Kennco did six weeks of diamond drilling last year but had much trouble with core recovery. Blank holes may well have resulted in consequence. For example, on the American Metals ground to the northeast, some holes had an overall recovery of 20%, with long sections of no recovery. I will advise if I learn anything more.

Kennco, I believe, ultimately started using the wire-line type of equipment wherein the drill rods are left in the hole after each run and only the core barrel is removed.

To..... W. M. Sirola..... From..... P. M. Kavanagh.....  
Subject..... Kennecott Scud River Property, Stikine River..... Date..... April 2, 1962.....  
Area, B. C.

Dr. Peter Price has heard that Kennco had two drill holes in this property that were both blank. Is there any way you could check this information?

Paul M. Kavanagh  
Chief Geologist - Exploration
