SARABAT GOLD CORPORATION

PROSPECTUS EFFECTIVE DATE: FEBRUARY 20, 1990

THIS PROSPECTUS CONSTITUTES A PUBLIC OFFERING OF THESE SECURITIES ONLY IN THOSE JURISDICTIONS WHERE THEY MAY BE LAWFULLY OFFERED FOR SALE AND THEREIN ONLY BY PERSONS PERMITTED TO SELL SUCH SECURITIES. NO SECURITIES COMMISSION OR SIMILAR AUTHORITY IN CANADA HAS IN ANY WAY PASSED UPON THE MERITS OF THE SECURITIES OFFERED HEREUNDER AND ANY REPRESENTATION TO THE CONTRARY IS AN OFFENCE.

PROSPECTUS DATED FEBRUARY 12, 1990

SARABAT GOLD CORPORATION
(hereinafter called the "Issuer")
Suite 840 - 650 West Georgia Street
Vancouver, B.C.

500,000 Common Shares

Shares	Price to Public	Agents' Commission	Net Proceeds to be received by the Issuer*
Per Share	\$0.50	\$0.045	\$0.455
Total	\$250,000	\$22,500	\$227,500

*Before deduction of the balance of the cost of the issue estimated to be \$15,000.

THERE IS NO MARKET THROUGH WHICH THESE SECURITIES MAY BE SOLD. THE PRICE TO BE PAID TO THE ISSUER FOR THE SECURITIES WAS ESTABLISHED BY NEGOTIATION BETWEEN THE ISSUER AND THE AGENTS.

THE VANCOUVER STOCK EXCHANGE HAS CONDITIONALLY LISTED THE SECURITIES BEING OFFERED PURSUANT TO THIS PROSPECTUS. LISTING IS SUBJECT TO THE ISSUER FULFILLING ALL THE LISTING REQUIREMENTS OF THE VANCOUVER STOCK EXCHANGE ON OR BEFORE AUGUST 20, 1990, INCLUDING PRESCRIBED DISTRIBUTION AND FINANCIAL REQUIREMENTS.

A PURCHASE OF THE SECURITIES OFFERED BY THIS PROSPECTUS MUST BE CONSIDERED A SPECULATION. THE PROPERTIES IN WHICH THE ISSUER HAS AN INTEREST ARE IN THE EXPLORATION AND DEVELOPMENT STAGE ONLY AND ARE WITHOUT A KNOWN BODY OF COMMERCIAL ORE. NO SURVEY OF THE PROPERTIES OF THE ISSUER HAS BEEN MADE AND THEREFORE IN ACCORDANCE WITH THE LAWS OF THE JURISDICTION IN WHICH THE PROPERTIES ARE SITUATE, THEIR EXISTENCE AND AREA COULD BE IN DOUBT. SUBSCRIBERS WILL SUFFER AN IMMEDIATE DILUTION IN THE BOOK VALUE OF SECURITIES PURCHASED PURSUANT TO THIS OFFERING. REFERENCE SHOULD BE MADE TO ITEM 6, "RISK FACTORS", FOR FURTHER INFORMATION REGARDING SUCH DILUTION AND OTHER RISK FACTORS.

UPON COMPLETION OF THIS OFFERING THIS ISSUE WILL REPRESENT 28.9% OF THE SHARES THEN OUTSTANDING. THE SHARES NOW OWNED BY CONTROLLING PERSONS, PROMOTERS, DIRECTORS AND OFFICERS OF THE ISSUER REPRESENT 46.9% OF THE SHARES WHICH WILL BE ISSUED AND OUTSTANDING ON COMPLETION OF THIS OFFERING. REFER TO ITEM NO. 13, "PRINCIPAL HOLDERS OF SECURITIES", FOR DETAILS OF SHARES HELD BY SUCH PERSONS AND BY UNDERWRITERS AND THEIR ASSOCIATES.

ONE OR MORE OF THE DIRECTORS OF THE ISSUER HAS AN INTEREST, DIRECT OR INDIRECT, IN OTHER NATURAL RESOURCE COMPANIES. REFERENCE SHOULD BE MADE TO THE ITEM "DIRECTORS AND OFFICERS" ON PAGE 12 FOR A COMMENT AS TO THE RESOLUTION OF POSSIBLE CONFLICTS OF INTEREST.

NO PERSON IS AUTHORIZED BY THE ISSUER TO PROVIDE ANY INFORMATION OR TO MAKE ANY REPRESENTATION OTHER THAN THOSE CONTAINED IN THIS PROSPECTUS IN CONNECTION WITH THE ISSUE AND SALE OF THE SECURITIES OFFERED BY THE ISSUER.

THIS OFFERING IS SUBJECT TO A MINIMUM SUBSCRIPTION OF 500,000 SHARES BEING RECEIVED BY THE ISSUER WITHIN 180 DAYS OF THE EFFECTIVE DATE OF FEBRUARY 20, 1990. FURTHER PARTICULARS OF THE MINIMUM SUBSCRIPTION ARE DISCLOSED ON PAGE 2 UNDER THE CAPTION "MINIMUM SUBSCRIPTION".

WE, AS AGENTS, CONDITIONALLY OFFER THESE SECURITIES SUBJECT TO PRIOR SALE, IF, AS AND WHEN ISSUED BY THE ISSUER AND ACCEPTED BY US IN ACCORDANCE WITH THE CONDITIONS CONTAINED IN THE AGENCY AGREEMENT REFERRED TO UNDER "PLAN OF DISTRIBUTION" ON PAGE 2 OF THIS PROSPECTUS.

AGENTS

PROSPECTUS SUMMARY

The information in this summary is qualified in its entirety by the more detailed information appearing elsewhere in this Prospectus.

Offering

500,000 common shares at \$0.50 per share (See Item 2).

Issuer

SARABAT GOLD CORPORATION is engaged in the acquisition, exploration and development of natural resource properties and has options to acquire a 100% undivided interest in two groups of mineral claims, the Bellex Property and the Gecko Property, both located in the Liard Mining Division of the Province of British Columbia and collectively referred to herein as the "ICY Property" more particularly described in Item 5, page 5.

Use of Proceeds

The net proceeds of \$227,500 to be received by the Issuer from this offering together with cash on hand of \$735 as at the date of this Prospectus will be used to pay estimated issue costs of \$15,000; to pay current liabilities of \$25,572; to carry out an exploration program on the Issuer's ICY Property at an estimated cost of \$100,000; to make an option payment of \$20,000 on the ICY Property; and to provide the Issuer with working capital in the amount of \$67,663 (See Item 2), page 3.

Directors and Management

Ralph Shearing	Director, President, Chief Executive and Financial Officer
Ronald Binns	Director
Gary Powell	Director
Juliette Rhodes	Secretary

(See Directors and Officers, Item 9, page 12)

Risk Factors

The shares offered herein are considered speculative due to the Issuer's business and its present stage of development. Mineral properties in which the Issuer has an interest are in the exploration stage only and are without a known body of commercial ore. Based upon the balance sheet as at November 30, 1989 which forms a part of this Prospectus, and after taking into account the sale of the Shares and deducting the Agents' commission, the net book value per Share will be \$0.1789, representing a dilution of \$0.3211 per Share or 64.22%. A prospective investor should carefully consider the matters referred to under "Risk Factors" in Item 6, page 11.

(1) PLAN OF DISTRIBUTION

The Issuer by its Agents hereby offers on a "best efforts" basis (the "Offering") to the public through the facilities of the Vancouver Stock Exchange (the "Exchange") 500,000 shares (the "Shares") of the Issuer at a price of \$0.50 per share. The Offering will be made in accordance with the rules and policies of the Exchange on a day (the "Offering Day") determined by the Agents and the Issuer, with the consent of the Exchange, within a period of 180 days from the date of issuance of a receipt for this Prospectus (the "Effective Date") by the Superintendent of Brokers for British Columbia (the "Superintendent").

The Vancouver Stock Exchange has conditionally listed the securities being offered pursuant to this Prospectus. Listing is subject to the Issuer fulfilling all the listing requirements of the Exchange on or before August 20, 1990, including prescribed distribution and financial requirements.

