NEWS RELEASESEPTEMBER 16, 1985

Mining is underway in the Lower Adit on the Wagner project on Mount Templeman, 60 miles southeast of Revelstoke, B.C. The workings are being advanced at about 20 feet per day extending zone of the high grade silver-lead-zinc. When this phase of drifting started the face of the level assayed 31.33 oz. silver/t, plus 32.2% combined lead zinc across 8.25 feet. The field geologist has reported that on visual inspection the new mining has been in similar or better looking mineralization. Assay results from the current work are expected shortly.

The immediate objective of the current mining program is to advance this level some 400 feet to the other side of the mountain. A surface sample near where the level will break through assayed 22.4 oz. silver/t, 20.5% combined lead-zinc across 7.5 feet. When it has been holed through it is intended to complete a raise through to the Upper Adit level in preparation for expanding the direct ore shipping operation.

A recent progress report from the consulting geologist P.J. Santos, P. Eng. notes that four new mineral showings have recently been opened up and sampled with the following results:

1. Located 600 feet north of the Sheep Creek Adit the showing appears to be an extension of the gold vein which earlier was reported to assay 0.42 oz. gold/t, 3.79 oz. silver/t across one foot. Five new channel samples across three to 8 feet carried about 0.01 oz. gold/t and 3 to 7.6 oz. silver/t, and 3% to 10% combined lead-zinc.
2. Located southwest of the Sheep Creek adit a galena vein one to 2 feet wide assayed between 11 and 51.3 oz. silver/t, plus 12.7% to 64.7% combined lead-zinc.
3. Located 600 feet directly east of the Sheep Creek adit a new set of galena veins a minimum of 5 feet wide showed between 1.6 and 27 oz. silver/t, 2.5% to 47% combined lead-zinc.
4. Located below the snow field and in line with the Wagner vein and the Sheep Creek a galena vein has been exposed by trenching. One sample from this partially exposed mineralization assayed 26 oz. silver/t, 31.4% combined lead-zinc.

The consultant concludes it appears the three principal mineralized zones that occur on the Duncan Knob-Wagner continue to the southeast to the Sheep Creek adit, a minimum of 3,000 feet through a vertical range of 1,000 feet. The recommendation to rehabilitate the Sheep Creek adit has started. At the same time the company will be opening by trenching the Jewel to the southeast of the Sheep Creek adit where the old records show a 700 foot length of vein to vary from 12 to 15 feet wide and grade 34.8 oz. silver/t, 48% combined lead-zinc.

NEWS RELEASE

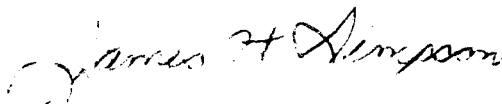

SEPTEMBER 16, 1985

The Bannockburn claims which are located about 2 miles to the south east of the Sheep Creek adit have been acquired. The old records show the replacement veins on these claims to be about 5 feet wide and carry between 22 and 35 oz. silver/t, and 36 to 78 % combined lead-zinc. It is intended to continue the road which is currently being built to the Jewel and start trenching as soon as possible.

Mikado Resources Ltd. recently completed a successful financing through Yorkton Securities Ltd. which provided \$690,000 with which to advance the property development.

Exploration in the form of bulldozer trenching, sampling, geological mapping is now underway on the Sue 1 and Sue 2 claim groups in the Midway-Rancheria River area 60 miles west of Watson Lake, Yukon. Mikado Resources Ltd. holds an option to earn a 60% working interest in these claims by spending \$1,050,000 on exploration by December 31, 1987. Diamond drill testing of these targets will start as soon as the best of the many possible locations can be determined. Previous surface sampling in one of the showings assayed 18 oz. silver/t. Soil sampling and VLF-EM surveys located strong anomalous targets in the area of this showing. Regional Resources holds ground to the south of the Sue 1 and 2 and has reported that testing of a strong anomalous target located between the existing ore body and the Turner property is yet to be drill tested. Your management hopes that the Regional Resources program continues to be successful and that the mineralization there trends toward and continues onto the Sue group.

On behalf of the board of directors.

James Simpson, Managing Director.
