Pickle Lake area where Highland Crow Resources recently announced significant gold assays on its property. (See George Cross News Letter No. 244 - 19th December, 1985).

Details of the agreement will be announced when final documentation is completed.

Teryl Resources Corp. wishes to announce that 58,000 shares of Teryl were exercised from the 'B' warrants at \$.35 per share and 206,500 shares were exercised at \$.35 from the 'A' warrants to net Teryl Resources \$92,575.00

### NEWS RELEASE

Reg Resources Corp. and Teryl Resources Corp. wish to announce that the agreement to purchase forty two (42) claims located in the Estrades County, in the Casa Berardi gold area has been completed today. The agreement has been closed in escrow, subject to proof of title.

The terms are \$25,000 cash payment, 50,000 shares of Teryl Resources Corp. and 25,000 shares of Reg Resources Corp. with a 1½% net royalty interest.

Due to the fact that in 1975 a geophysical survey was carried out on this ground by a major company who located a geo-physical anomaly, drilling is anticipated early this year.

These claims are adjacent to the Cominco-Agnico claims group and are in the same district as the Golden Hope, Teck Group claims.

The agreement is subject to the approval of the regulatory bodies.

## NEWS RELEASE

Reg Resources Corp. wishes to announce that it is negotiating jointly with Teryl Resources Corp. to acquire an option on forty two (42) claims in the Casa-Berardi gold area. These claims are located in the Estrades TWSP. adjacent to the Cominco - Agnico Eagle Claims Group and in the same district as the Golden Hope, Teck, Golden Group claims.

These claims are subject to completion of certain documentation and subject to regulatory bodies approval.

Also Reg Resources Corp. has completed a flow through private placement at .90¢ per share to raise \$38,700.00 for 1985 tax benefits.

Ray expects LME prices to end 1986 at around 100 pence per pound. Average price during the year will be 100 pence taking into account both the fact that Alcan's premium to spot prices, and also the fact that Alcan's prices tend to lag spot prices, Alcan's average ingot price will be about 55 cents in 1986. Ray's recommendation is to 'buy' on weakness.

REGIONAL RESOURCES - 3.55, CANAMAX - 4.35 &  
REG RESOURCES - 61 CENTS

Regional Resources is proposing a reorganization. The Company's exploration properties, which are all multi-metal prospects in the Yukon-Northwest British Columbia area, will be placed in a new Company to be called Fairfield Minerals Ltd. Regional's 51 pct interest in the Midway silver-zinc-lead prospect in Northwest B.C. will stay in Regional, and will remain the company's major asset. Fairfield will conduct a public financing to raise at least 1.5 million dollars for further work on its properties.

Ray sees the proposed reorganization as a reflection of John Stollery's desire to stay in the exploration business, rather than becoming involved with an operating mine. (Mr. Stollery, largely responsible for the Midway discovery, is currently President of Regional and, if the reorganization is consummated, will become President of Fairfield). From a different perspective, the proposed reorganization reflects Mineral Resources' confidence in the Midway project (it owns 82 pct of Nanisivik Mines which is, in turn, the principal shareholder of Regional). The proposed reorganization contemplates the appointment of Graham Farquharson as President of Regional. (Mr. Farquharson is the mining engineer who made such a success of Mineral Resources' Nanisivik mine).

Ray finds it hard to get excited about the shares of Regional Resources. The shares will henceforth lack speculative interest as a result of exploration on other properties. Furthermore, shares representing properties in the pre-production stage tend to languish on the market. Ray, therefore, has two suggestions for those holding the shares of Regional Resources - One would be to switch to the shares of Canamax Resources in order to maintain an interest in the Midway project but with exposure to a broad range of other exploration projects. Another would be to switch to Reg Resources in order to gain a more leveraged exposure to the exploration potential of the Midway property itself. (Reg has discovered an interesting silver-zinc-lead occurrence immediately adjacent to Midway.)

Ray referred us to yesterday afternoon's newswire on Bruneau and Canamax as an example of Canamax's exploration exposure. In that newswire, Canamax reported 3 intersections, one in each of 3 drill-holes at its Clavos gold property: 6.6 feet of 0.15 oz-ton; 9.8 feet of 0.29 oz-ton and 124.6 feet of 0.14 oz-ton (including 26.2 feet of 0.54 oz-ton).

## NEWS RELEASE

Reg Resources Corp. has arranged, subject to regulatory bodies approval, a private placement of 200,000 units at \$1.00 per unit (Flow Through Shares), comprising of one share and one warrant, exerciseable for 180 days to buy one share at \$1.25.

Proceeds of the private placement will be spent on Reg Resources' claims located in the Midway area of British Columbia this year.

Drilling is continuing on the Silverknife claims.

## Progress Report on the Silverknife Claims as of 30th October, 1985

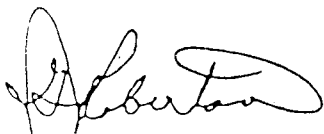

The following summary of the best of the silver-bearing intersections from hole #16 through hole #22 are as follows:

<u>Hole #</u>	<u>Footage</u>	<u>Length</u>	<u>Silver oz/ton</u>	<u>Gold oz/ton</u>	<u>Lead %</u>	<u>Zinc %</u>
#16	134.2' - 140.0'	5.8'	8.30	.008	3.80	5.00
	159.6' - 165.5'	5.9'	19.20	.006	13.70	3.70
#17	188.3' - 193.2'	4.9'	7.50	.001	12.25	2.10
#18	224.7' - 231.6'	6.9'	10.90	.011	3.80	4.80
	239.4' - 243.0'	3.6'	14.90	.006	3.50	4.60
#19	74' - 79'	5.0'	5.83	.001	4.21	1.95
	79' - 81.8'	2.8'	7.35	.001	4.77	1.00
#20	98.5' - 102.5'	4.0'	8.49	.002	1.21	3.89
	102.5' - 112.3'	9.8'	4.14	.001	0.32	1.50
	112.3' - 116.0'	3.7'	21.87	.001	9.25	18.90
#21	28' - 30'	2.0'	36.31	.021	12.80	9.40
	30' - 32'	2.0'	67.37	.018	30.50	12.00
	32' - 42'	10.0'	20.18	.011	5.68	5.60
#22	218.0' - 220.0'	2.0'	36.75	.006	45.80	9.10
	281.0' - 285.5'	4.4'	2.95	.001	2.29	6.74
	289.7' - 292.3'	3.6'	11.55	.001	15.00	2.09

These intersections represent at least three mineralized zones of approximate dimensions 150' x 250'. The most significant zone is approximately 15' thick.

Drilling is continuing to extend these zones which are open in all directions.

## PROGRESS REPORT ON THE SILVERKNIFE CLAIMS

Reg Resources Corp. wishes to announce that following a detailed geophysical survey by Noranda Explorations on the Silverknife claims, located adjacent to Regional Resources' Midway and Silver Creek lead, zinc, silver discovery (six million tons - 11.7oz silver and 18% lead/zinc combined), the second phase of drilling has commenced.

