GRAPHIC REPRESENTATION OF RC88-11

This graphic represents the actual exploration carried out on Section 8 + 05N of Huntington-Corona's Brett Claims. Included are the results from RC-88-11 (235 feet averaging 2.03 ounces of gold per ton).

The combination of diamond drilling (DDH) and reverse circulation drilling (RC) has proven to be the optimum strategy for the continued development of the Main Shear Zone.

MAIN SHEAR ZONE

The above map illustrates the development to date on the Main Shear Zone on the Brett Claims, as well as, that portion of the Main Shear Zone to be tested this year.

Three other zones - the New Discovery, East, and Gossan Zones - will undergo further drilling this year.

GRAPHIC REPRESENTATION OF RC88-11

This graphic represents the actual exploration carried out on Section 8 + 05N of Huntington-Corona's Brett Claims. Included are the results from RC-88-11 (235 feet averaging 2.03 ounces of gold per ton).

The combination of diamond drilling (DDH) and reverse circulation drilling (RC) has proven to be the optimum strategy for the continued development of the Main Shear Zone.

HUNTINGTON

RESOURCES INC.

BACKGROUND

Huntington Resources Inc. was incorporated in 1983 and acquired the Brett claims, a classic epithermal gold prospect located near Vernon B.C., later that year. The initial work program carried out in 1984 consisted primarily of preliminary geochemical sampling.

In 1985 the work program included soil sampling, rock sampling and trenching along with the construction of approximately 5 kilometers of road. Early indications of a large controlling structure became evident.

The 1986 work program included 2,600 feet of diamond drilling in 16 holes, trenching and additional road building. The Main Shear Zone (the large structure outlined in 1985) was extended to a length of approximately 1,150 feet.

Following negotiations with several major mining companies in early 1987, Huntington entered into an option agreement with Lacana Mining Corporation which has since been acquired by Corona Corporation. (The recently established Corona Group of companies is now one of Canada's largest and most aggressive mining corporations.)

Under the terms of that agreement Corona was to invest \$500,000 in the Brett claims by December 31st, 1988. That \$500,000 investment, cash payments totaling \$110,000 and the purchase of \$100,000 of Huntington's treasury stock entitled Corona to acquire a 51% interest in the Brett claims. Corona was also granted an option to acquire an additional 100,000 treasury shares per year for a period of five years. The price will be based upon the then current market price of Huntington's stock.

The work program for 1987 included geochemical surveys, trenching, road building and approximately 10,000 ft. of diamond drilling in 32 holes. The Main Shear Zone was extended to 1,870 ft. in length, several yards in width and to a vertical extent of over 820 ft.. The zone remained open along strike and at depth. On the basis of the geological setting, style of mineralization and dimensions, the Main Shear Zone was considered by Huntington to have excellent potential for development.

The 1988 program, highlighted by Reverse Circulation Hole No. 88-11 (235 ft. averaging 2.03 oz. of Gold/per ton) was considered to be outstandingly successful. This hole confirmed the presence of very high grade ore shoots.

The program included 32 diamond drill holes totaling approximately 9,500 ft., 34 reverse circulation holes totaling approximately 9,300. ft., soil sampling and further road construction. Detailed drilling along an approximate 600 ft. portion of this zone revealed mineralization over vertical range of between 300 ft. and 500 ft. It was also determined that gold and silver mineralization often extended into the host rocks over widths several times that of the Main Shear Zone in a HALO like effect.

Recent exploration indicates that the Main Shear Zone has a northerly strike length potential of at least 2,000 ft. beyond the approximate 650 ft. explored to date. This year's program will further test this zone as well as three adjacent zones, bringing the total investment in the Brett claims since 1984 to \$1.7 million.

HUNTINGTON RESOURCES INC.

MANAGEMENT TEAM

Stirling D. McIlveen of Abbotsford, B.C. and **Milton H. Cook** of Okanagan Falls, B.C. have held the office of President and Secretary respectively since the company was established.

Mr. McIlveen had been employed in the finance and marketing areas for the past 20 years.

Mr. Cook is a well-known Penticton businessman having owned and operated several successful companies throughout the Okanagan.

Charles I. Brett of Kelowna, a company director since incorporation, has been active in the exploration and devel-

opment area of the mining industry. Mr. Brett was instrumental in Huntington acquiring the Brett claims.

Werner Gruenwald became a director of Huntington Resources Inc. at the request of the Board of Directors in 1985. Mr. Gruenwald has extensive experience in exploration and development of mineral properties throughout British Columbia and the Western United States. Largely responsible for developing the Brett claims, he has successfully managed Huntington's exploration and development program over the past four years.
