

PROPERTY NAME BELL CLAIMS (formerly Grandview Property)
 UPDATES Oct. 28/87
 ACTIVE FILE Y/N/M
 CLAIM NAMES Bell 1-A

FINAL RECOMM. Y/N/M
 REPLIED OWNER Y/N
 WHEN/HOW Oct. 28/87
 DATA RETURNABLE Y/N No new data
 RETURNED WHEN
 FILE LOC. Cab/Dr/Or? CAB-5 DR D
 NAME FILE BELL CLAIMS
 MONTHLY REPORTS

LOCATION Ridge area N of Telkwa Pass
 NEAREST TOWN Smithers, B.C.
 ACCESS by helicopter from Smithers
 PROVINCE/COUNTY B.C.
 STATE
 N.T.S. 93L-12E
 TOWNSHIP
 RANGE
 LATITUDE N 54° 36'
 LONGITUDE W 127° 43'
 COMMODITY Au + Ag
 OWNERSHIP Mel Chapman estate.

OTHER REFS.
Min. Inventory "Grandview"

CONTACT PERSON Tony Kazub of Pinegrove Resources Ltd. ^{President}
 TELEPHONE 403-475-1311
 ADDRESS Pinegrove Resources Ltd. P.O. Box 7280,
Station M, Edmonton, Alta. T5E 6C8
 INITIATOR F. Chow
 DATE INIT. OCT. 28/87
 SUBMITTAL Y/N
 SOLICITATION Y/N/M
 DATA STUDIED Y/N
 EXAM PLANNED Y/N/M
 FIELD EXAM DATE Examined in Aug. 6/85
 BY
 DRILLED Y/N/M

KEY QUESTIONS
Will width and Au/Ag values improve with depth?
Not likely.

GEOLOGY Tight Qtz veins in Hazletta volcanics which are intruded by granitic rocks, mainly monzonite stocks, dikes & probably sills. Numerous Qtz veins ranging from 0.5" to 2.5" thick are found widely separated. Qtz veins are traceable over tens of feet to just over 100 feet, all appear to hinge out on strike. The veins strike in all directions within the green andesites, are probably fractures caused by stress during the granitic intrusions. Minor limestone (pendants?) noted.

REMARKS
Tension veins are usually short and narrow - no/kw tonnage. Au + Ag values too low.
Poor target to explore, especially on ridge top 5600'-6000' elevation.

MINERALOGY one contain a Qtz vein
Gold and Silver mineralization is associated with minor amounts of galena, Chalcocite and ^{minor} sphalerite, plus free, dark, disseminated spots of tetrahedrite & probably chalcocite, within the Qtz veins. Gold values range from 45ppm to 1600ppm over 1-2.5" and Silver values from about 16ppm to 58ppm over 1.3" to 8" thick. One exceptionally high value of 6929ppm Ag + 2.17% Au found at a fault/vein intersection.

MODEL Hydrothermal quartz veins

OTHER DATA Geology plan & sample location & assays by R. Potter of Silver Standard, 1965.
F. Chow Aug 6/85 field examination & sampling.

LEGAL Pinegrove Resources holds option from M. Chapman estate.