According to Gary Medford, Consulting Geologist - "Detailed geochemical sampling completed during the last month following thawing of the ground indicates that all holes in which significant visible mineralization has been found are located at the periphery of a silver, lead, zinc anomaly which is open to the west. An aggressive geochemical sampling program is now underway to test several kilometers of potentially favourable ground. Diamond drilling continues with the benefit of complimentary geochemical and geophysical information which has generated a large number of targets yet to be tested." Further drilling is to continue throughout the fall this year.

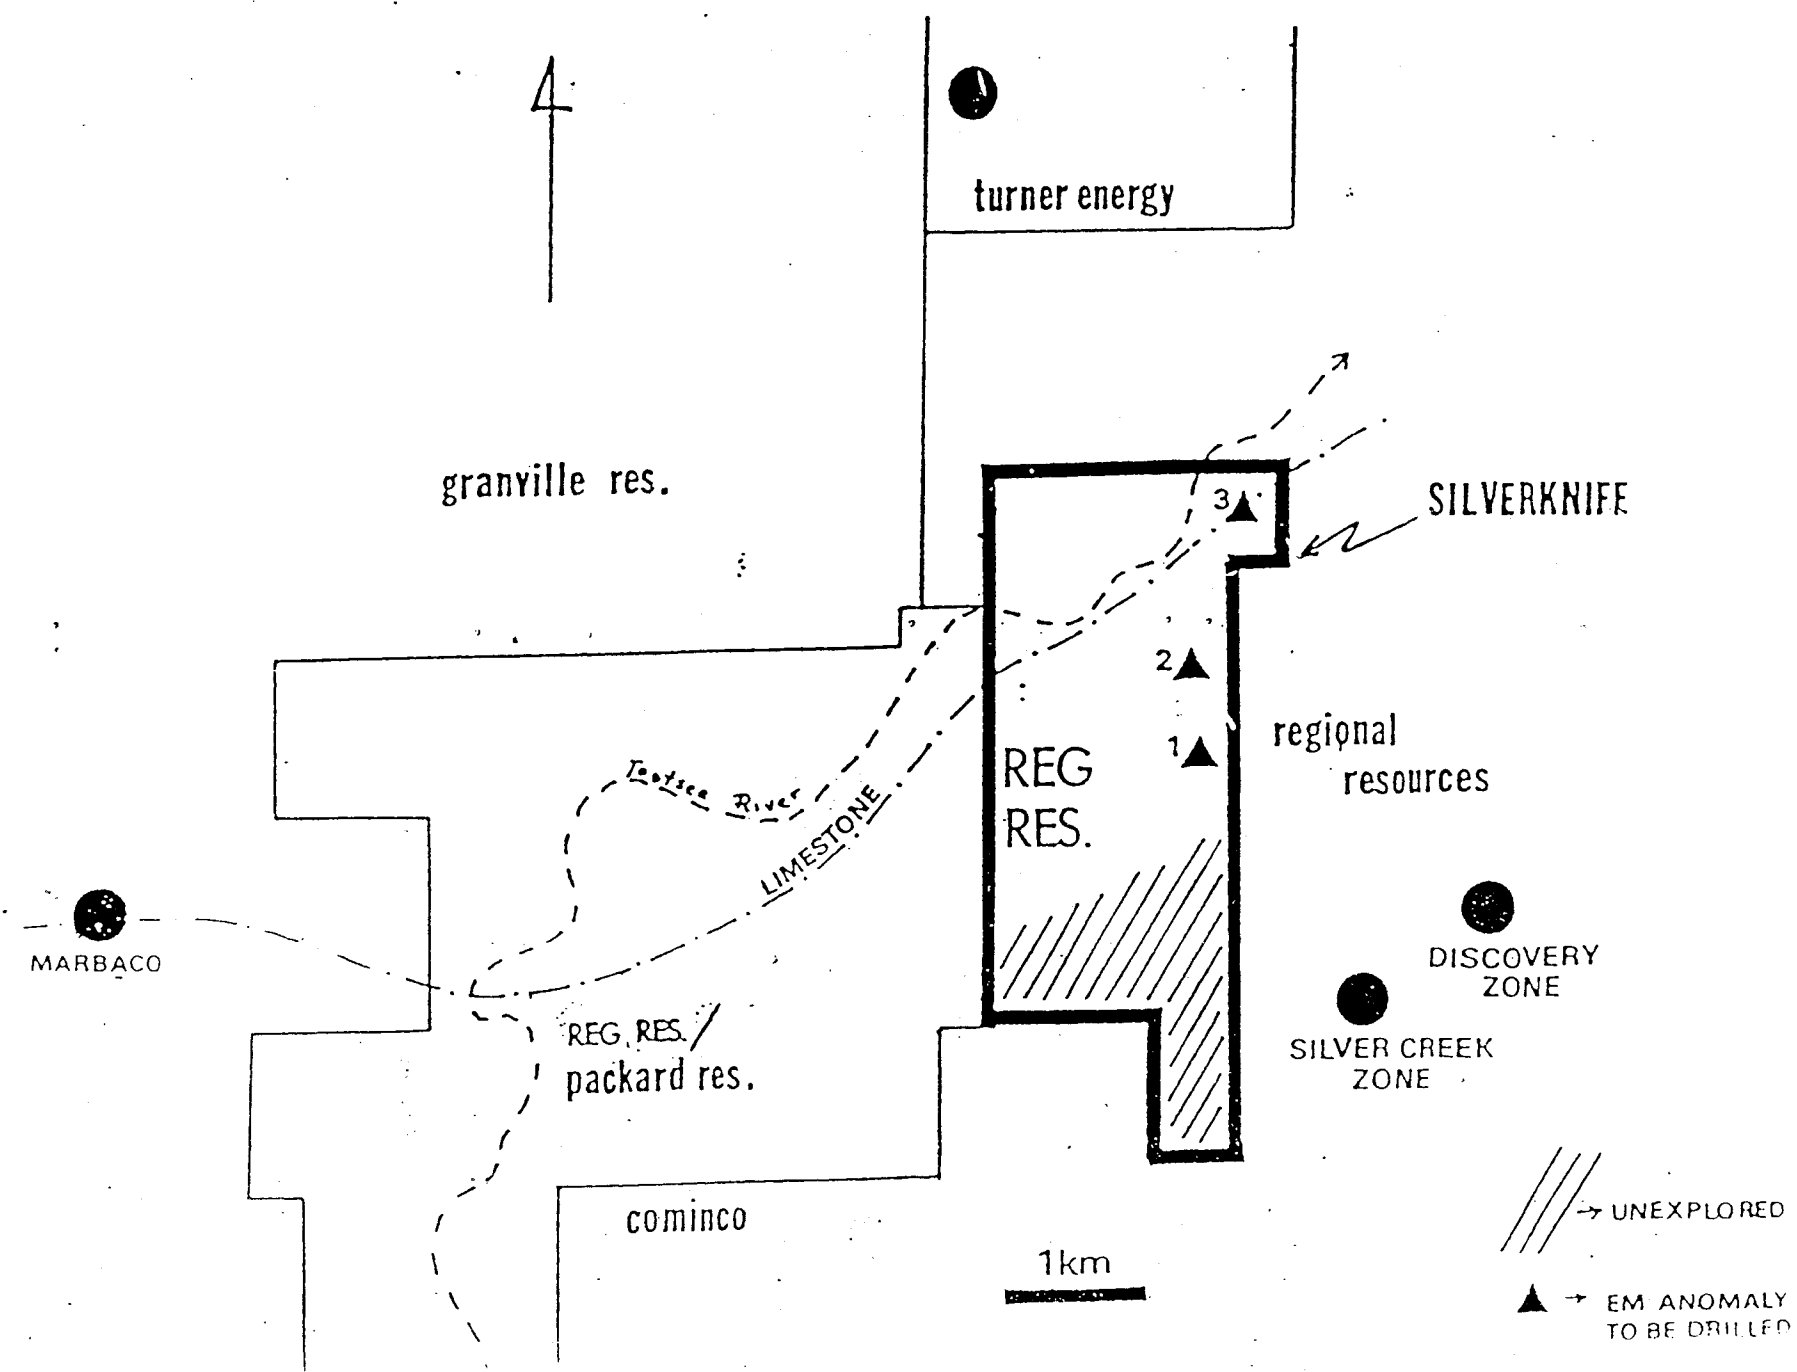

Reg Resources Corp. has received approval on the equity financing from the regulatory bodies to raise approximately \$200,000.

ON BEHALF OF THE BOARD

John G Robertson

## NEWS RELEASE

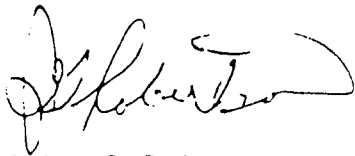

Re: Liard Mining Division, British Columbia

Reg Resources Corp. wishes to announce that a new drilling contract has been entered into with Phil's Diamond Drilling Ltd. (1,500'). The drilling is to commence the first week in August, 1985.

Several new drilling targets have been located as a result of a successful geophysical survey recently completed by Noranda Exploration on behalf of Reg Resources on the Silverknife claims (36 units), Silvercup and Silverspoon claims (102 units) and the AG and Fly claims (52 units). Reg Resources may earn a 100% interest subject to a 20% net profits in the Silverknife claims, a 51% interest in the Silvercup and Silverspoon claims and a 50% interest in the AG and Fly claims.

Reg Resources will fund the projects by receiving \$126,000 by way of a previously approved flow through share agreement with certain private investors. Also, additional equity financing has been successfully negotiated to raise \$300,000 (subject to the price of the shares when approved)

ON BEHALF OF THE BOARD

John G. Robertson  
President

# RICHARDSON GREENSHIELDS & CANADA LIMITED

GEORGE T. RICHARDSON, CHAIRMAN

TORONTO RESEARCH DEPARTMENT, 130 ADELAIDE STREET WEST, TORONTO, ONTARIO M5H 1T8 (416) 860-3400

REG RESOURCES - 1.20 BY: RAY GOLDIE, MINING ANALYST - JUNE 28/85

This stock, which has spent most of 1985 in the 35 to 50 cent range, has been strong recently. Ray thinks we'll see it even stronger over the next few days.

Reg has a well-located property in northern British Columbia, immediately to the west of the Regional Resources-Canamax Midway property. The eastern border of Reg's ground is about 1.3 kilometres west of Regional's impressive Silver Creek silver-zinc-lead discovery.

Horanda has carried out a geophysical survey for Reg, at cost, in return for a 30 day right of first refusal. Reg is funding, (from flow-through shares), a program of drilling to test the targets found by this survey. Although assays are not yet available, Reg reports having found visual indications of zinc and lead mineralization. The host rocks are Cambrian limestones, i.e. the same type of rock as those of Midway, but older.

Reg has some good technical people - they're readily available in B.C. these days - but does not have a management group with long experience in, and dedication to, mining. Therefore, Ray does not recommend purchase of Reg by investors looking for a solid exploration team with good long term potential (ie. Reg is not another Granges or Canamax). Nevertheless, speculators in search of a good property 'play' should take a look.