Appointment of Agents

The Issuer, by an agreement (the "Agency Agreement") dated for reference December 29, 1989 appointed Wolverton Securities Ltd. as its agents (the "Agents") to offer the Shares through the facilities of the Exchange. The Agents will receive a commission of \$0.045 per share.

The Agents reserve the right to offer selling group participation in the normal course of the brokerage business to selling groups of other licenced broker-dealers, brokers and investment dealers, who may or may not be offered part of the commissions or bonuses derived from this Offering.

The obligations of the Agents under the Agency Agreement may be terminated prior to the day the Shares are listed, posted and called for trading on the Exchange at the discretion of the Agents on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events.

The Issuer has granted the Agents a right of first refusal to provide future equity financing to the Issuer for a period of 12 months from the Effective Date.

There are no payments in cash, securities or other consideration being made, or to be made, to a promoter, finder or any other person or company in connection with the Offering.

The directors, officers and other insiders of the Issuer may purchase shares from this Offering.

Minimum Subscription

This Offering is subject to a minimum of 500,000 shares being sold on the Offering Day. All subscription funds will be held in

trust by the Agents or the Issuer's Registrar and Transfer Agent until the minimum subscription has been attained. If the minimum of 500,000 shares is not sold on the Offering Day, all funds will be returned to the purchasers without deduction. If the minimum of 500,000 shares is sold and notice of the release of subscription funds is given to the Superintendent, the proceeds received will be paid to the Issuer less the commission payable to the Agents.

(2) USE OF PROCEEDS TO ISSUER

As at the date of this Prospectus, the Issuer has cash on hand of \$735. These funds together with net proceeds of \$227,500 to be received from this Offering will be used for the following purposes:

(a) To pay the balance of the cost of this issue, including legal, audit and printing costs estimated at....	\$ 15,000
(b) To pay accounts payable and accrued liabilities as at the date of this Prospectus....	\$ 25,572
(c) To carry out an exploration program on the Issuer's ICY property as recommended by Equity Engineering Ltd. in its Report dated November 1988....	\$ 100,000
(d) To make the option payment on the ICY Property due on the fifth business day after the shares of the Issuer are listed for trading on the Exchange....	\$ 20,000
(e) To provide working capital....	\$ <u>67,663</u>
TOTAL	\$ 228,235

The Issuer may, pursuant to the written recommendations of an independent qualified engineer or geologist, abandon in whole or in part any of its property, or may alter, as work progresses, a recommended work program or may make arrangements for the performance of all or any portion of a work program by other persons or companies and may use any money so diverted for the purpose of acquiring, exploring or developing other properties, although the Issuer has no present plans in this regard. If any such event occurs during the distribution of the Shares, an amendment to this Prospectus will be filed. If any such event occurs after the distribution of the Shares, shareholders will be notified.

No part of the proceeds will be used to invest, underwrite or trade in securities other than those that qualify as investments in which trust funds may be invested under the laws of the jurisdictions in which the securities offered by this Prospectus may lawfully be sold. Should the Issuer intend to use the proceeds to acquire other than trustee-type securities, approval

by the shareholders of the Issuer must first be obtained and notice of the intention must be filed with the regulatory authorities having jurisdiction over the sale of the securities offered by this Prospectus.

(3) SHARE CAPITAL STRUCTURE

The authorized capital of the Issuer consists of 25,000,000 common shares without par value, of which 1,205,001 common shares are issued and outstanding. All shares of the Issuer, including those offered by this Prospectus, are common shares, they are not subject to any future call or assessment, and they all have equal voting rights. There are no special rights or restrictions of any nature attached to any of the shares, and they all rank pari passu, each with the other, as to all benefits which might accrue to the holders of the shares.

<u>Designation of Shares</u>	<u>Shares authorized</u>	<u>Outstanding on date of balance sheet herein</u>	<u>Outstanding on date of Prospectus</u>	<u>Outstanding after Offering</u>
Common	25,000,000	1,205,001	1,205,001	1,727,001*

*Including the issuance of 15,000 shares to Gecko Management Ltd. on the Effective Date of this Prospectus and 7,000 shares to Bellex Mining Corp. within 30 days after the Effective Date as part consideration for the Issuer's interest in the ICY Property - see Item 5.

The Issuer's deficit as of November 30, 1989 is \$82,679.

Shares Sold for Cash at the Date of this Prospectus

<u>No. of Shares</u>	<u>Price</u>	<u>Commission Paid</u>	<u>Cash Received</u>
1	\$1.00	Nil	\$ 1
455,000 **	0.35	Nil	159,250
750,000 ***	0.01	Nil	7,500
<u>1,205,001</u>			<u>\$ 166,751</u>

** Proceeds from the sale of 192,500 of these shares were expended on preliminary exploration of the Issuer's ICY Property and eligible Canadian Exploration Expenses, as defined in the Income Tax Act (Canada), were incurred on behalf of the purchasers. Tax benefits arising from the Canadian Exploration Expenses are not deductible by the Issuer but flow through directly to the purchasers.

*** These shares are subject to an escrow agreement (See Item 13).

(4) NAME AND INCORPORATION OF ISSUER

The Issuer was incorporated under the name 344472 B.C. Ltd. under the laws of the Province of British Columbia on April 28, 1988 by

registration of its Memorandum and Articles. On July 11, 1988, the Issuer changed its name to Sarabat Gold Corporation. The address of the head office of the Issuer is Suite 840 - 650 West Georgia Street, Vancouver, B.C. Its registered office is located at Suite 2800 - 666 Burrard Street, Vancouver, B.C. and its records office is located at 830 - 625 Howe Street, Vancouver, B.C.

(5) DESCRIPTION OF BUSINESS AND PROPERTY OF ISSUER

The Issuer is engaged in the acquisition, exploration and development of natural resource properties and has an interest in the properties described below.

Bellex Property

The Bellex Property, consisting of 40 units covering an area of approximately 975 hectares, is composed of the following two mineral claims located in the Liard Mining Division of the Province of British Columbia:

<u>Claim Name</u>	<u>Record Number</u>	<u>Expiry Date</u>
JW 1	4271	October 20, 1993
JW 3	4335	November 9, 1993

The Issuer's interest in the Bellex Property is by way of an option agreement dated for reference June 15, 1988 with Bellex Mining Corp. ("Bellex") of 907 - 510 Burrard Street, Vancouver, British Columbia, and amended by agreement dated July 25, 1989. Bellex acquired its interest in the mineral claims from Keyport Management Corp. ("Keyport") and Antioch Investments Ltd. ("Antioch") pursuant to an agreement dated for reference June 1, 1988 and amended July 25, 1989. To earn a 100% interest, subject to a net smelter return of 3/4% payable to Bellex and of 1-3/4% to Keyport and Antioch jointly, the Issuer is required:

- (a) to pay to Bellex cash consideration of \$3,500 on execution of the option agreement (paid), \$10,000 on June 15, 1992 and \$20,000 each June 15 thereafter until the Property is placed in commercial production;
- (b) to incur preproduction expenditures on the Property of:
 - A. \$20,000 by June 15, 1989 (done);
 - B. \$50,000 by June 15, 1990;
 - C. \$120,000 by June 15, 1991; and
 - D. \$160,000 by June 15, 1992.

These amounts are not cumulative and the Issuer has carried out expenditures to date in the approximate

amount of \$68,000 which includes the amount required to be incurred pursuant to subclause A above; and

- (c) Subject to the approval of the Exchange and the British Columbia Securities Commission to issue to Bellex 77,000 shares of the Issuer, as to 7,000 shares within 30 days after the Effective Date of this Prospectus, 10,000 shares within 3 months after completion of the expenditures referred to in subclause B above, 20,000 shares within 9 months after completion of the expenditures referred to in subclause B above, 20,000 shares within 3 months after completion of the expenditures referred to in subclause C above, and 20,000 shares within 3 months after completion of the expenditures referred to in subclause D above.

The option agreement shall automatically terminate if the Issuer fails to make the option payments and incur the exploration expenditures provided for in the option agreement or if the Issuer's shares are not listed for trading on the Exchange by March 31, 1990. If the Issuer is otherwise in default of the terms of the option agreement, the agreement may be terminated by Bellex 30 days following notice of termination unless the Issuer has cured or commenced to cure such default.

