IF THE LIMIT OF TRACHYTE AND QTZ SERICITE SCHIST IS IN FACT THE UPPER CONTACT OF TRACHYTE AND AN OVERLYING SCHIST, AND IF THIS CONTACT DIPS NORTH AT 20° MORE OR LESS, THE AREA TO THE NORTH WOULD BE UNDERLAIN BY TRACHYTE COVERED BY A THIN LAYER OF SCHIST. IN SUCH A CASE, THE HIGH RESISTIVITY RESPONSE NOTED ABOVE COULD BE SIGNIFICANT.

DACITE PORPHYRY  
 QTZ SERICITE SCHIST  
 FAULT CONTACT?