Reg's discovery of zinc and lead west of, and in different rocks from those at Midway, make the huge Midway property itself more exciting. Reg's discovery enhances the possibility that Regional and Canamax have discovered at Midway, not a new mine, but a new mining district.

JULY 9/85

In the Midway area of Northern British Columbia, Regional Resources and Canamax Resources are working on a silver-zinc-lead deposit which will probably become a producing mine before the end of the decade. Regional has a 50% interest in the project and Canamax a 24.5% interest. Regional Resources' geologists originally thought that Midway-type mineralization might be confined to rocks of a certain age (Devonian). However, more detailed work suggests that the age of the rocks is not as important as the coincidence of favorable chemical compositions with favorable structures. This re-interpretation fits in nicely with recent discoveries elsewhere in the Midway area. Butler Mountain Minerals (BMM-V) and, more recently, Reg Resources (RRE-V) have found precious-metal and lead-zinc mineralization in rocks older than those which host Midway. This summer, both Butler Mountain and Reg are drilling targets located by geophysics. In Butler Mountain's case, the size of the program will depend on the success of a contemplated sale of up to \$2 million worth of shares and warrants. Another interesting "play" in the area is Packard Resources (PAD-V) which has optioned ground to Reg.

(over)

REG RESOURCES - 0.99

On July 9, Reg Resources announced results from hole number 2 at its northern B.C. property immediately west of the Midway property of Regional Resources and Canamax Resources. The hole intersected mineralized zones between 175 feet and 300 feet, including 13.5 feet grading 7.9 ounces per tonne silver, 4.4 pct lead and 3.2 pct zinc. The status of Reg's program so far is:  
Hole number 1: Minor zinc in last 20 feet of 400 foot hole. Hole number 2: As noted above. Hole number 3: No significant

mineralization. Hole number 4: Strong visible silver-zinc-lead mineralization from 191 feet 265 feet. Hole stopped by a cavity which bent the rods. Hope to restart the hole later this week.

The company plans 3 or 4 more holes. Ray Goldie continues to like this "play" and notes that the mineralization is shallower (so, probably, easier to mine) than at Midway.

REG RESOURCES CORP. - RRE  
PACKARD RESOURCES LTD. - PAD  
INTERNATIONAL MEGALINE RESOURCES LTD. - IMG

PRESS RELEASE

May 29, 1985

Reg Resources Corp. (Reg) has optioned 103 units covering 6,300 acres adjacent to its Silverknife holdings in northern British Columbia from the joint venture of Packard Resources Ltd. (Packard) (75%) and International Megaline Resources Ltd. (Megaline) (25%). This strategic land holding lies between the known deposits of Harbaco and Regional Resources: 140,000 tons grading 10.7 oz/ton silver and 8.84% combined lead/zinc and 6 million tons grading 11.7 oz/ton silver and 18% combined lead/zinc, respectively. By completing a minimum of \$250,000 of exploration by December 1987, Reg will earn a 51% working interest in the property, provided that \$50,000 of the work is completed by December 1985 and an additional \$100,000 by December, 1986.