Because the Bellex Property option is subject to the agreement between Bellex, Keyport Management Corp. and Antioch Investments Ltd. remaining in good standing, those three companies have entered into an agreement with the Issuer dated July 25, 1989 which provides that if their agreement is terminated, Keyport Management Corp. and Antioch Investments Ltd. will enter into an agreement with the Issuer on the same terms as the Issuer's agreement with Bellex and the Issuer will be given credit for all cash payments it has made, all shares it has issued and all work it has carried out to the date that such agreement is entered into. At any time up to the 60th month following the month in which commercial production takes place, the Issuer may purchase the 1-3/4% net smelter return payable to Keyport and Antioch for the purchase price of \$1,500,000 to which shall be credited the total cash payment made by the Issuer prior to commercial production.

Gecko Property

The Gecko Property, consisting of 45 units covering an area of approximately 1,075 hectares, is composed of the following mineral claims located in the Liard Mining Division of the Province of British Columbia:

<u>Claim Name</u>	<u>Record Number</u>	<u>Expiry Date</u>
IC I	4645	June 13, 1993
IC II	4646	June 13, 1994
PS I	4647	June 13, 1994

The Issuer's interest in the Gecko Property is by way of an option agreement dated for reference the 15th day of July, 1988 with Gecko Management Ltd. ("Gecko") of 503 - 850 Burrard Street, Vancouver, British Columbia as amended by agreements dated May 31, 1989 and September 30, 1989. To earn a 100% interest, subject to a 2-1/2% net smelter return payable to Gecko, the Issuer is required:

- (a) to pay to Gecko cash consideration of \$10,000 on execution of the option agreement (paid), \$20,000 on the fifth business day after the shares of the Issuer are listed for trading on the Exchange, \$30,000 on October 1, 1990, and \$50,000 each October 1 thereafter until the Property is placed in commercial production;
- (b) to incur preproduction expenditures on the Property of:
 - A. \$10,000 by October 1, 1989 (done);
 - B. \$60,000 by October 1, 1990;
 - C. \$120,000 by October 1, 1991; and
 - D. \$160,000 by October 1, 1992;

These amounts are not cumulative and the Issuer has carried out expenditures to date in the amount of \$10,000; and

- (c) subject to the approval of the Exchange and the British Columbia Securities Commission to issue to Gecko 200,000 shares of the Issuer, as to 15,000 shares on the Effective Date of this Prospectus, 35,000 shares within 3 months after preproduction expenditures of \$20,000 have been incurred, 50,000 shares within 3 months after completion of the expenditures referred to in subclause B above, and 100,000 shares within 3 months after completion of the expenditures referred to in subclause C above;

At any time up to the sixtieth month following the month in which commercial production takes place, the Issuer may purchase the 2-1/2% net smelter return payable to Gecko for the purchase price of \$1,500,000 to which shall be credited the total cash payments made by the Issuer to Gecko prior to commercial production. The option agreement with Gecko shall automatically terminate if the Issuer fails to make the option payments and incur the exploration expenditures provided for in the option agreement or if the Issuer's shares are not listed for trading on the Exchange by March 31, 1990. If the Issuer is otherwise in default of the terms of the option agreement, Gecko may terminate the agreement unless within 30 days following notice of termination, the Issuer has cured or commenced to cure such default.

Bellex and Gecko Properties

In respect of the Bellex Property and Gecko Property (herein collectively referred to as the "ICY Property"), the Issuer will be required to raise additional funds in order to satisfy future property payments and work commitments under the option agreements which are not provided for out of proceeds from this Offering. There is no guarantee that the Issuer will be able to raise such additional funds.

Any lands acquired by either the Issuer or Bellex within a 3 kilometer radius of the Bellex Property shall, at the election of the other party, be deemed to be a part of the Bellex Property and become subject to the terms of the option agreement.

Gecko is a non-reporting British Columbia company, all of the issued and outstanding shares of which are owned by Paul Chung of 2020 No. 4 Road, Richmond, B.C. Bellex is a British Columbia reporting company whose shares are traded on the Exchange. For geological consulting services provided to the Issuer in connection with the acquisition of the JW 1 and 3 mineral claims, the Issuer has paid Gecko the sum of \$8,000. The Issuer, its insiders and their associates and affiliates are at arm's length to Bellex, Gecko, Keyport Management Corp. and Antioch Investments Ltd. and their insiders, and associates and affiliates thereof.

The Issuer has obtained from Equity Engineering Ltd. a report on the ICY Property dated November 1988 (the "Report") which is available for inspection at the Issuer's registered office, 2800 - 666 Burrard Street, Vancouver, British Columbia. According to the Report, an extract of which is attached to and forms a part of this Prospectus, the ICY Property consists of 85 units and covers favourable gold geochemistry on the northern branch of Jack Wilson Creek located in the Liard Mining Division approximately 180 kilometers northwest of Stewart and 80 kilometers south of Telegraph Creek in northwestern British Columbia. Access to the ICY Property is provided by helicopter from the Scud River airstrip which is located approximately 18 kilometers to the northwest, or from the Bronson Creek airstrip which is located approximately 65 kilometers to the southeast. Fixed-wing aircraft fly charters from Smithers, Dease Lake and Telegraph Creek to the Scud River airstrip and scheduled flights from Smithers to the Scud River airstrip via the Bronson Creek airstrip during the field season. On the Alaska side of the border, Wrangell lies approximately 90 kilometers to the southwest, and provides a full range of services and supplies, including a major commercial airport. The Stikine River has been navigated by 100-ton barges upriver as far as Telegraph Creek, allowing economical transportation of heavy machinery and fuel to within 10 kilometers of the property.

Kennco Explorations Limited explored the southern part of the JW 1 claim for its copper potential following the discovery of the Galore Creek copper-gold porphyry deposit in 1955. In 1959, during the course of a regional stream sediment geochemistry survey, Kennco sampled a narrow quartz-pyrite vein in the North Fork Creek canyon of what is now the JW 1 claim. This sample assayed 3.3 ounces gold per ton (113 grams gold per tonne), but follow-up work the following year failed to duplicate this sample. From 1963 to 1965, Kennco conducted geological mapping, induced polarization surveys, hand-trenching and soil geochemistry to determine whether copper occurrences found along North Fork Creek were part of a larger copper porphyry deposit. Most of this work was conducted immediately south of the JW 1 claim. At the same time, Conwest Explorations Ltd. conducted regional mapping and sampling on their CW claims, which surrounded the Kennco ground, covering parts of all the claims currently grouped in the ICY Property.

No further work is recorded on the ICY Property until 1981 when Teck Corporation staked the Tough claim to cover anomalous gold and copper values received from the north branch of Jack Wilson Creek during a regional stream sediment geochemistry survey. The source for the gold and copper anomalies was not discovered during limited follow-up work and the claims were allowed to lapse.

The JW 1 and JW 3 claims were staked in October 1987 on the basis of the Teck geochemical data. The IC I, IC II and PS I claims were staked in June 1988.

During August and September of 1988, the Issuer carried out a preliminary exploration program on the ICY Property at a cost of \$78,192. The program consisted of geological mapping, prospecting, stream sediment geochemistry and soil geochemistry and was targeted at gold-rich quartz-pyrite veins similar to that sampled by Kennco Explorations Limited in 1959 on what is now the JW 1 Claim and those occurring in similar geological environments to the south in the Iskut River, Sulphurets and Stewart Mining Districts. The following discussion relating to the Issuer's preliminary exploration program is extracted from the Report:

"Stream sediment sampling proved effective in signalling the presence of gold mineralization along each of the headwater tributaries of the North Fork of Jack Wilson Creek. To date, however, no adequate source has been found to explain the anomalous gold values returned from Creek #20, which drains the IC II claim.

The soil geochemical results, with values up to 490 parts per billion gold and 6290 parts per million copper, will prove useful in directing future prospecting and sampling on the ICY Property. To date, no soil samples have been taken from the Creek #20 drainage or from the western side of North Fork Creek, both of which have been shown to be anomalous by stream sediment sampling.

