## KERR ADDISON MINES LIMITED

AUG 30 1976

(FOR INTER-OFFICE USE ONLY)

To D.A. Lowrie From W.M. Sirola

Subject BURRELL CREEK CU-MO PROSPECT, FRANKLIN CAMP, B.C. Date 26th August 1976

In reply to your memo of 4th August on this showing, my understanding is that the so-called "Alco" occurrence is a 20' wide shear zone on the contact of Nelson quartz diorites with volcanic rocks. The shear zone probably averages 0.6-0.8% Cu over 20' and is open to the South.

I have no knowledge of radioactivity over this showing at the moment.

Any similarity between the Brenda deposit and the "Alco" showing must be a figment of someone's imagination. Under the circumstances, I cannot get wildly excited by the adjacent Belcarra ground.