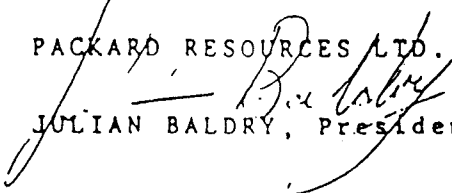

Geochemical sampling completed by Packard and Megaline discovered three anomalous zones, one of which is ready to test by drilling. In addition, favourable stratigraphy exists as noted by Dr. Gary Medford, FGAC, in a 1984 report: "Packard's claims cover geological formations which are the extension of those found on Regional Resources' ground, as well as those which host the significant Harbaco deposit on the western boundary of the claim group". More recently, geophysical work completed by Noranda crews on Reg's behalf indicate that a favourable host limestone traverses the four kilometre width of Packard's claims.

Reg Resources will raise \$273,000 via a private placement that was approved on May 24th, 1985. Work is scheduled to start on Packard's property in early June and will include testing of at least one of the anomalies by drilling.

## NEWS RELEASE

According to G.A. Medford, Ph.D, FGAC, Geological Exploration Consultant, of Vancouver, B.C., "the electromagnetic survey carried out by a Noranda geophysical crew on the Silverknife claims in early May, 1985, on behalf of Reg Resources Corp., has resulted in the discovery of a third anomaly in addition to the two anomalies located during the 1984 field season. This anomaly is believed to be located in the limestone that hosts the Marbaco deposit (140,000 tons containing 10.7 oz/ton silver, 2.84% lead, 6.03% zinc). This horizon also has excellent potential for hosting a Regional Resources style ore body (6 million tons, grading 11.7 oz/ton silver and 18% combined lead/zinc)."

