

## CORPORATION FALCONBRIDGE COPPER

MEMORANDUM

DATE: November 16, 1983  
TO: D. H. Watkins  
COPIES TO: M. J. Knuckey  
FROM: A. J. Davidson  
SUBJECT: REA GOLD PRELIMINARY DRILL PROPOSAL

---

Attached please find a preliminary proposal for initial drilling on our Rea Gold property.

The program is designed in two stages. First priority holes are spaced 25 metres apart along the strike of the horizon at depths of 30, 60 and 90 metres on a close-packed grid. The first priority holes total 1200 metres of drilling. Two Longyear 38's will be used to drill these first holes.

Second priority holes continue the pattern another 50 metres to the north and south. Second priority holes total 900 metres. The total effect of this program would be to define a block 200 metres long X 100 metres deep X 3 metres thick = 180,000 tons.

These second stage holes are necessarily dependant on results of the first 8 holes. If drilling indicates good continuity in these first holes, the spacing of second priority can be increased. Alternatively one drill can be used to continue the 25 metre stepouts and the other can be used for wide spaced holes or deeper drilling.

The drills should be on the property and drilling by November 22.