Significant gold mineralization has been discovered in all the drainages which form the headwaters of North Fork Creek, presenting two distinct exploration targets: copper-gold porphyry and quartz-sulphide vein deposits. Porphyry copper-gold mineralization, possibly hosting higher-grade veins, may explain a large copper-gold soil geochemical anomaly centered on North Fork Creek a few hundred meters south of the JW 1 claim and extending northward onto the ICY property. There is little rock exposure within that soil geochemical anomaly, but one trenched creek exposure was reported to grade 0.76% copper over a sample length of 13.1 meters (BCDM Annual Report, 1965). A 50 centimeter sample within that trench assayed 1.64% copper with 0.058 ounce/ton (1.99 grams per tonne) gold. On the JW 1 claim, gold values occur in several zones of alteration and pyritization without associated veining, including one grab sample over five meters in Creek #14 which assayed 0.248 ounce/ton (8.50 grams per tonne) gold. The extent and significance of these gold-bearing alteration zones and their potential for large-tonnage porphyry-style deposits is not yet clear.

Narrow gold-rich quartz-chlorite-pyrite-magnetite-chalcopyrite veins with widths up to two meters and grades in excess of ten grams gold per tonne have been discovered in several locations throughout the headwaters of North Fork Creek. Four zones, in particular, show great promise. The Fourteen Vein, located at the junction of Creek #14 with North Fork Creek, yielded grab samples grading up to 4.380 ounces/ton (150.2 grams per tonne) gold. The Boundary Zone, a silicified shear zone located 500 meters downstream, assayed 0.329 ounce/ton (11.27 grams per tonne) gold in a chip sample across 3.4 meters. The Float Zone consists of several gold rich sulphide boulders not yet located in place. The Cliff Vein, a thirty centimeter to one meter wide vein, assayed up to 0.420 ounce/ton (14.4 grams per tonne) gold. The strike and depth potential of these veins has not yet been tested.

To date, prospecting, mapping and sampling have been concentrated on the JW 1 claim, and all significant mineralization has been discovered there. The potential of the other claims remains almost untested."

Equity Engineering Ltd. has recommended an exploration program consisting of soil geochemistry, prospecting, geological mapping and hand trenching to continue the property-wide exploration begun in 1988 and allow for better definition of the mineralized structures discovered during that program. The exploration program is estimated to cost \$100,000 and will be carried out with proceeds from this Offering. G. H. Rayner & Associates Limited has been retained by the Issuer to provide an independent evaluation of the field data obtained during the 1988 exploration program and to make recommendations for future exploration. A copy of its report dated December 14, 1988 also forms a part of

this Prospectus and confirms the recommendations of Equity Engineering Ltd.

No underground exploration has been carried out on the ICY Property and it contains no surface or underground plant and equipment. The property is without a known body of commercial ore and the proposed program is an exploratory search for ore.

Snow Property

The Snow Property consists of 4 contiguous claim blocks (Snow 1-4, Record No. 5822 to 5825), which total 80 units. The property, which borders the north shore of Scud River, lies 12 kilometers north of the Issuer's Bellex and Gecko properties in the Liard Mining Division of British Columbia.

The claims are underlain by a Middle Jurassic medium grained hornblende biotite granodiorite and an Early Jurassic medium grained potassium feldspar, megacrystic hornblende quartz monzonite.

The property was staked in February of 1989 to cover two creeks which returned highly anomalous values in copper, gold, tin and arsenic from a government regional silt sample survey conducted in the Galore Creek area.

The Issuer has carried out assessment work of approximately \$8,500 which, when filed, will maintain the claims in good standing until February 1991. No proceeds of this issue are anticipated to be used in exploration of the Snow Property.

(6) RISK FACTORS

The securities offered hereby are speculative investments. A prospective investor should carefully consider the following risk factors:

The ICY Property, in which the Issuer has an interest only by way of option, consists of recorded mineral claims which have not been surveyed and therefore their precise location and area could be in doubt. If the Issuer fails to pay the cash and share consideration or to incur exploration expenditures as provided for in the ICY Property option agreements, the option agreements will terminate and the Issuer will forfeit its interest in the ICY Property.

The ICY Property is in the exploration stage only and is without a known body of commercial ore. The Issuer's business is subject to risks normally encountered in mineral resource exploration and development. The profitability of the Issuer's business and the market value of the Shares will be related to the success the Issuer experiences in exploration and development of resource properties. Mineral exploration and development involve significant risk and while the rewards if an ore body is

discovered may be substantial, few properties which are explored are ultimately developed into producing mines. Substantial expenditures may be required to establish ore reserves through drilling, to develop metallurgical processes to extract the metals from the ore and to construct the mining and processing facilities at any site chosen for mining. No assurance can be given that current exploration programs will result in any commercial mining operation.

The mining industry in general is intensely competitive and there is no assurance that even if commercial quantities of ore are discovered, a ready market will exist. Factors beyond the control of the Issuer, such as government regulations relating to royalties, allowable production, importing and exporting of minerals, environmental protection and other matters, may affect the marketability of any substances discovered.

Dilution

Subscribers for the Shares offered by this Prospectus will suffer immediate dilution. Based upon the balance sheet as at November 30, 1989 which forms a part of this Prospectus, and after taking into account the sale of the Shares and deducting the Agents' commission, the net book value per Share will be \$0.1789, representing a dilution of \$0.3211 per Share or 64.22%.

(7) PROMOTERS

Ralph Shearing is the promoter of the Issuer and has purchased 750,000 shares of the Issuer at the price of \$0.01 per share (which shares are escrowed to the order of the Superintendent or the Exchange), 1 share at the price of \$1.00, and 40,000 shares at the price of \$0.35 per share. Ralph Shearing has been granted an option to purchase up to 85,250 shares in the capital of the Issuer at the price of \$0.50 per share within five years after the Effective Date of this Prospectus so long as he continues to be a director of the Issuer.

(8) LEGAL PROCEEDINGS

The Issuer is not party to any legal proceedings, nor are any such proceedings anticipated.

(9) DIRECTORS AND OFFICERS

The names, addresses and positions of the directors and officers of the Issuer and the principal occupations in which they have been engaged for the past five years are as follows:

<u>Name & Address</u>	<u>Position with Issuer</u>	<u>Principal Occupation for the past 5 years</u>
Ralph Edward Shearing, F.G.A.C. 3433 West 12th Ave. Vancouver, B.C.	Director, President, Chief Executive and Financial Officer	Professional Geologist; Director and Secretary of Quest Canada Exploration Services Inc. and Director of Quest Canada Drilling Ltd.; Director and/or officer of four other reporting issuers - Goldfinch Minerals Ltd. until July/85, Samarkand Resources Inc. since June/87, Harrisburg-Dayton Resources Ltd. since Sept./87, and GBX Resource Corporation since Sept./87
Ronald Wayne Binns, C.A. Suite 3202 5 Concorde Place Toronto, Ontario	Director	Vice-President Finance and Chief Financial Officer, Franco-Nevada Mining Corp. and Euro-Nevada Mining Corporation since Aug./89, Chief Financial Officer for Noramco Mining Corp. Jan/89 to Aug./89, Treasurer, Breakwater Resources June/87 to December/88, Manager, Coopers & Lybrand Sept./81 to June/87, also a director of Samarkand Resources Inc. since November/87
Gary Emerson Powell 819 West 70th Ave. Vancouver, B.C.	Director	Sales Representative, Cathay Pacific Airways Ltd. since March/86, director of Samarkand Resources Inc. since Dec. 31/86, previously with Air Canada
Juliette Rhodes Site 24, Comp 11 R.R. #1 Castlegar, B.C.	Secretary	General Manager, Quest Canada Aviation Inc., previously Admin. Asst. and Geological Asst.

Ralph Shearing, Ronald Binns and Gary Powell are also directors and/or officers of other companies whose principal business is the acquisition, exploration and development of resource properties. It is possible, therefore, that a conflict may arise between their duties as directors or officers of the Issuer and their duties as directors or officers of such other companies. All such conflicts will be disclosed by them in accordance with the Company Act, and they will govern themselves in respect thereof to the best of their abilities in accordance with the obligations imposed upon them by law. Due to the present stage

of the Issuer's development, Ralph Shearing, as President and Chief Executive Officer, is not required to devote his full time to the affairs of the Issuer. However, he will devote whatever time is required to ensure that the Issuer's affairs are properly managed.