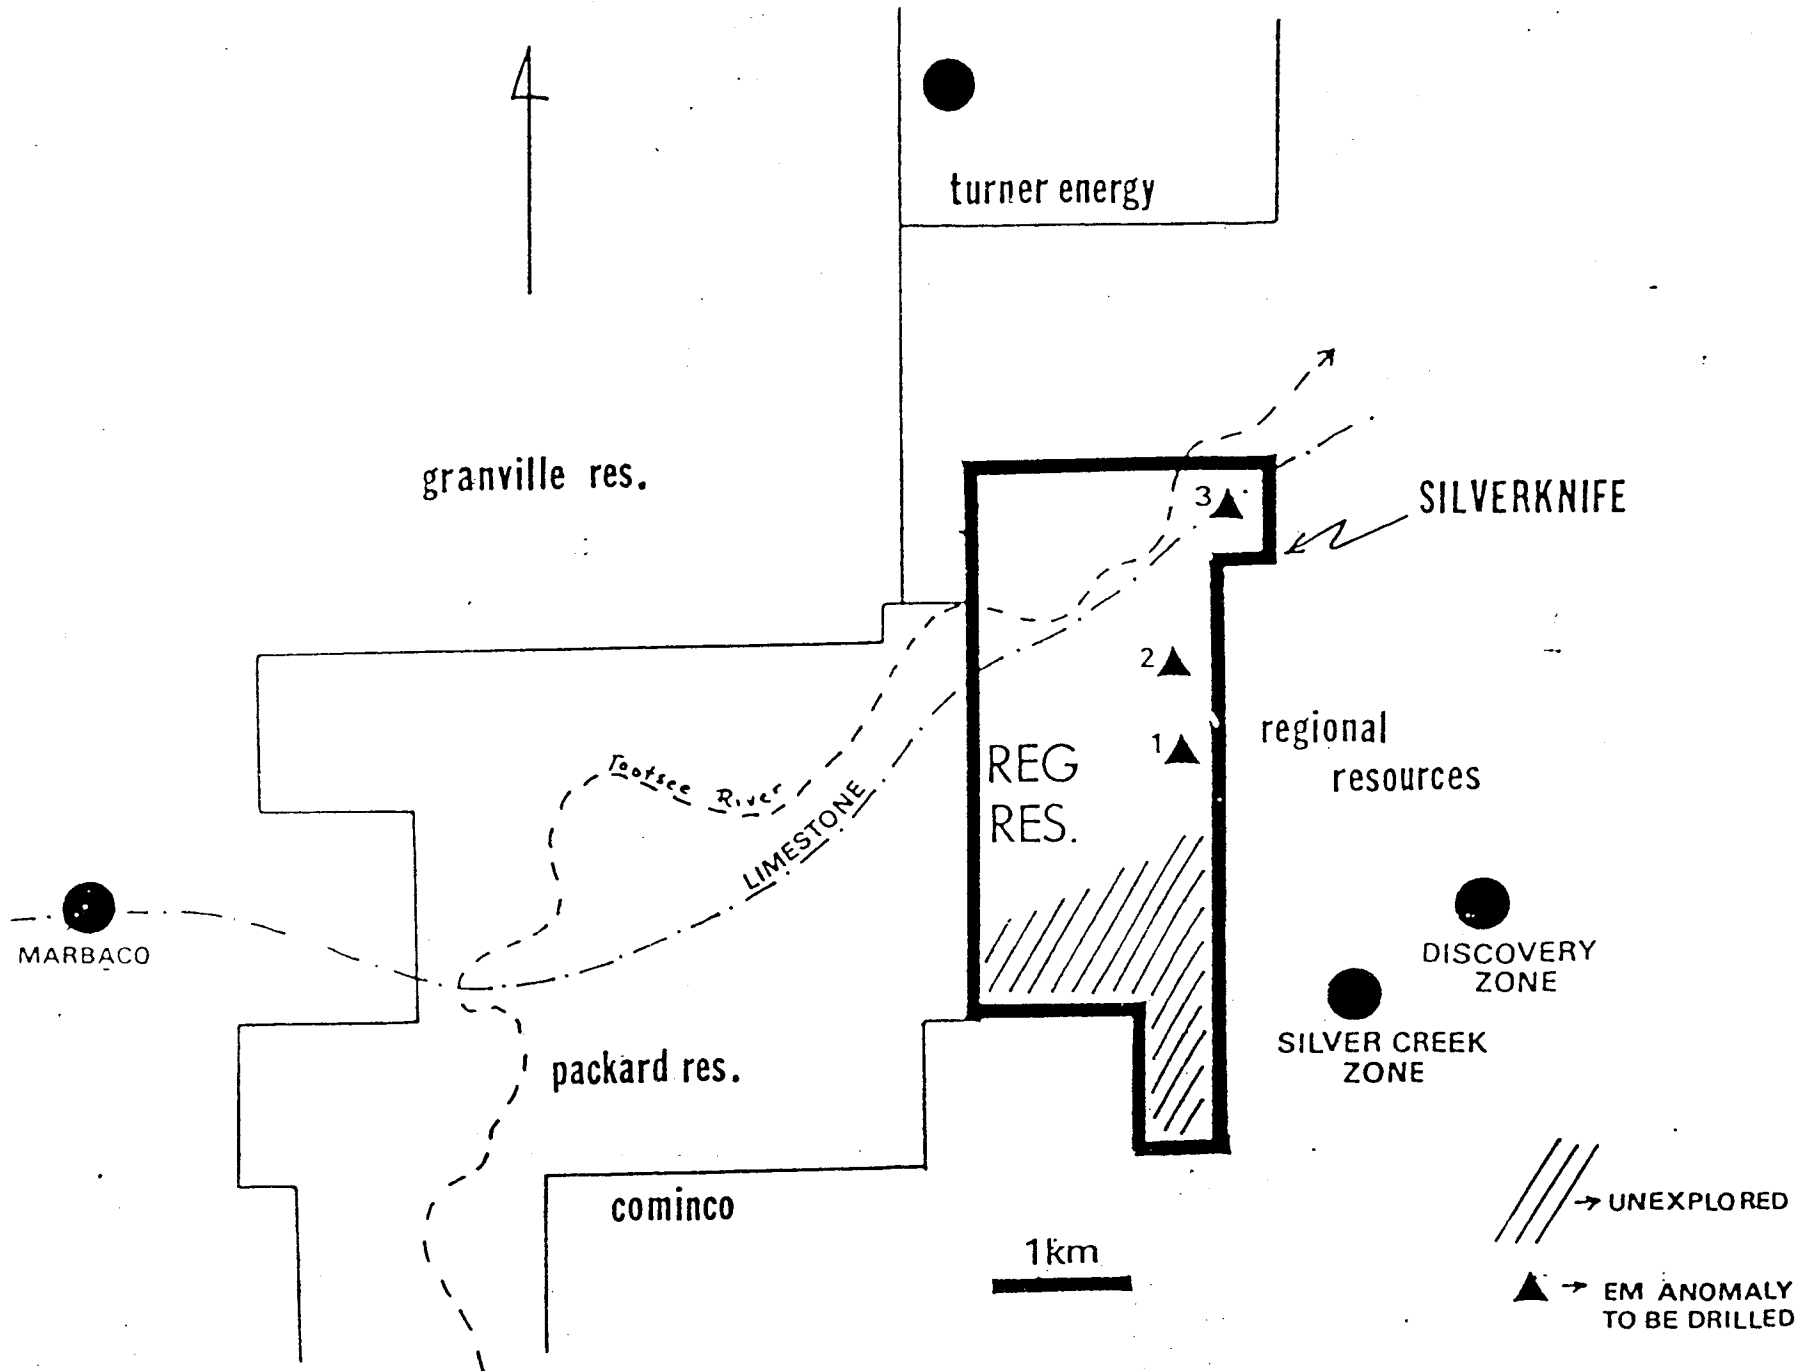

The area on the south part of the Silverknife claims could not be explored due to steep terrain and avalanche conditions, but will be subject to detailed E.M. surveying later in the summer.

Drilling on the aforementioned anomalies is to commence on the 7th day of June, 1985.

ON BEHALF OF THE BOARD

## NEWS RELEASE

Reg Resources Corp. wishes to announce that it has arranged for a private placement of \$270,000.00 subject to finalization of documentation and receipt of regulatory bodies approval.

Reg Resources will issue 202,000 treasury shares at \$.40¢ to raise \$81,000.00 for working capital and 252,000 treasury shares at \$.75¢ to raise \$189,000.00. These funds are to be used exclusively on the Reg Resources mining properties for exploration and development work.

The shares will carry 202,000 warrants and 252,000 warrants respectively which will enable the investors to purchase 202,000 additional shares at \$.50¢ per share and 252,000 additional treasury shares at \$.90¢ per share within one year.

Reg Resources Corp. will commence an early exploration program on the Silverknife claims (see attached map) this spring which will consist of geophysical work and drilling. Results obtained last year by Peter Christopher & Associates revealed a 4000' anomaly.

