Because of washouts and very high water in the Quesnel River, the Nels Group was not accessible.

The Nels Group was staked on the same type of geochemical evidence as the Sue Group, and no mineralization was found by Bird during the 1963 season. Since our evaluation of the Sue Group was unfavourable, we felt no qualms about not repeating the work on the Nels Group. The group lapsed on June 18th, 1964.
