COPIES A

DE FROM:

I. D. Pirie

SUJET SUBJECT:

1986 BAR Exploration Program

Attached is a forecast of expenditures for the Bar Project in 1986 along with a quarterly breakdown. These are, of course, contingent upon joint venture funding being in place. The program planned has the following aims.

- to map and sample existing grids over the SC and Anna felsic centres in order to prioritize drill targets to be tested in September/ October 1986
- to firm up drill targets on the Dixon Lake grid with MaxMin coverage
- to examine in detail the potential felsic centre with coincident highly anomalous Au in sediments occurring immediately north of Little Dixon Lake
- to examine in detail the Wikiup felsic centre
- to examine in detail the SC l area for the source of sediment anomalies in that area.

Work in these areas, which cover almost the entire stratigraphic sequence on the property, will provide us with essential stratigraphic and paleo-environment information and allow us to efficiently explore this large property.

Ian D. Pirie
