

Whitesail Lake Project

South of Snake Mountain & in area of "proposed staking".

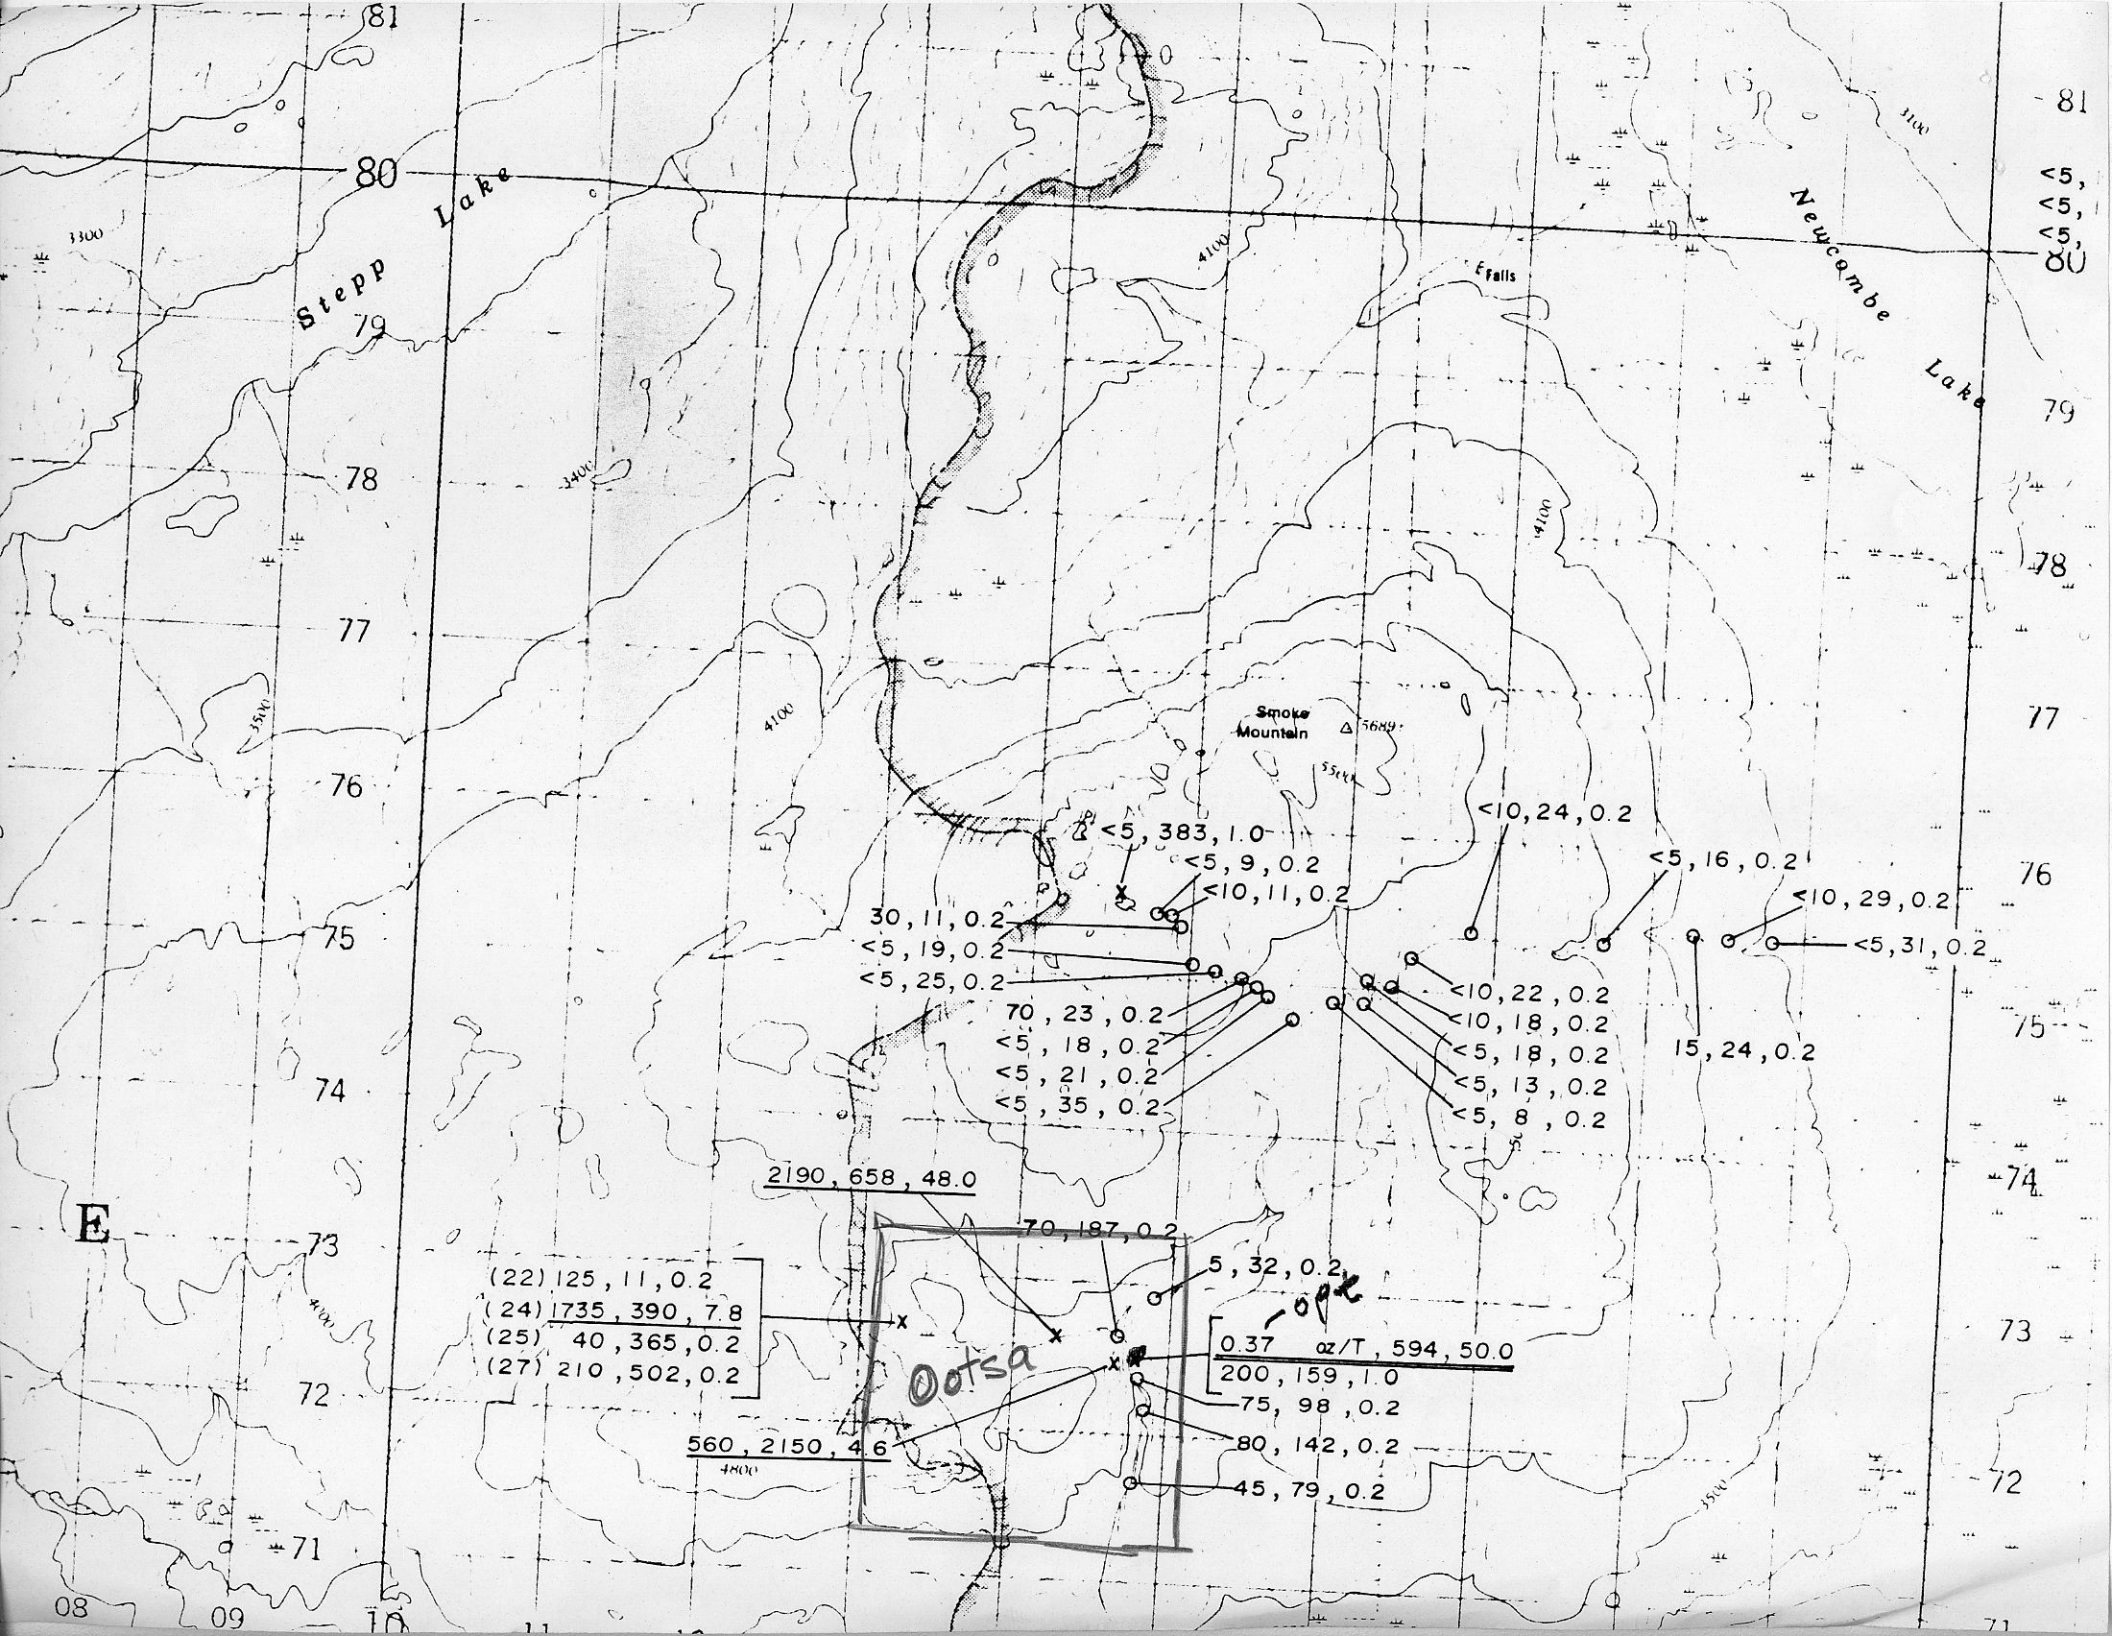

Getting fairly good numbers in a small area. Intensely altered, fractured, pyritic Karsolka Group volcanics.

I would recommend a small claim and/or more detailed sampling and mapping.

The rest of the Sibola range has several clusters of high Cu, but low precious metals. (Porphyry environment).

The Snake 100, Spuds & Snake claims have no numbers and it is a mystery to me why they were staked.

I can't find out where the DSN Govt claims are, unless they cover the "proposed staking" area.
