NEWS RELEASE

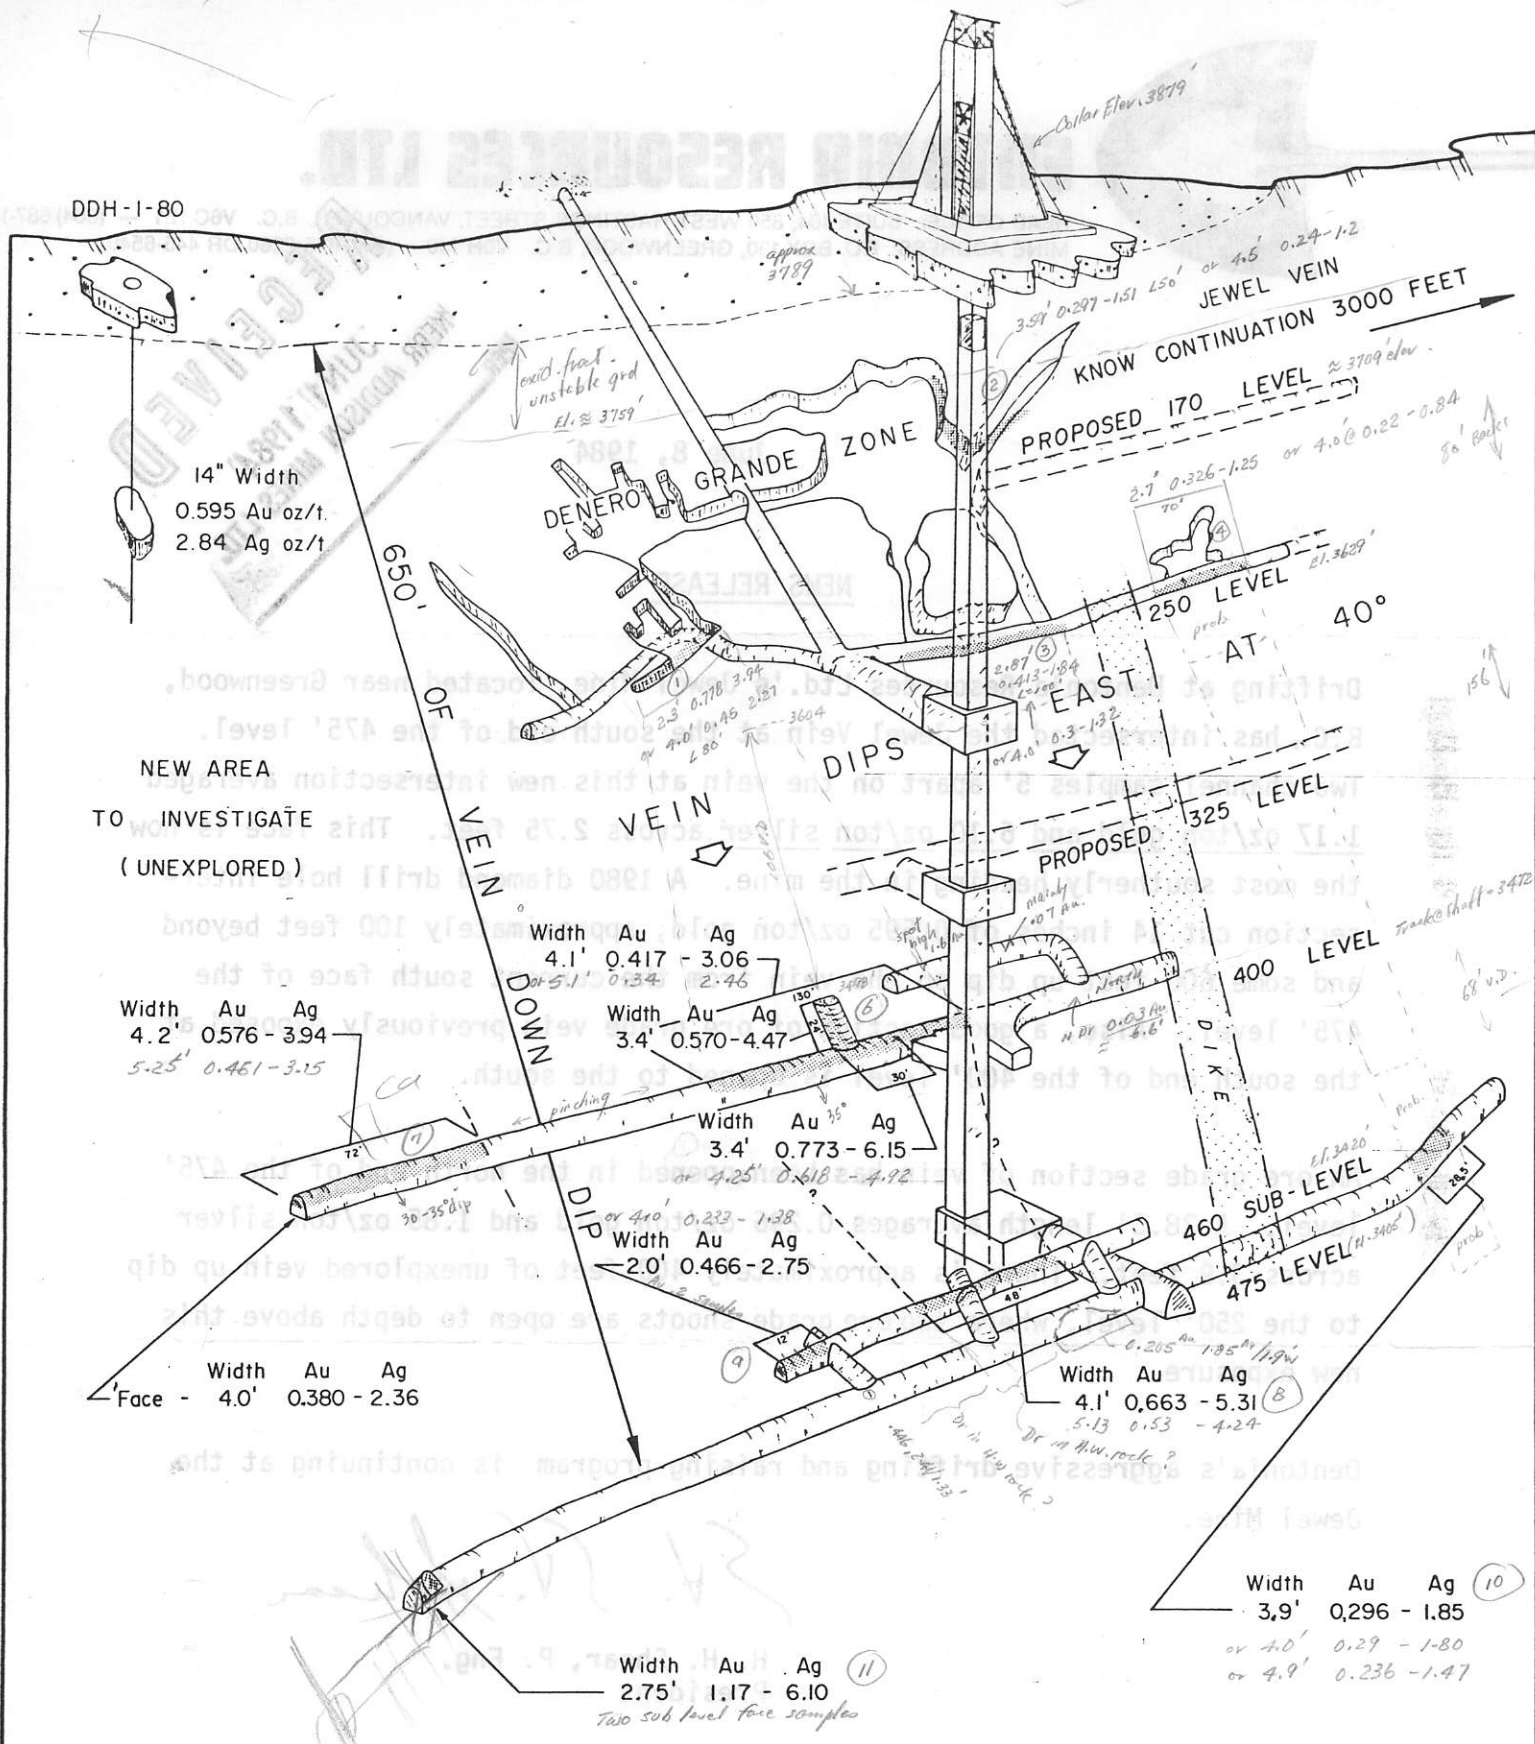

Drifting at Dentonia Resources Ltd.'s Jewel Mine, located near Greenwood, B.C., has intersected the Jewel Vein at the south end of the 475' level. Two channel samples 5' apart on the vein at this new intersection averaged 1.17 oz/ton gold and 6.10 oz/ton silver across 2.75 feet. This face is now the most southerly heading in the mine. A 1980 diamond drill hole intersection cut 14 inches of 0.595 oz/ton gold, approximately 100 feet beyond and some 600 feet up dip on the vein from the current south face of the 475' level. Also, a good section of ore grade vein previously exposed at the south end of the 400' level is opened to the south.

An ore grade section of vein has been opened in the north end of the 475' level. A 28.5' length averages 0.296 oz/ton gold and 1.85 oz/ton silver across 3.9 feet. There is approximately 400 feet of unexplored vein up dip to the 250' level, where two ore grade shoots are open to depth above this new exposure.

Dentonia's aggressive drifting and raising program is continuing at the Jewel Mine.