(10) EXECUTIVE COMPENSATION

The Issuer has one executive officer. As a director, he has been granted an option to purchase up to 85,250 shares in the capital of the Issuer at the price of \$0.50 per share exercisable at any time within five years after the Effective Date of this Prospectus. Since its incorporation, the Issuer has not paid any cash compensation or other form of compensation to its executive officer and does not presently intend to pay any such compensation.

(11) OPTIONS TO PURCHASE SECURITIES

The Issuer has granted options to purchase up to 170,500 shares in the capital of the Issuer to its directors and an employee as set out below at the price of \$0.50 per share to be exercised within five years after the Effective Date of this Prospectus. The options are not assignable and terminate if the optionee ceases to be a director or an employee of the Issuer.

<u>Optionee</u>	<u>No. of Shares under Option</u>
Ralph Shearing, Executive Officer	85,250
Ronald Binns, Director	10,000
Gary Powell, Director	10,000
Juliette Rhodes, Employee	<u>65,250</u>
Total	170,500

(12) ESCROWED SHARES

<u>Designation of Shares</u>	<u>Number of Shares Held in Escrow</u>	<u>% of Issued Shares</u>
Common	750,000	62%

There are 750,000 common shares of the Issuer held in escrow by Pacific Corporate Services Ltd. of 830 - 625 Howe Street, Vancouver, British Columbia, pursuant to an agreement dated March 21, 1989, (the "Escrow Agreement"), which are subject to the direction or determination of the Superintendent or the Exchange. The shares may not be traded in or dealt with in any other manner whatsoever without the prior written consent of the Superintendent or the Exchange and will be released on a pro rata basis at the discretion of the Superintendent or Exchange. Any shares not released at the end of ten years from the Effective Date of this Prospectus shall be cancelled.

(13) PRINCIPAL HOLDERS OF SECURITIES

As at the date of this Prospectus, the following persons own 10% or more of the issued shares of the Issuer:

<u>Name & Address</u>	<u>Class of Shares</u>	<u>Type of Ownership</u>	<u>No. of Shares</u>	<u>% of Issued Shares</u>
Ralph Shearing 3433 West 12th Ave. Vancouver, B.C.	Common	direct, of record and beneficial	790,001	65.5%

The number and percentage of shares of the Issuer beneficially owned, directly or indirectly, as of the date of this Prospectus, by all directors and senior officers of the Issuer, as a group, are:

<u>Designation of Class</u>	<u>Number of Shares Beneficially Owned</u>	<u>Percentage of Class</u>
Common	810,001	67.2%

An Underwriter, as defined in Local Policy 3-30 of the British Columbia Securities Commission, purchased 10,000 common shares of the Issuer at the price of \$0.35 per share. The Underwriter has undertaken not to sell such shares prior to the expiry of six months from the date of listing of the Issuer's shares on the Exchange.

(14) PRIOR SALES

Reference should be made to Item 3, Share Capital Structure, for particulars of shares sold for cash prior to the date of this Prospectus.

(15) INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as elsewhere disclosed in this Prospectus, the directors, senior officers and principal shareholders of the Issuer and their respective affiliates and associates have no material interest in any transaction or proposed transaction which has or will materially affect the Issuer.

(16) AUDITORS, TRANSFER AGENTS AND REGISTRARS

The Auditor of the Issuer is Jerry A. Minni, Certified General Accountant, of 1104-750 West Pender Street, Vancouver, British Columbia, V6C 2T8.

The Transfer Agent and Registrar of the shares of the Issuer is Pacific Corporate Services Ltd., 830 - 625 Howe Street, Vancouver, B.C.

(17) MATERIAL CONTRACTS

Since its incorporation, the Issuer has entered into the following material contracts:

- (a) Option Agreement dated June 15, 1988 as amended July 25, 1989, respecting the acquisition of the Issuer's interest in the Bellex Property as discussed in Item 5.
- (b) Option Agreement dated July 15, 1988 as amended May 31, 1989 and September 30, 1989 respecting the acquisition of the Issuer's interest in the Gecko Property as discussed in Item 5.
- (c) Agreement dated July 25, 1989 between Antioch Investments Ltd. ("Antioch"), Keyport Management Corp. ("Keyport"), Bellex and the Issuer amending the option agreement dated June 1, 1988 between Antioch, Keyport and Bellex whereby Bellex acquired its interest in the Bellex Property and granting the Issuer certain rights in the event of termination of that option agreement.
- (d) Escrow Agreement dated March 21, 1989 as disclosed in Item 13.
- (e) Agency Agreement dated December 29, 1989 between the Issuer and the Agent and referred to in Item 1.
- (f) Director and Employee Incentive Stock Option Agreement dated March 21, 1989 referred to in Item 12.
- (g) Agreement dated November 1, 1988 appointing Prosource Management Ltd. to provide administrative and corporate services to the Issuer at a fee of \$2,000 per month. Prosource Management Ltd. is at arm's length to the Issuer and its insiders.

During distribution of the securities offered hereby, all contracts may be inspected at the Issuer's Registered Office during normal business hours.

(18) OTHER MATERIAL FACTS

There are no material facts relating to the securities offered herein other than as previously disclosed in this Prospectus.

(19) STATUTORY RIGHTS OF RESCISSION AND WITHDRAWAL

The Securities Act provides a purchaser with a right to withdraw from an agreement to purchase securities within two business days after receipt or deemed receipt of a prospectus, and further provides a purchaser with remedies for rescission or damages where the prospectus and any amendment contains a material

misrepresentation or is not delivered to the purchaser prior to delivery of the written confirmation of sale or prior to midnight on the second business day after entering into the agreement, but such remedies must be exercised by the purchaser within the time limit prescribed. For further information concerning these rights and the time limits within which they must be exercised, the purchaser should refer to Sections 66, 114, 118 and 124 of the Securities Act or consult a lawyer.

AUDITOR'S REPORT

To The Directors,
Sarabat Gold Corporation

I have examined the balance sheet of SARABAT GOLD CORPORATION as at November 30, 1989 and February 28, 1989 and the statements of deferred exploration, loss and deficit and changes in financial position for the period April 28, 1988, (date of incorporation) to November 30, 1989. My examination was made in accordance with generally accepted auditing standards, and accordingly included such tests and other procedures as I considered necessary in the circumstances.

In my opinion, these financial statements present fairly the financial position of the Company as at November 30, 1989 and February 28, 1989 and the results of its operations and changes in its financial position for the period April 28, 1988 (date of incorporation) to November 30, 1989 in accordance with generally accepted accounting principles.

SARABAT GOLD CORPORATION
 NOTES TO FINANCIAL STATEMENTS
 NOVEMBER 30, 1989

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Deferred Exploration

a) Exploration costs relating to mineral properties are deferred until the properties are brought into production, at which time the deferred costs are to be amortized on a unit of production basis, or until the properties are abandoned or sold, at which time the deferred cost are written off.

The amounts shown as mineral properties and deferred exploration represent unamortized costs to date and do not necessarily reflect present or future values.

During the period ending February 28, 1989, the Company incurred \$67,375 of exploration and development costs on behalf of shareholders pursuant to flow-through share subscription agreements. The Tax advantage applicable to \$67,375 of exploration costs incurred by the Company are available to the subscribers of shares and not to the Company.

b) General and Administrative Expenses

The Company charges all general and administrative expenses not directly related to exploration activities to operations as incurred.

2. MINERAL PROPERTIES

	<u>ICY Group</u>	<u>Snow Claims</u>	<u>Total</u>
Acquisition costs	\$ 13,500	\$ 2,530	\$ 16,030
	=====	=====	=====

ICY Group

Pursuant to an agreement dated July 15, 1988, and amended May 31, 1989 and September 30, 1989 the Company was granted an option to acquire a 100% interest in the IC claims consisting of 3 claims situated in the Liard Mining Division, Province of British Columbia.

ICY Group -- Continued

The claims are subject to a 2 1/2 net smelter return on all substances mined and removed from the claims. The Company has the right under the agreement to buy out the net smelter return for \$1,500,000 within 5 years following the month in which the commencement of commercial production takes place from the claims.

In addition the Company has agreed to incur the following expenditures and make the following payments and issue the following shares to the vendor:

<u>Expenditure Amount</u>	<u>Expenditure Due Date</u>
\$ 10,000	October 1, 1989 (Completed).
60,000	October 1, 1990.
120,000	October 1, 1991.
160,000	October 1, 1992.

