I am enclosing a copy of a letter received from Mr. Kavanagh dated March 26th. It would appear that we have drawn a blank, and no doubt he knows a great deal more about mining in that area than my people do. While it is quite obvious he has not had a chance to make a survey of the property, no doubt any geological reports which are available are sufficient evidence to him of its worth.

I thought the phrasing "decided not to seek any involvement with me" rather unusual. However, that is probably a matter of expression.

I trust that your return journey was a pleasant one, and in the meantime my very best personal regards.

Before I close, I just noted that Western Mines are trading at \$4.20 a share, and are apparently as hot as a firecracker.

Yours truly,

C. Whitworth Stanbury

Mr. C. Whitworth Stanbury, Stanmack Mining Co. Ltd., 1220 Broad Street, VICTORIA, B. C.

Dear Mr. Stanbury:

With reference to your letter of February 12th to our president, Mr. Row, in which you brought to our attention your property near Revelstoke, B. C., I wish to advise you that after considerable thought we have decided not to seek any involvement with you in a further development of the property. We do, however, appreciate very much your introducing the property to us and we thank you for doing so.

Yours sincerely,

KERR-ADDISON GOLD MINES LIMITED,

STANMACK MINES LTD., consists of a group of claims in the ground Hog Basin area, approximately sixty-five miles north west of Revelstoke, B.C. Great interest was evidenced in the area when a nugget from the Orphan Bay claim owned by this company, was discovered some years ago and forwarded to the Paris Exhibition where it won first prize. Much work was done on the properties at that time; on the Orphan Bay alone 150' shaft was sunk and 1,200 tons of high grade ore (note assays below) were dumped near by. This dump is still on the property. The indicated value of the ore is approximately 40,000,00 Dollars at to-day's price.

It is also interesting to note that 3,000,000.00 dollars in gold was taken from McCulloch Creek which (note map) runs at the base of the claims.

The lack of road facilities largely prevented development, plus the fact that until only a few months ago the claims had been held by one family for many years.

The road into the area was completed by the province of British Columbia in 1957.

The necessary equipment for the purpose of carrying out a diamond drilling program plus a small ball Mill to work the ore on the present dumps have been acquired.

It is the Intention of the Company to send in a small crew in the Spring to set up camp and to take assays, etc.

The following Assays are registered with the Department of Mines, and may be seen in the Ministers Office. Mines report page 535 a copy of which is retained in the office of the Company.

	No. l.	Assay Sulphurets of Iron	7 oz. gold	\$ 140.00@ 20 0

#### KERR-ADDISON GOLD MINES LIMITED

(FOR INTER-OFFICE USE ONLY)

To	P M	.Kayanagh			From	C. K.	Wilton				
Subject	Stanbur	y Claims.	Revelstoke	Area, B.	C, (82	M)	Date	February	19,	1963.	

Ashan Bot

The following is summarized from G.S.C. Summary Report, 1928, Part A. The history of mining in the area began in 1865 when placer gold was found in several streams draining the Columbia river particularly in the vicinity of Goldstream river. In 1885 gold quartz veins were discovered around the headwaters of McCulloch creek. In 1896 the Ole Bull and Orphan Bay groups on McCulloch creek received extensive development on gold quartz veins, mineralized with pyrite, free gold, and occasionally with pyrrhotite, which occupy fissures which generally cut the bedded sediments at sharp angles. Gold values are erratic and occur in the pyrite, or as free gold in the quartz, or in crushed zones along the sides of the veins. The veins vary from a few inches to 6 feet in width, averaging between 2 and 3 feet. None of the veins have proved commercially important.

The Ole Bull and Orphan Bay groups were developed mainly between 1896 and 1900 and were idle from then, at least until 1929. Some exceptionally rich pockets were reported to have been encountered on the Orphan Bay.

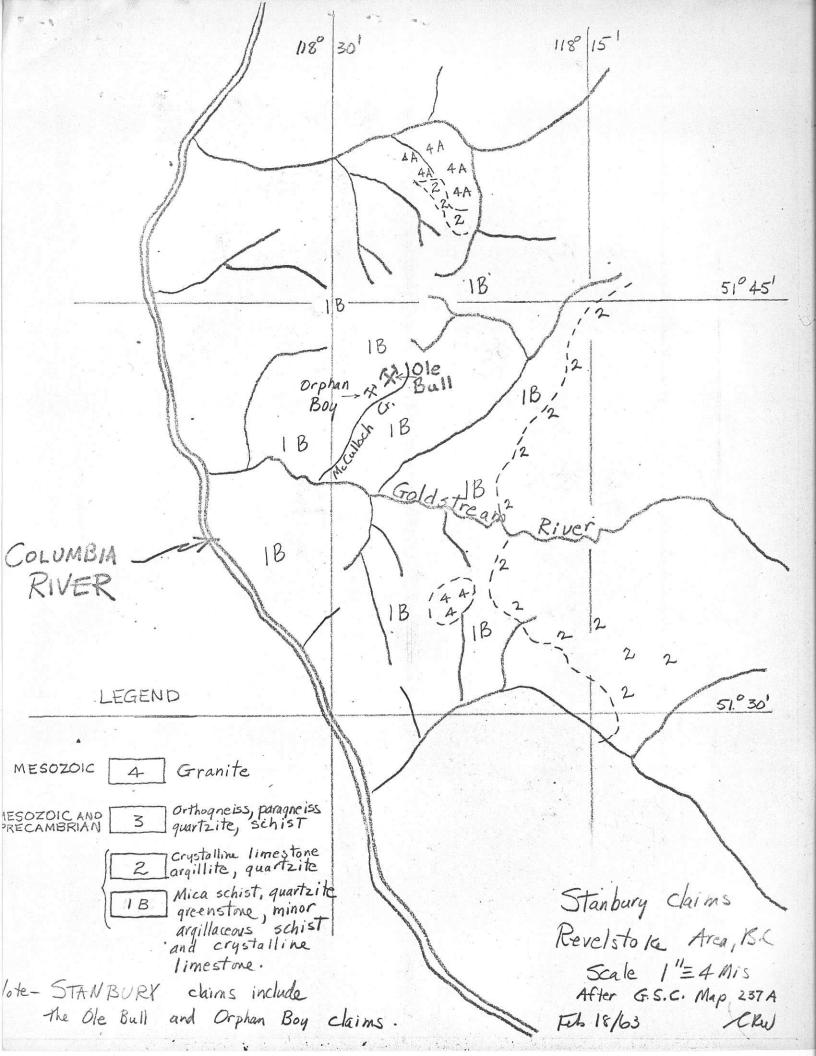

On the Ole Bull group there are several parallel, well-defined quartz veins which vary in width from 6 inches to 3 feet.

A sketch showing the location of the claims is attached.

Mr. Fraser's letter mentions that the property is well known to the B.C. Department of Mines. Therefore they could probably furnish up to date information on the more recent history of the claims.

DEar William: Sorry to miss the Thield meeting but I do not see how I can make it. I was chatting today to our old friend Whit. (b. Whitworth) Stanbury, and he mentioned a gold property which he owns or controls and which seems to have a long history. It is well known to the Officers of the stept of mines here. I know hothing about the property nor have I any financial interest in it but it sounded like a situation that would at least warrant a lookse a line with whatever he thought would give you the outlines of a protise neutroning my riame. your associate's field men in the frequity to se milstanbury.
