**GEDDES RESOURCES LIMITED**

**WINDY CRAGGY DEVELOPMENT PROGRAM REVIEWED** - Gerald Harper, president,

Geddes Resources has reported exploration drilling of the Windy Craggy deposit, NW B.C., resumed in mid March. The Stage I Environmental and Socioeconomic Impact Assessment report was delivered to the B.C. Government Mine Development Steering Committee at Jan. 30, 1990.

Keith Somerville has been appointed vice president, Mine Development, with responsibility for directing the feasibility study, environmental permitting and engineering programs. Consultants Derry, Michener, Booth & Wahl completed a reserves estimate showing 210,026,100 tonnes grading of 1.59% copper, 0.089% cobalt, 0.18% gold and 3.62% silver. A revised open pit mine plan is being prepared. Preliminary indications are that during the early years of mining the average grade of mill feed can be 2% copper at a waste to ore stripping ratio of less than one to one. A feasibility study of the Windy Craggy project will be started in May and be completed in the fall.

The 1990 program has been budgeted at \$12,000,000 and includes completion of the feasibility study, undertaking Stage II environmental studies and reporting, confirmatory exploration and metallurgical testwork and geotechnical and other surveys of the site area and access route. A supplementary work program costing another \$4,000,000 will be carried out provided the environmental review process is proceeding steadily through the year such that there is a high probability of permits issuance in the Spring of 1991.

At March 31, 1990 working capital was \$5,764,000. Activities in 1990 will make it necessary to raise an additional \$5,000,000 to \$9,000,000 during the year. On April 20, 1990, the Geddes Resources made a private placement of 1,500,000 shares at a price of \$2.05 per share to Northgate Exploration Limited.

**SZL SPORTSIGHT INC. (SZL-V, Pink Sheet)**

**MARKETING PROGRAM PLANNED** - SZL Sportsight has developed "supervision" a unique, patented technology for application in sports broadcasting and training as well as for industrial and military uses. The company has completed development and is set to launch a marketing program. The System is used by three national TV networks: ABC, NBC and ESPN. Its next major exposure will be when ABC Sports will use Supervision to cover the US Open Golf Tournament, scheduled for June 16 and 17.

The System pinpoints fast-moving objects in three dimensional space and, with high resolution graphics, instantaneously display them to the viewer. In baseball, the system creates the pitcher's trajectory, measures the ball's speed and permits the viewers to follow the ball through a three-dimensional strike zone. This information is available instantly and can be viewed from any position on the field. Supervision also revolutionizes the way golf is viewed on TV. The system creates a three-dimensional model of the golf green, enabling the viewer to see how far the ball is from the tee, whether it's above or below the cup and the estimated breaks that can alter the ball's path to the cup. In both baseball and golf, supervision enhances the ball's broadcasts. The technology can be adapted to other sports, such as tennis and bowling.

Management is confident that a market exists in offering supervision to team franchises and stadium owners.

The company estimates that a system installed in the Skydome stadium, Toronto could generate annual revenue of \$804,000 revenue against costs of \$489,000. The company has 5,607,975 shares issued including 525,000 in escrow and 3,000,000 earn-out shares. A contact is Bruce Stratton, Pacific International Securities, Telephone: (604) 681-5217 or 1-800-876-7915 (U.S.).

**AVONDALE RESOURCES INC. (AVD-V)**

**JOINT VENTURE UNDER NEGOTIATION** - Murray Pezim, director, reports

Avondale Resources Inc. has entered negotiations to acquire an option to earn an interest from GULF INTERNATIONAL MINERALS LTD. (GIM-V) in the Inel property in the Iskut River/Eskey Creek area about 50 km NW of Stewart, B.C.

Avondale is currently earning a 100% interest in the Forrest Kerr project, also located in the Iskut River/Eskey Creek area. In 1989, Avondale's work concentrated on the South, Central and Forrest grids where soil sampling, geological mapping and geophysical surveys were completed. Portions of the property were also evaluated by prospecting and rock chip sampling. Several co-incident multi-element geochemical, geophysical and structural anomalies and numerous vein and shear-hosted showings were identified. As a result, the Forrest Kerr property is known to host at least 19 showings or zones of native gold, copper, copper/gold, or gold/arsenic/copper/silver mineralization.

Avondale will spend at least \$1,000,000 exploring the Forrest Kerr project this year. Initially, drilling of the Creek, Triple Creek and Canyon showings is anticipated to be underway the second week of June. The drill will then be moved to test the Forrest zone, an area of quartz vein stockwork topographically above the Creek showing area. Trenching, geochemical and geophysical surveying and drilling will be carried out on a number of other mineralized targets as snow levels recede at the higher elevations. (SEE GCNL No.97, 18May90, P.2 FOR OTHER PROJECT INFORMATION)

**KETTLE RIVER RESOURCES LTD. (KRR-V)**

**GREENWOOD CLAIMS ACQUIRED** - George Stewart, president, reports Kettle River

Resources Ltd. has granted Battle Mountain Gold Company an option to earn a 70% interest in Kettle River's 100% owned Phoenix group of claims located near Greenwood in south-central B.C. Battle Mountain can earn its interest by bringing the property to a production decision, which time Kettle River can either participate or maintain a 4% net smelter return royalty interest. Battle Mountain must conduct a significant work program each year until a production notice is reached with a minimum 3,000 feet of diamond drilling to be completed the first year.

The large block of 164 claims includes the old Phoenix mine operated by Granby Co. from 1899 to 1919 and from 1955 to 1975 as well as the Brooklyn, Stemwinder and Snowshoe mine sites. A group of claims formerly owned by Canbec Resources on Marshall Lake are also included in the Phoenix land package. Dr. Gerald Ray, B.C. Geological Branch reports in paper 1989-3 the Phoenix deposit produced about 30 tonnes of gold, 192 tonnes of silver and 230,050 tonnes of copper from nearly 27,000,000 tons of ore.

Kettle River and Battle Mountain staff are currently studying a century of data in preparation for the field program expected to begin in early June. (SEE GCNL No.49, 9Mar90, P.3 FOR OTHER PROJECT INFORMATION)

**RANDSTROM MANUFACTURING CORP. (ROW-V)**

**WINDOW MANUFACTURING** - Randy Reifel, president, reports ASSETS TO BE SOLD Randstrom Manufacturing Corp. plans to sell its wood window

operation in Surrey, B.C. to Flaming Brothers Construction Ltd. for \$150,000. The sale would include Swedish window assembly equipment and an inventory of wood window components. Proceeds will be used to repay outstanding loans and management fees totalling \$75,000. The balance will be used for working capital. Subject to shareholder and regulatory approval, closing date for the sale is 28Jun90.