<u>Payment Amount</u>	<u>Payment Due Date</u>
\$ 10,000	July 15, 1988 (Paid).
20,000	Within 5 business days of the Company being listed on the Vancouver Stock Exchange.
30,000	October 1, 1990.
50,000	October 1, 1991 and every year thereafter until the property is put into commercial production.

<u>Number of Shares</u>	<u>Share Issue Date</u>
15,000	Upon receipt of prospectus by the regulatory authorities.
35,000	Within 3 months of completion of preproduction expenditures in the amount of \$20,000 by October 1, 1990, subject to approval by the regulatory authorities.

ICY Group -- Continued

<u>Number of Shares</u>	<u>Share Issue Date</u>
50,000	Within 3 months of completion of preproduction expenditures in the amount of \$50,000 by October 1, 1990, subject to approval by the regulatory authorities.
100,000	Within 3 months of completion of preproduction expenditures in the amount of \$120,000 by October 1, 1991, subject to approval by the regulatory authorities.

If the company terminates the agreement at any time prior to fulfilling its obligation it will not have earned any interest in the property and any expenditures made will be forfeited.

Pursuant to an agreement dated June 15, 1988 and amended July 25, 1989, the Company was granted an option to acquire a 100% interest in the JW claims consisting of 2 claims situated in the Liard Mining Division, Province of British Columbia.

The claims are subject to a 2 1/2% net smelter return on all substances mined and removed from the claims. The Company has the right under the agreement to buy out 1 3/4% of the net smelter return for \$1,500,000 within 5 years following the month of in which the commencement of commercial production takes place from the claims.

In addition the the Company has agreed to incur the following expenditures and make the following payments and issue the following shares to the vendor:

<u>Expenditure Amount</u>	<u>Expenditure Due Date</u>
\$ 20,000	June 15, 1989 (Completed).
50,000	June 15, 1990.
120,000	June 15, 1991.
160,000	June 15, 1992.

ICY Group -- Continued

<u>Payment Amount</u>	<u>Payment Due Date</u>
\$ 3,500	June 15, 1988 (Paid).
10,000	June 15, 1992.
20,000	June 15, 1993 and every year, thereafter until the property is put into commercial production.

<u>Number of Shares</u>	<u>Payment Due Date</u>
7,000	Within 30 days's of a receipt of prospectus by the regulatory authorities.
10,000	Within 3 months of completion of preproduction expenditures in the amount of \$50,000 by June 15, 1990, subject to approval by the regulatory authorities.
20,000	Within 9 months of completion of preproduction expenditures in the amount of \$50,000 by June 15, 1990, subject to approval by the regulatory authorities.
20,000	Within 3 months of completion of preproduction expenditures in the amount of \$120,000 by June 15, 1991, subject to approval by the regulatory authorities.
20,000	Within 3 months of completion of preproduction expenditures in the amount of \$160,000 by June 15, 1992, subject to approval by the regulatory authorities.

If the Company terminates the agreement at any time prior to fulfilling its obligation it will not have earned any interest in the property and any expenditures made will be forfeited.

The combined claims are known as the ICY Group.

Snow Claims

During the period ending November 30, 1989 the Company staked 4 claims in the Liard Mining Division, province of British Columbia at a cost of \$2,530.

3. SHARE CAPITAL

a) Authorized

25,000,000 common shares without par value.

b) Issued

	<u>Number of Shares</u>	<u>Amount</u>
Issued for cash	1,205,001 =====	\$ 166,751 =====

c) Shares Held in Escrow

At November 30, 1989, 750,000 shares of the Company are subject to an escrow agreement and may not be transferred, assigned or otherwise dealt with without the consent of the regulatory body having jurisdiction thereon.

d) Stock Options

Stock options were granted to directors and employees of the Company to acquire in total 170,500 shares at \$.50 per share. The options are exercisable within a period of five years from the effective date of the prospectus.

4. FILING OF PROSPECTUS

The Company intends to file a prospectus with the regulatory authorities of British Columbia constituting an offering to the public of 500,000 common shares of the Company at \$.50 per share. The regulatory authorities of British Columbia have not approved the prospectus as of December 11, 1989.

5. INCORPORATION

The Company was incorporated on April 28, 1988 under the laws of British Columbia as 344472 B.C. Ltd. and commenced operations on that date. On July 11, 1988 the Company changed its name to Sarabat Gold Corporation.

1.0 INTRODUCTION

The ICY claim group, consisting of the JW 1, JW 3, IC I, IC II and PS I claims, was staked in October 1987 and June 1988 to cover favorable gold geochemistry on the northern branch of Jack Wilson Creek in the Liard Mining Division, approximately 180 kilometers northwest of Stewart in northwestern British Columbia (Figure 1). The ICY property was first explored by Kennco for its copper potential following the discovery of the Galore Creek copper-gold porphyry deposit eight kilometers to the southwest in 1955. A regional stream sediment geochemical survey conducted by Teck Corp. in 1980 revealed high gold values from the northern branch of Jack Wilson Creek. The numerous exploration successes in a similar geological setting approximately seventy kilometers to the south in the Iskut River district and the discovery in 1987 of several major precious metals occurrences on the Trophy project of Continental Gold Corp., fifteen kilometers east of the ICY property, has sparked renewed exploration interest throughout the Galore Creek area.

Preliminary exploration, consisting of geological mapping, prospecting and geochemical sampling, was carried out over the ICY property during August and September of 1988. Equity Engineering Ltd. conducted this program for Sarabat Gold Corporation and has been retained to report on the results of the fieldwork. G. H. Rayner & Associates Limited has been retained to provide an independent evaluation of the field data and set forth recommendations for future exploration.

2.0 LIST OF CLAIMS

Records of the British Columbia Ministry of Energy, Mines and Petroleum Resources indicate that the following claims,

PS I	4647	5	Chung	June 13, 1988	1989
		85			

The location of the legal corner posts for the JW 1 and 3 claims have been verified by field crews of Equity Engineering Ltd.

3.0 LOCATION, ACCESS AND GEOGRAPHY

The ICY claim group is located within the Coast Range Mountains approximately 180 kilometers northwest of Stewart and 80 kilometers south of Telegraph Creek in northwestern British Columbia (Figure 1). They lie within the Liard Mining Division, centered at 57° 12' north latitude and 131° 34' west longitude.

Access to the ICY property is provided by helicopter from the Scud River airstrip which is located approximately eighteen kilometers to the northwest, or from the Bronson Creek airstrip which is located approximately 65 kilometers to the southeast. Fixed-wing aircraft fly charters from Smithers, Dease Lake and Telegraph Creek to the Scud River airstrip and scheduled flights from Smithers to the Scud River airstrip via the Bronson Creek airstrip during the field season. On the Alaska side of the border, Wrangell lies approximately 90 kilometers to the southwest, and provides a full range of services and supplies, including a major commercial airport. The Stikine River has been

navigated by 100-ton barges upriver as far as Telegraph Creek, allowing economical transportation of heavy machinery and fuel to within ten kilometers of the property. Throughout the 1988 field season, a helicopter was stationed in Continental Gold Corp.'s camp approximately ten kilometers northwest of the ICY property.

The ICY claim group covers the headwaters of the north branch of Jack Wilson Creek (referred to as North Fork Creek in this report), Contact Creek, Galore Pup Creek and an unnamed creek which drains northerly into the Scud River. Topography is rugged, typical of mountainous and glaciated terrain, with elevations ranging from 450 meters in the North Fork Creek valley to 2200 meters on the unnamed peak situated on the PS I and IC II claims.

Lower slopes are covered by a dense growth of hemlock and spruce with an undergrowth of devil's club and huckleberry. Steeper open slopes are covered by dense slide alder growth. Above treeline, which occurs at approximately 1200 meters, more open alpine vegetation occurs. Both summer and winter temperatures are moderate although annual rainfall may exceed 200 centimeters and several meters of snow commonly fall at higher elevations.

4.0 PROPERTY MINING HISTORY

4.1 Previous Work

Kennco Explorations Limited explored the southern part of the JW 1 claim for its copper potential following the discovery of the Galore Creek copper-gold porphyry deposit in 1955. In 1959, during the course of a regional stream sediment geochemistry survey, Kennco sampled a narrow quartz-pyrite vein in the North Fork Creek canyon of what is now the JW 1 claim.