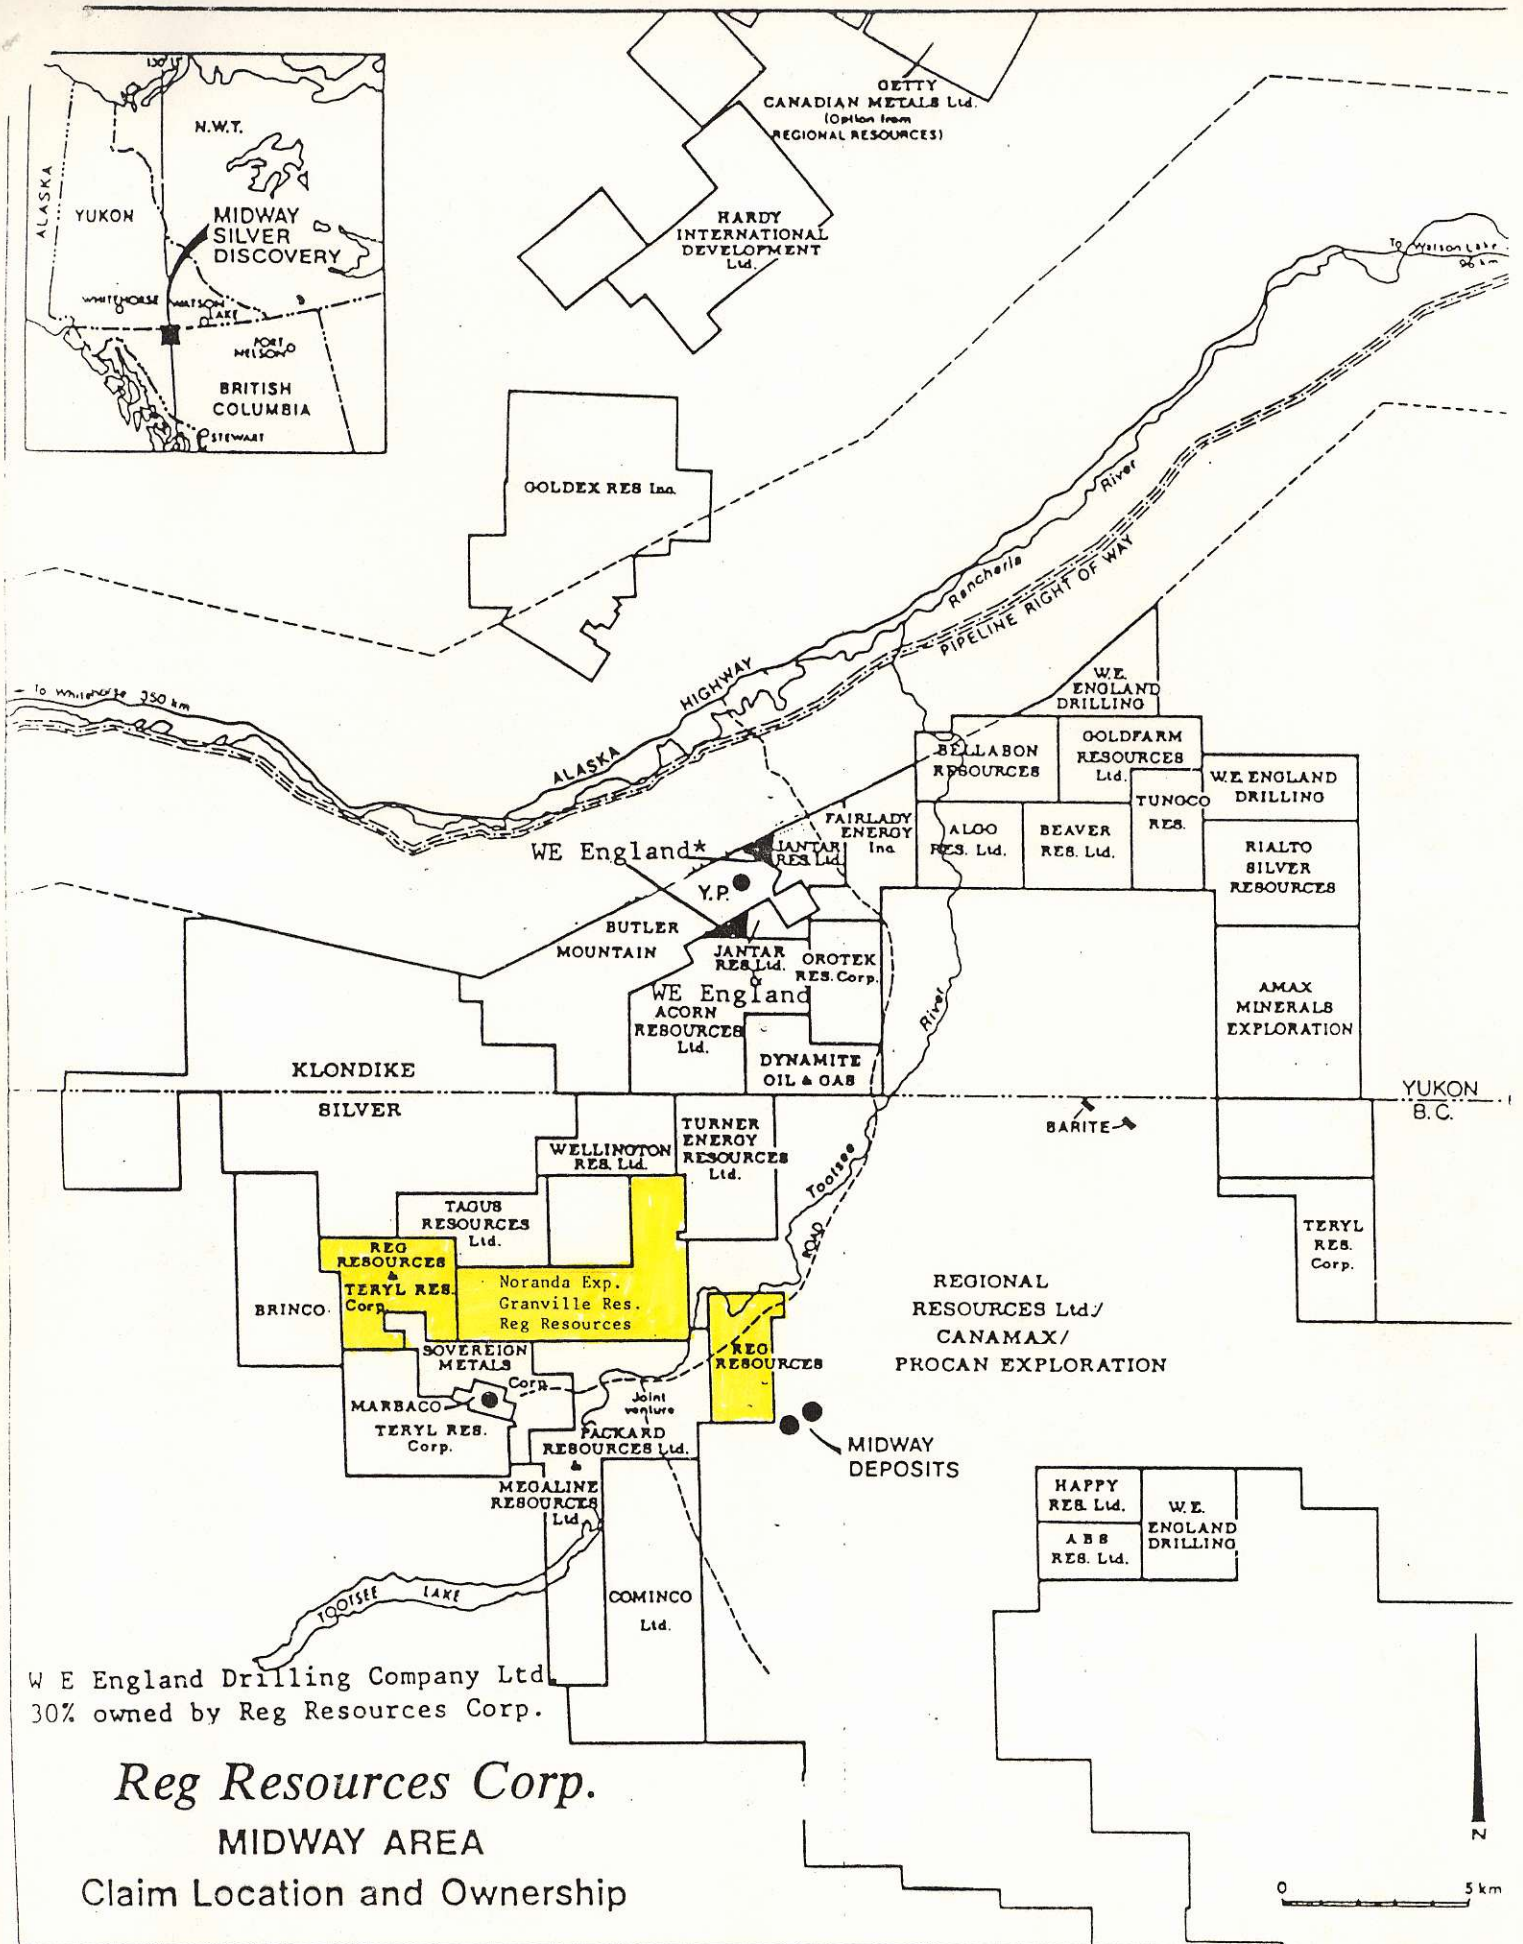

The Silverknife claims are located in the Liard Mining Division in British Columbia and are adjacent to Regional Resources' "Midway" discovery which consists of an estimated six million tons of 11.7oz silver and 18% combined lead/zinc.

## NEWS RELEASE

Reg Resources Corp. wishes to announce that the company has sold a 25% interest in its interest in three producing oil and gas wells located in Sabine County, Texas for \$70,000.00 CDN to Granville Resources, Inc.

