

# Windy Craggy awaits prefeasibility

With a \$13-million exploration program at its Windy Craggy polymetallic project in northwestern British Columbia under way, Toronto-based **Geddes Resources** (TSE) is moving at full speed to have a pre-feasibility study on the table by late fall.

Having outlined 118.8 million tons of grade 1.89% copper over a 1,900-m strike length and to a vertical extent of about 800 m, the company is looking at the various options available to it.

"We are trying to identify the preferred options so that we don't go into the feasibility stage looking at all the available options," said President Gerald Harper, who is already planning for a 20,000-ton-per-day open pit operation.

Regarded as one of the biggest undeveloped copper deposits in North America (reserves include 93.5 million tons of grade 1.93% copper, 0.08% cobalt, 0.19 g gold and 3.26 g silver), the deposit is near the top of a mountain near the Alaska border.

The 31%-owned **Northgate Exploration** (TSE) affiliate is currently driving a cross cut into the North zone at an elevation of about 1,400 m. The North zone is one of two zones, about 300 m apart,

*A drill rig on the Windy Craggy property gives an indication of the topography of the area.*

which contain all of the Windy Craggy reserves. Future plans include drilling between the zones to see if they are joined together in a giant U-shaped fold. According to Harper, a 200-ton underground bulk sample and a second surface sample are being extracted to test the deposit's metallurgical characteristics.

Extra drilling, completed since the previous reserve calculation was announced in June 1989, has provided a lot more confidence in the grade and distribution of the reserves, he said.

As part of an attempt to table a pre-feasibility study by freezeup, Geddes recently drilled nine holes, for which results have been made available.

According to Harper, two holes drilled downwards at the northern limit of the North zone confirm the downward continuity of the deposit. Hole 107 intersected 48 m of grade 1.49% copper, 0.07% cobalt,

0.08 g gold and 0.4 g silver while hole 108 cut 14 m of grade 1.38% copper, 0.10% cobalt, 0.05 g gold and 0.6 g gold.

The first surface hole drilled this year intersected 3.2% copper over a core length of 114 m (including 6.5 m of high gold and zinc values).

"Bench scale metallurgical test-work of the sample material mined from the crosscut tunnel through the South zone recently confirmed that a good quality copper concentrate can be produced," Harper said.

Diamond drilling has also shown the near-surface mineralization includes the secondary copper minerals chalcocite and chalcantite as well as the primary chalcopyrite. "If recoverable, they could enhance the grade of copper concentrate produced in an open pit mining operation," said Harper.

**Mt. Calvary Resources** has changed its name to **Triumph Resources Ltd.** (TUM:VSE) on a 1-new-for-4-old share basis.

## CONWEST EXPLORATION COMPANY LIMITED

### DIVIDEND NOTICE

Notice is hereby given that a quarterly dividend of eleven cents (\$0.11) per share has been declared on each of the Class A shares and Class B subordinate voting shares of the Corporation, payable on October 1, 1989 to shareholders of record at the close of business on September 22, 1989.

By Order of the Board  
J. A. Patterson  
Vice-President and Secretary  
September 12, 1989  
Toronto, Ontario

## FARADAY RESOURCES

### DIVIDEND NOTICE

Notice is hereby given that a semi-annual dividend of eleven cents (\$0.11) per share has been declared on the common shares of the Corporation, payable on October 1, 1989 to shareholders of record at the close of business on September 22, 1989.

By order of the Board  
J. A. Patterson  
Vice-President and Secretary  
September 12, 1989  
Toronto, Ontario

## Gibraltar Mines Limited

The Directors of Gibraltar Mines Limited have today declared a Dividend No. 30 of Twenty Cents per share, payable on September 29, 1989 to shareholders of record at the close of business on September 15, 1989. This represents an increase of Ten Cents per share over the previous regular dividend of Nineteen Cents per share.

BY ORDER OF THE BOARD

John A. E. ...

September 5, 1989  
Vancouver, B.C.

## Fatal accident at Windy Craggy

VANCOUVER — An underground accident at the Windy Craggy exploration site in northwestern British Columbia has killed an employee of Main Street Mining, the Whitehorse-based mining contractor for Geddes Resources. Investigations into the cause of the accident are continuing.

According to Geddes Resources, the Royal Canadian Mounted Police and the coroner from Atlin, B.C., have visited the site as have mining inspectors from the Smithers office of the British Columbia Ministry of Energy, Mines and Petroleum Resources.
