SUJET  
SUBJECT: Third Quarter Progress Report - Athelstan Jackpot Property

---

Attached are copies of the month end reports for August and September, outlining work completed to date on the Athelstan - Jackpot property. Work to date has consisted of re-establishing the existing grid and preliminary geological mapping. If you have any questions regarding this work please feel free to give me a call in Greenwood at 445-2244 or 445-6498.

## August Month End

The initial work program on the Athelstan-Jackpot property was started in August. Twenty-nine kilometres of existing cut line is being re-chained and flagged; this work will be complete in early September. Geological mapping of the grid has been started.

## September Month End

Twenty-nine kilometres of line has been rechained and marked on the original Athelstan Jackpot grid. There appears to be quite a discrepancy between where we believe the northern boundary to be and where Attwood Gold believes it to be (the grids overlap by up to 500 metres at the north end, and Attwood Gold's tunnel appears to collar on our ground). I will be meeting with their geologist this week to try and clarify the boundaries.

Geological mapping and rock sampling has begun on the grid and will be completed during October. We will try to obtain the raw data from previous soil sampling and geophysics done on the grid so maps can be prepared at the same scale as our geology maps.