This sample assayed 3.3 ounces gold per ton (113 grams gold per tonne), but follow-up work the following year failed to duplicate this sample (G. Rayner, pers. comm.). From 1963 to 1965, Kennco conducted geological mapping, induced polarization surveys, hand-trenching and soil geochemistry to determine whether copper occurrences found along North Fork Creek were part of a larger copper porphyry deposit. Most of this work was conducted immediately south of the JW 1 claim (Rayner, 1963; Halloff, 1965). At the same time, Conwest Explorations Ltd. conducted regional mapping and sampling on their CW claims, which surrounded the Kennco ground, covering parts of all the claims currently grouped in the ICY property (Grant, 1964).

No further work is recorded on the ICY property until 1981 when Teck Corporation staked the Tough claim to cover anomalous gold and copper values received from the north branch of Jack Wilson Creek during a regional stream sediment geochemistry survey. The source for the gold and copper anomalies was not discovered during limited follow-up work and the claims were allowed to lapse.

The JW 1 and 3 claims were staked in October 1987 on the basis of the Teck geochemical data. The IC I, IC II and PS I claims were staked in June 1988 to cover favorable lithologies north of the JW 1 and 3 claims.

4.2 1988 Work Program

During August and September of 1988, Sarabat Gold Corporation carried out a preliminary exploration program on the ICY claim group, consisting of geological mapping, prospecting, stream sediment geochemistry and soil geochemistry. This program was targeted at gold-rich quartz-pyrite veins similar to that sampled by Kennco in 1959 on what is now the JW 1 claim and those occurring in similar geological environments to the south in the

Iskut River, Sulphurets and Stewart mining districts.

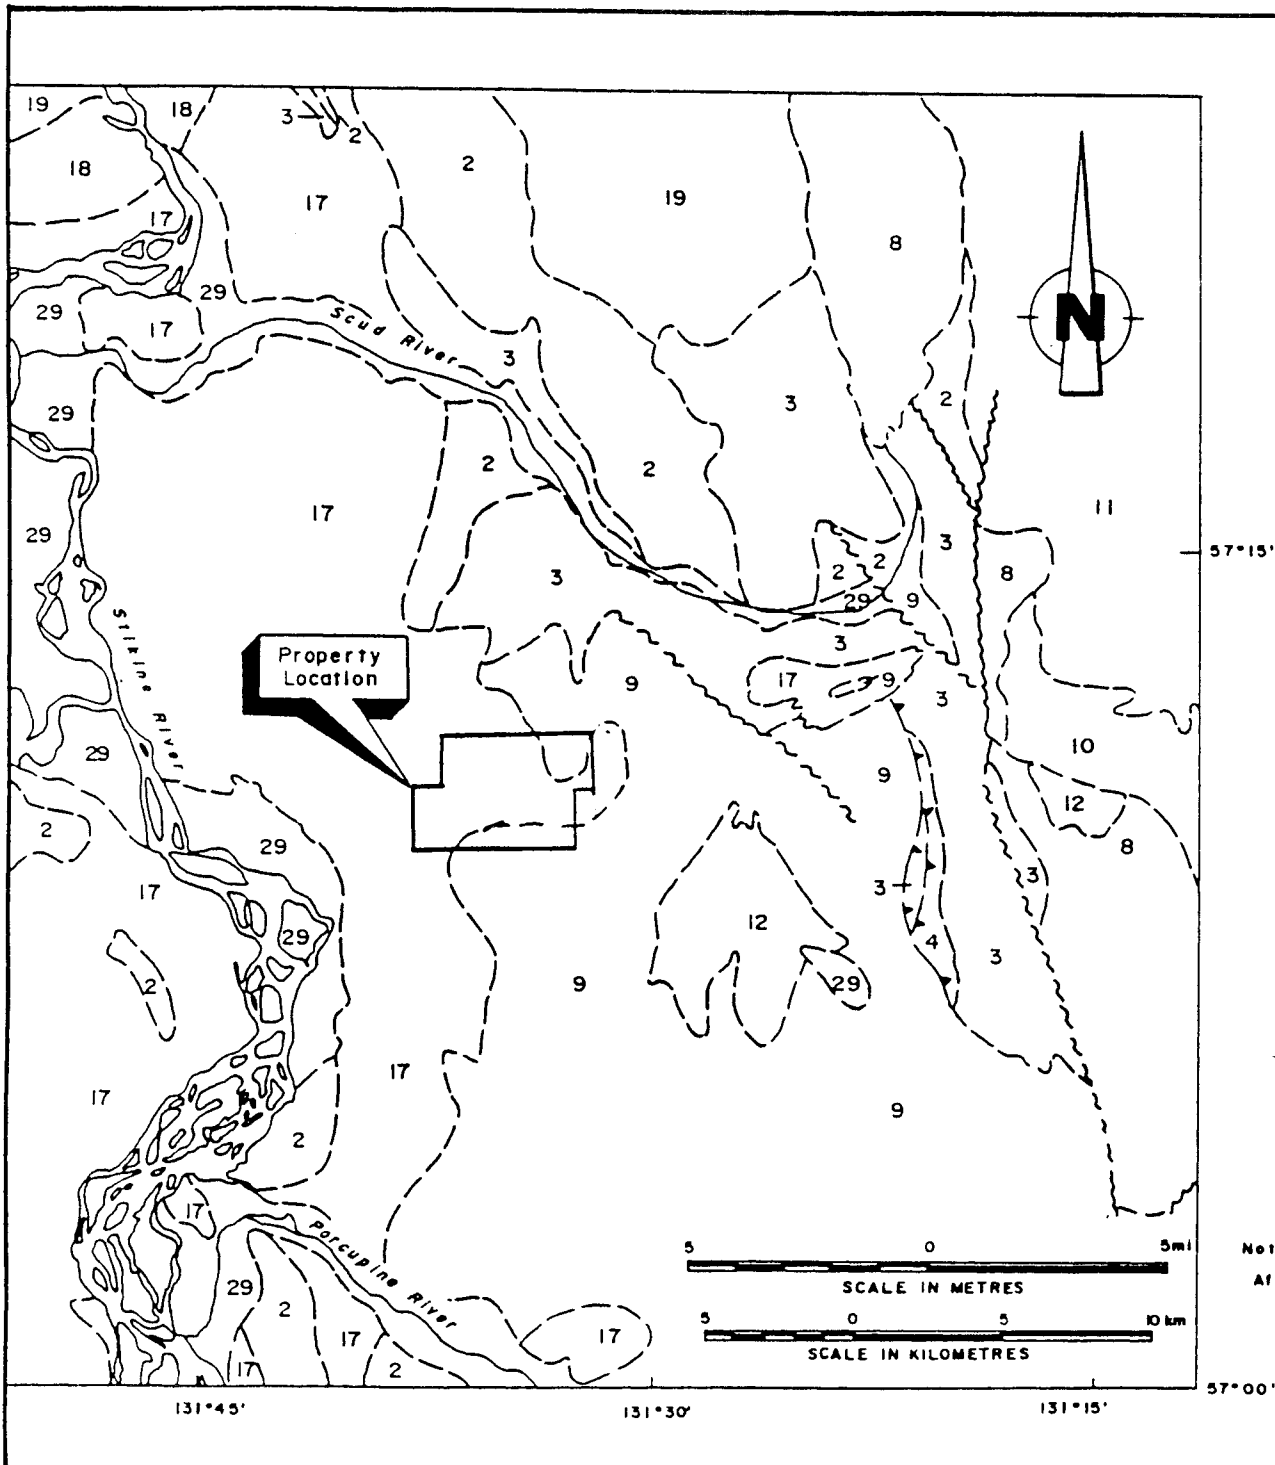

During the course of this program, 8 stream sediment samples, 125 soil samples and 179 rock samples were taken. Stream sediment samples were taken from the active parts of major drainages, screened underwater in the field to minus 40 mesh, then pulverised in the laboratory and analysed geochemically for gold and 32-element ICP (Figure 5).

Four contour soil lines were run in the North Fork Creek drainage with samples taken at twenty-five meter intervals. Wherever possible, soil samples were taken from the red-brown B horizon. Samples were sieved to minus 80 mesh in the laboratory and analysed geochemically for gold, silver, copper, molybdenum, lead, zinc, arsenic and antimony (Figure 6).

