MEMORANDUM

TORONTO June 17, 1957

TO: DIRECTORS, TRIANA EXPLORATION LIMITED

FROM: MR. G. M. RADISICS

SUBJECT: SHEEPCREEK MINES LIMITED

I understand that a recent diamond drill hole put out from the 5th level of this mine has cut 20 feet running a little better than 9% in lead and 5% in zinc. These values are almost 100% better than the ore now being mined under second and third levels. Management is very pleased with these results, particularly so since the ore has a flat rake and dip and, therefore, this new hole may indicate that substantial good grade tonnages of ore will become available for mining.

MEMORANDUM

TORONTO March 19th, 1957

TO: DIRECTORS, TRIANA EXPLORATION LIMITED
FROM: MR. G. M. RADISICS
SUBJECT: SHEEP CREEK - MINERAL KING PROPERTY, BRITISH COLUMBIA

Lateral work in progress on that property resulted in encountering the downward extension of the main ore body 180 feet vertically below the #3 level, and over widths of 37 feet ore grading 2.4% in lead, 6.6% in zinc and good values in copper has been encountered. Since it is my understanding that this ore is relatively flat dipping, this new ore disclosure may add substantial tonnages to the already fair ore reserves on this property.

I am enclosing herewith schematic sketch showing approximate location of the new ore body located on this property in recent work. While insufficient exploration has been completed to date on this occurrence to allow assessing its importance, primary indications nevertheless are such as to assume that this may turn into another important ore source for this mine. I may say that if this new ore occurrence is found to be extensive, plans are formulated to double the present mill capacity. It is expected to have the raise to the third level completed by about May, after which detailed diamond drilling from this horizon will be undertaken to outline dimensions of the new ore body.
