SHARES OUTSTANDING: 2,020,000

VANCOUVER, BC--The Huntington Resources - Lacana Joint venture on the Brett Property west of Vernon wishes to announce a truly exceptional gold intersection. This intersection averaging 2.03 oz/T gold over 235 feet comes from a recent reverse circulation hole RC-88-11 drilled on the Main shear zone.

The hole was targeted to test the continuity of high grade gold mineralisation intersected by three diamond drill holes in 1987 (previously reported) on section B+05M. This was achieved by drilling through and beyond these core intersections. The mineralisation is largely in the footwall to the Main shear zone and includes an upper higher grade section of 145 feet averaging 2.95 oz/T Au with much visible gold and a section beneath with 80 feet averaging .548 oz/T Au. A summary table with details of individual assay sections follows.