Reg Resources still retains a 2.25% working interest in these three wells and owns a 3% working interest in five additional successful oil and gas wells, also located in Sabine County, Texas.

Additional drilling in Sabine County is expected shortly according to our operator.

## REG RESOURCES CORP. - PRESIDENT'S REPORT FOR 1984

Dear Shareholders,

Reg Resources Corp. has achieved a cash flow from its interest in three oil and gas wells located in Sabine County, Texas.

Since October 1984, Reg Resources has received \$30,000.00 (US) to date. Five more wells are planned to be on stream shortly, and three more wells are in the process of being drilled.

Reg Resources' oil and gas property is located eight miles from the Many-Pendleton Field which has 513 oil and gas wells producing, and has produced over twenty-seven million barrels of oil according to our operator in Texas.

The management of Reg Resources will be planning its exploration programs in the early part of next year, on the Silver Knife claims. These claims are located 300 meters (1500') from Regional Resources' "Midway" orebody, on which reserves of 6,800,000 tons, averaging 13.2 ounces of silver and 20% lead, zinc combined, have been found.

Progress on the Silver Knife claims to date has revealed an anomaly approximately 4000' long and drilling targets have been located by using a sophisticated electromagnetic survey.

The Fly and AG claims are located 10 kms (6 miles) west of Regional's "Midway" discovery; additional work is planned in 1985. An anomaly, 1000 meters by 500 meters, was located by work carried out this year with geochemical assays up to 74 parts per million found in the soils for silver.

The Jan and Feb group are located 10 kms. (6 miles) south of the Rea Gold/Falconbridge, Adams Lake property located near Kamloops, British Columbia. The Rea Gold property has a massive sulphide gold prospect being explored by Falconbridge. On our Jan and Feb group, several anomalies were located using an electromagnetic and magnetometer survey this year.

In conclusion, all Reg Resources' properties are located near exciting new finds and our cash flow from the oil and gas interest in Texas has been most encouraging to date.

The management of Reg Resources Corp. wishes all its shareholders a Happy and Prosperous New Year.

On Behalf of the Board,

John G Robertson  
President

## NEWS RELEASE

Reg Resources Corp. is pleased to announce that a geochemical and geophysical report on the Fly and AG claims, located in the Tootsie River Area, Liard Mining Division, B.C., has been received from Peter Christopher, P.Eng. this week.

These claims, (50 units) are 100% owned by Reg Resources Corp, based on a joint venture agreement.

The Fly and AG claims are located ten kilometers west of Regional Resources' silver/lead/zinc orebody on the Midway property. Regional Resources has reserves of 6.7 million tons, grading 13.12 oz. silver, 11.12% zinc, 8.84% lead (Northern Miner - 9th August, 1984).

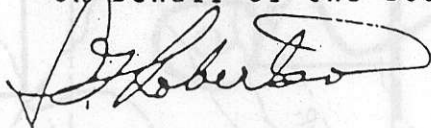

A geochemical and geophysical program was conducted during the month of August, 1984 to explore a silver/lead/zinc anomaly found during the 1983 prospecting program. A total of 105 soil and 4 rock samples were collected along chained and flagged lines. Over 25% of the samples collected were anomalous in silver/lead/zinc, with values in soils of up to 74 ppm silver, 1850 ppm lead and 4700 ppm zinc.

A strong positive correlation exists for the three elements. A northeast trending anomalous zone, over 500 meters wide and 1000 meters long, was delineated. Trenching and further geophysical testing and drilling is now recommended by Peter Christopher, P.Eng.

Reg Resources Corp. has negotiated for an interest in the Loot, Boot, Root and Road Claims (54 units) as to a 24.5% working interest. These claims are presently owned by Noranda Exploration and were optioned to two public companies. These claims are adjacent to the Turner Energy and Resources' ground to the north (Sue 1 & 2) and to Regional Resources' ground to the east, which are also located in the Liard Mining Division. Details of the negotiations will be released shortly, subject to regulatory bodies approval.

Directors options in the amount of 24,000 shares were approved by the directors and shareholders of Reg Resources at .35¢ per share to Susanne M Robertson.

## NEWS RELEASE

Reg Resources is pleased to announce that a total of 67 kms of an aerial EM and Magnetometer survey has been completed by Dighem Limited of Toronto. The survey has outlined several discrete bedrock anomalies ranging in length from 250 meters to 700 meters long. Dighem's report on these anomalies recommend further investigation using appropriate surface exploration techniques.

The claims are located 10 kms north-east of the Rea Gold Corp. gold discovery, presently being drilled by Falconbridge Corp. The Jan Group (36 units) are contiguous to Utah Mines Claims to the south and are contiguous to Comincos Claims to the west.

Preliminary discussions have been held with a major mining company to explore and develop the Jan & Feb Group Claims. A decision will be made shortly after the major mining company conducts a property examination.

On Behalf of the Board,

John G. Robertson  
General Manager

## Reg Resources combines oil and gas, mineral properties, and tour company

VANCOUVER, British Columbia — Reg Resources, a young, rapidly growing resource company actively pursuing a number of mineral and petroleum projects in the U.S. and Canada, has three separate departments of operations. Two are traditional to junior exploration companies: oil and gas interests, and mineral properties. The third de-

partment, tour operations, sets Reg apart from the rest of the resources crowd.

In February 1984, Reg signed an option to acquire Mainstream Tours, a well-established U.S. wholesale tour operator with packages covering many of the major U.S. cities. Mainstream has been in operation for nine years, and has gained a

national reputation for its quality tour packages which are sold through retail travel agents and airlines. Reg expects to inject additional working capital into the operation and expand marketing efforts to gain a larger share of the market, which, after several years of stagnation, is expected to grow

Located in the Greenwood Mining Division of British Columbia, Reg Resources Corp.'s Ivan property consists of two contiguous claims in an area where active mining and exploration has been carried out since the 1890's. The property is just one of Reg's holdings in the North American gold mining industry.

For further information contact: Reg Resources, #216-8055 Anderson Rd.,

Symbol: RRE-V

substantially over the next few years.

Reg's entry into this market was prompted by the cash flow aspects of the business, and the potential for substantial growth with proper financing.

In March 1984, Reg acquired an option on a five percent working interest (3.65 percent net revenue interest) in a 10,741 acre oil and gas property located in Sabine County, Texas. The property has two completed gas wells which should be connected to a pipeline by June 1984, and are expected to produce one million cubic feet of gas per day, which will be sold to the pipeline for \$3.15 per thousand feet (mcf). Seven more gas wells as expected to be drilled in 1984.

Revenues in 1985 to Reg from the existing wells, plus those which are expected to be successful from the seven wells to be drilled this year, are projected by the company's petroleum geologists at \$300,000. In March 1984, an oil well was completed on the property to depth of 6,100 feet, and should produce an average of 102 barrels of oil per day and 100 mcf of gas per day when the pipeline, which is being built now, is completed. This well can be drilled on 80-acre spacing. Production from this well alone will provide Reg with a cash flow of \$30,000 to \$40,000 annually. Reg's operations in the oil and gas area are being headed by Jack Abrams, vice president, a 30-year veteran of the oil business and a founder of Amalgamated Bonanza Petroleum which later merged into Gulf Canada.

