## **TWO PROMISING ADVANCED STAGE BRITISH COLUMBIA GOLD PROJECTS**

MBI IS SEEKING EXPRESSIONS OF INTEREST ON THESE TWO B.C. CANADA GOLD PROJECTS. OUR CLIENTS WOULD CONSIDER OPTIONS, JOINT VENTURES, FARM-IN AGREEMENTS OR ACQUISITIONS FROM PROSPECTIVE PARTICIPANTS WITH RECOGNIZED EXPLORATION, DEVELOPMENT OR MINING EXPERIENCE.

### **INEL PROPERTY**

#### **THE PROPERTY:**

- ▶ 15 Contiguous Claims
- ▶ 217 Claim Units
- ▶ 5,424 Hectares

#### **LOCATION:**

- ▶ 5 Km East of Skyline's Johnny Mountain Mine
- ▶ 7 Km Southeast of Cominco's Snip Mine
- ▶ 35 Km West of Eskay Creek Deposit

The Inel property (100% interest held by Gulf International Minerals Ltd.) remains one of the most prospective in the Iskut Gold Camp, British Columbia, Canada. A \$2.5 million exploration program examined the AK gold breccia from underground. With the underground portion of the project now in place, the stage is set for a drilling campaign to fully evaluate the AK's potential. The AK gold breccia represents only part of the Inel property's potential. The property is known to host several other styles of mineralization including gold with copper in veins, gold with zinc and copper in stratabound, massive zones and porphyry copper-gold mineralization.

### **McLYMONT PROPERTY**

#### **THE PROPERTY:**

- ▶ 4 Contiguous Claims
- ▶ 80 Claim Units
- ▶ 2,000 Hectares

#### **LOCATION:**

- ▶ 19 Km Northeast of Cominco's Snip Mine
- ▶ 22 km Northeast of Skyline's Johnny Mountain Mine
- ▶ 32 Km Northwest of the Eskay Creek Deposit

The McLymont property (100% interest held by Gulf International Minerals Ltd.) is unique in the Iskut Gold Camp in that it represents the only known occurrence of a gold-enriched skarn deposit. The Northwest Zone is mineralized over a strike length of 985 ft. and to depths of up to 650 ft. below surface. The zone has not yet been fully delineated. A recent program, which included 13,233 ft. of diamond drilling, resulted in a much improved understanding of the geological controls of the gold mineralization. This program also led to the identification of a number of other prospective gold skarn targets on the property. These require drill testing. In addition, the southeastern half of the property, which is underlain by similar rock types and is known to host a number of mineral showings, has yet to be explored in detail.

CALL ME; GARRY CHAPMAN / EMMANUEL LUTWICK; MBI WILL PROVIDE A NON-CONFIDENTIAL MEMORANDUM REVIEWING THESE PROPERTIES TO QUALIFIED PARTIES WITHOUT OBLIGATION. MBI MAKES NO REPRESENTATION OR WARRANTIES, EXPRESSED OR IMPLIED, ON THESE PROPERTIES. DUE DILIGENCE IS REQUIRED.
