 SUJET SUBJECT: REA GOLD MINERAL INVENTORY

824595

The following adjustments result from a reinterpretation of the dip of the ore zone after surveying drill collars. The dip appears to be  $52^{\circ}$  rather than the  $45^{\circ}$  previously used.

REVISED MINERAL INVENTORY

	Metric Tonnes	% Cu	% Zn	% Pb	Ag g/t	Au g/t
undiluted	111,598 (121,298)	0.79 (0.78)	4.11 (4.13)	3.52 (3.51)	138.9 (139.1)	17.3 (17.1)
diluted (15%)	128,338 (139,493)	0.69 (0.68)	3.57 (3.59)	3.06 (3.05)	120.8 (121.0)	15.0 (14.9)

Although reducing tonnage by about 8%, the Au grade is improved slightly. The steeper dip should also have the effect of reducing the stripping ratio if pit wall stability allows a steeper slope.