Reg holds a number of promising mineral properties in British Columbia, all situated near significant discoveries made by other companies. The Fly Mineral claims comprise a total of 50 units (2,582 acres) some 10 kilometers west of the Midway property owned by Regional Resources Ltd. on the British Columbia/Yukon border. Exploration funds budgeted on the Midway prop-

erty amount to \$34.25 million for 1984, and already approximately 43 million tons of reserves averaging 12.3 ounces of silver per ton, 12 percent zinc, and 6.1 percent lead are estimated. This ore body has a value at current metals prices of more than \$750 million, and Reg is optimistic that similar mineralization occurs on the Fly Mineral claims.

The AG claims comprise two units and are surrounded by the Fly claims. Reg holds a 90 percent net profits interest in the property. Work done in 1979 by Dupont produced some very high silver/lead/zinc values.

The Ivan mineral claims are situated in the Greenwood Mining Division of south central British Columbia within two kilometers of Kettle River Resources' significant Sylvester 'K' property, a large potential gold-bearing sulphide prospect.

Reg also has an 80 percent net profits interest in the Silverdale claims, by spending \$31 million before January 1, 1988. The claims total 36 units, (1,860 acres) situated within 500 meters of Regional Resources' main exploration camp.

Finally, Reg holds a 36-unit property known as the Jan and Feb group, which are situated 10 kilometers southeast of the Red Gold discovery in central British Columbia. Reg's property is underlain by the same geological formations as the Red Gold property, which has massive sulphide mineralization with high-grade gold/silver/copper/lead/zinc.

In March 1984, Reg also announced that it had reached agreement to acquire a 30 percent interest in W.E. England Drilling Co. Ltd. This company holds interest in several mineral claims in British Columbia and the Yukon, along with substantial share positions in several junior resource companies.

Reg Resources just recently received approval from Standard & Poor's of New York for listing in their manual commencing September 1984.

## NEWS RELEASE

Reg Resources Corp. is pleased to announce the appointment of Jack Abrams of Calgary, Alberta as Vice-President of oil and gas.

Mr Abrams is a U.S.C. graduate in geological engineering with a Bachelor of Applied Science degree. Mr Abrams has worked with Chevron in Alberta for four years, and with the California Co. in western U.S. for four years. He was with Standard Oil in California for eight years as a petroleum consulting geologist and was the co-founder and former Vice-President of Amalgamated Bonanza Ltd. (presently known as Canadian Bonanza Petroleum Ltd.).

The management of Reg Resources Corp. also announces that the Temple-Eastex Well No 41, located in Sabine County, Texas, has been completed as a successful oil well. This well flowed 180 bbls of oil a day and 106,000 cu.ft of gas per day on a 12/64" choke tested for two hours, and later flowed 112 bbls a day and 56,000 cu.ft of gas per day based on a 24 hour test on a 10/64" choke.

The well was drilled to the bottom of the Saratoga at 6190'; 223' of potential pay was encountered in the Saratoga zone and the bottom 50' was perforated for oil production. Forty acre spacing is to be allotted for this well.

The Sabine County prospect consists of 10,741 acres in which Reg Resources has an option to participate in a 5% working interest (3/65% net revenue before payback).

Further drilling is planned shortly.

## NEWS RELEASE

Reg Resources Corp. is pleased to announce an agreement in principal has been reached to acquire a 30% interest in W.E. England Drilling Company Ltd. from Jake Melnychuk of Watson Lake.

W.E. England Drilling Company Ltd. is also owned by Flame Petro-Minerals Corp. as to 30%; SMR Investments Ltd. as to 30% and Barry Price, Consulting Geologist as to 10%.

The company has an interest in several mineral claims located in the Liard Mining Division in British Columbia and the Yukon - Watson Lake Mining Division - and also owns a substantial share position in several junior resource companies. The mineral claims are located near the Regional Resources lead, zinc, silver property and Butler Mountain Minerals Corp's YP claims.

Regional Resources' reserves on their property, delineated by diamond drilling in the lower zones are now 4.3 million tons - averaging 10.5 oz/ton silver and 17% combined lead/zinc with excellent potential for augmenting reserves (GCNL #236 - December 6th, 1983).

Butler Mountain Minerals Corp. completed a successful exploration program on the YP claims in 1983 which are located in the Watson Lake Mining Division, Yukon. Butler Mountain consultants are recommending a \$2,000,000 continuing exploration on the YP claims.

W.E. England Drilling Company last year optioned and/or sold several of its mineral properties which resulted in a positive cash flow, and a large equity position in several junior resource companies.

Canarim Investment Corporation has exercised its option on the 'B' Warrants and has purchased 200,000 shares @ .55¢ to net the company \$110,000 as of the 5th day of March, 1984.

## NEWS RELEASE

### Re: Liard Mining Division Claims, British Columbia

Reg Resources Corp. owns a 100% interest in 52 units, called the Fly claims and the AG claims, in the Liard Mining Division, 10 km's east of Regional Resources' lead, zinc and silver discovery.

Regional Resources' reserves on their property, delineated by diamond drilling in the lower zones are now 4.3 million tons - averaging 10.5 oz/ton silver and 17% combined lead-zinc with excellent potential for augmenting reserves (GCNL #236 - December 6th, 1983).

Reg Resources' AG claims were explored by Dupont Explorations in 1979, on these claims Dupont revealed a lead-zinc silver anomaly which was trenched, and this work revealed a high grade vein in limestone, mineralized with galena, sphalerite and ruby silver. Selected assays from the trench were:

<u>No.</u>	<u>Pb%</u>	<u>Zn%</u>	<u>AG(oz/ton)</u>
2080	.53	27.50	3.80
2081	56.00	3.18	28.00
2082	19.95	7.15	11.30

Other geochemical anomalies cover areas on either side of the stream draining the Fly 1 and Fly 2 claims. Values up to several hundred parts per million lead and zinc are present.

In 1983 a brief exploration program was conducted by Peter Christopher, P.Eng. for Reg Resources Corp. on the Fly 2 claims; forty eight soil samples were taken and these were analyzed by Chemex Labs Ltd. (sample data below).

<u>Sample</u>	<u>Lead</u>	<u>Zinc</u>	<u>Silver</u>
8381 - B1	52 ppm	140 ppm	1.2 ppm
8381 - B4	260 ppm	840 ppm	3.6 ppm

Two lines of samples spaced at 50 metre intervals outline an area roughly 200 metres by 300 metres in which one or more elements are anomalous. This is a significant anomaly according to our geologist, Barry Price. Further geochemical and geophysical work may extend the zone or discover new zones on strike from the known mineralization according to Barry Price, Consulting Geologist. Further work is to proceed as soon as the weather permits.
