August 25/72

Inds-

Geology and geochem was done on MC claims on Aug 24 & part of Aug 25/72.

Geochem samples (6-3-593-611⁺) were taken to try and fill gaps left due to snow at the first camp.

Geology was done simultaneously along the lines as far as they were marked. As indicated on the map ~~A~~ only one rock type was observed, ~~although~~ outcrops were not abundant.
