*In 1956, Cu was 40¢ per lb and
the option was dropped after considerable
drilling but it would be best to
get the drilling results if they are
available.*

The property is owned by Clarence Fuller and Sture Pearson of Quesnel, B. C. It is situated 13 miles northeast of Quesnel.

In 1956, 20 tons of cobbled ore was shipped to Tacoma. The metal content was approximately 6.0% Cu, 0.05 ozs. Au/ton, 0.5 ozs. Ag/ton.

During the winter of 1955 - 1956, about 8,000' of diamond drilling was done by McFee Exploration and Harrison Minerals under the direction of George Holbrook and Grant Harper, both of Toronto.

The chalcopyrite occurs in an andesite breccia. Limited exposure makes a surface examination of little value.

As far as can be learned, no geochemical or geophysical surveys were done on the property.

RECOMMENDATIONS:

- (1) Mr. Holbrook should be contacted in an attempt to obtain the diamond drilling results.
- (2) If there were any ore intersections, the property should be optioned.
- (3) Light overburden makes this an attractive location for detailed geochemical work around the main showing.

It seems likely that in this copper belt, which is several miles long, an ore deposit exists.

I believe this is a good place to start looking.

No action warranted or taken
