Dear John:

In August Joan Carne of Archer Cathro reviewed with myself and a colleague your extensive holdings in the Horsefly area. We also had the opportunity to examine the core from the Magabuck property.

Although I think that the Megabuck property has good exploration potential as a QR - Cariboo Bell type of deposit, I am not convinced that it has any epithermal characteristics. In either case the property definitely deserves further work.

Unfortunately due to our heavy commitments in other areas of B. C. we would not be able to do the property justice if we were to acquire it and thus we must decline any participation at this time.

I wish to thank you and Archer Cathro again for inviting us to examine the property and I hope you will consider us with other properties.

Yours truly,

A. J. Davidson
Senior Exploration Geologist