Reconnaissance geological mapping and prospecting were conducted over the entire property, using a topographic orthophoto at a scale of 1:10,000 (Figure 4). Rock samples were taken from zones of alteration and mineralization and analysed geochemically for gold and 32-element ICP (Figure 5). Those samples returning geochemical values in excess of 1500 parts per billion gold or 100 parts per million silver were fire assayed for gold, silver and any significant base metals. Rock descriptions are attached in Appendix C, and analytical certificates form Appendix D.

5.0 REGIONAL GEOLOGY

The Galore Creek area lies on the western margin of the Intermontane Belt within the Stikine Arch near its contact with the Coast Plutonic Complex (Figure 3). A sequence of Paleozoic to middle Triassic oceanic sediments is unconformably overlain by Upper Triassic Hazelton Group island arc volcanics and sediments.

ICY CLAIM GROUP			
REGIONAL GEOLOGY			
LIARD MINING DIVISION, B.C.			
EQUITY ENGINEERING LTD.			
DRAWN	M.T.S 104644E	DATE October, 1988	FIGURE 3

These have been intruded by Upper Triassic to Lower Jurassic syenitic stocks and by Jurassic to Lower Cretaceous quartz diorite and granodiorite plutons of the Coast Plutonic Complex.

The oldest rock assemblage in the Galore Creek area consists of Permian bioclastic limestone (Unit 3) overlying metamorphosed sediments and volcanics (Unit 2) and crinoidal limestone (Unit 1).

Unconformably overlying the Permian limestone unit are Upper Triassic Hazelton Group island arc volcanics and sediments (Units 5 through 8). In the Galore Creek area, Souther (1971) grouped these volcanic and sedimentary members in Unit 9, noting however that it was composed predominantly of augite andesite breccia, conglomerate and volcanic sandstone. The Paydirt gold deposit, located fifteen kilometers south of the ICY property, contains 185,000 tonnes of drill-indicated reserves grading 4.11 grams gold per tonne, hosted within silicified, sericitized and pyritized Upper Triassic andesitic tuffs (Holtby, 1985). This Upper Triassic volcanosedimentary package is also correlative with that which hosts the SNIP and Stonehouse gold deposits of the Iskut River district approximately 65 kilometers to the south.

Subvolcanic syenite and orthoclase porphyry stocks (Unit 12), dated as Late Triassic to Early Jurassic by Souther (1971), intrude all older stratified rocks. The Galore Creek copper-gold porphyry deposit, whose Central Zone hosts reserves of 125 million tonnes grading 1.06% copper and 400 ppb gold (Allen et. al., 1976), is hosted by Upper Triassic volcanics intruded by syenitic stocks. Orthoclase porphyry or syenite stocks are associated with most significant precious metals deposits in the Stewart, Sulphurets and Iskut River districts, including the Silbak Premier, Sulphurets, and SNIP deposits.

Jurassic and Cretaceous granodiorite to quartz diorite batholiths (Unit 17) of the Coast Plutonic Complex intrude all older lithologies. Souther (1971) incorrectly shows almost the entire Jack Wilson Creek drainage to be underlain by these batholiths (Figure 3).

6.0 PROPERTY GEOLOGY AND GEOCHEMISTRY

6.1 Geology

The oldest rock unit exposed on the ICY property (Figure 4) is a well-foliated chlorite-feldspar-quartz schist (Unit 2) with finely disseminated pyrite and magnetite, exposed in Creek #20 on the IC II claim. These schists are metamorphic equivalents of Permian and older argillites and greywackes. Cliffs of white, massive, locally crinoidal, Permian limestone (Unit 3) with cherty interbeds, occur upslope to the west. The limestone exhibits minor folds which plunge to the northeast and probably reflect larger scale folding.

Upper Triassic andesitic volcanics and sediments trend northerly across the rest of the ICY property, dipping steeply to the east. They appear stratigraphically younger to the west, with the easternmost units providing material for younger sediments. Black argillites, with interbeds of sandstone, conglomerate and volcanic tuffs (Units 5A-5C) cover most of the IC I, IC II, PS I and JW 3 claims. The argillites (Unit 5A) are black, very fine grained rocks which are locally graphitic, pyrrhotitic or pyritic. On the IC II claim, the argillites are cut by numerous barren quartz veins up to one meter wide, which generally strike north to northeast and dip steeply to the west. The sandstones, also included in Unit 5A, are generally dirty and in places may be more appropriately designated "greywackes" or "grits". However, in some areas, they are much cleaner and closer to

quartz arenite in composition. The conglomerates (Unit 5C) are definitely sedimentary in origin, with argillite, sandstone and lesser limestone clasts (averaging 10 to 30 centimeters across) in a coarse sandy matrix. In a few locations, this conglomerate is noticeably clast-supported rather than matrix-supported. Tuffaceous horizons (Unit 8C) within the sediments are quite felsic in composition and display well-developed fine laminations.

The interbedded sediments enclose an areally-restricted augite porphyry flow (Unit 8D) which extends to the south from the JW 3 claim. This rock contains augite phenocrysts up to one centimeter across in a green aphanitic matrix and displays a flow-top breccia texture with rounded fragments of augite porphyry exceeding thirty centimeters in diameter occurring within a matrix of itself. A volcanic conglomerate (Unit 8B) occurs on the southwestern part of the JW claim, overlying the augite porphyry flow. It contains an abundance of volcanic clasts, notably of augite porphyry, within a matrix composed largely of volcanic detritus.

A medium-grained andesitic rock (Unit 8A), exposed on the JW 1 claim in the headwaters of North Fork Creek, displays textures indicative of a microdioritic intrusive and appears to be subvolcanic. A dark green andesitic extrusive with interlocking two to four millimeter feldspar and pyroxene crystals within an aphanitic matrix has been traced on North Fork Creek 700 meters south of the JW 1 claim to the area of the old Kennco trench. Grant (1964) also noted that in places a dioritic intrusive grades "imperceptibly into aphanitic greenstones and appears to be a phase of the flows." Due to the difficulty in differentiating between the intrusive and extrusive phases of the andesite, both have been grouped in Unit 8A. Significant magnetite is present in Unit 8A at the north end of the North Fork canyon and disseminated copper mineralization occurs

throughout the canyon.

The youngest rocks on the property are a number of medium to fine-grained lamprophyric dykes (Unit L) which consist dominantly of biotite, augite and K-feldspar laths. These dykes reach up to about 3 metres in width and are responsible for the occurrence of small waterfalls in the North Fork Creek canyon.

A number of north to northeasterly trending shear structures on the ICY claim group have produced well defined creek gullies with associated gossans, especially in the headwaters of North Fork Creek. Well developed slickensides were observed in float within many of these structures. Some of the shears trend more easterly and may represent conjugate shears to the main northerly trending system. These cross shears are concentrated on the east side of the North Fork canyon and may reflect a change of lithology to the west.

6.2 Geochemistry

Eight screened silt samples were taken from major drainages on the ICY property during the 1988 exploration program (Figure 5). Of these, six must be considered anomalous with greater than 200 parts per billion gold. All five of the samples which test the headwaters of North Fork Creek returned anomalous gold values. The highest, with 3440 parts per billion gold, was taken from Creek #14, near where gold mineralization in the Fourteen Vein was subsequently found. Creek #20, draining the IC II claim, returned a sample with 500 parts per billion gold, confirming the regional geochemical survey, whose gold and copper results placed Creek #20 in the top one percent of all streams sampled in the Telegraph Creek mapsheet (GSC Open File 1646, 1988). Lead, zinc and arsenic values were uniformly low but copper values were generally high, especially on Creeks #14, 15 and 16, each of which returned values greater than 500 parts per

million copper.

A statistical analysis of soil geochemical results from 125 samples on the ICY property and 338 samples from the property immediately to the south suggests that values greater than 160 ppb gold and 330 ppm copper are probably anomalous and require further investigation.

The lowest of the three soil contour lines, located from one hundred to two hundred meters east of the North Fork Creek canyon, returned eleven gold values greater than 100 ppb and copper values up to 1000 ppm (Figura 6). These form part of a strong copper-gold soil geochemical anomaly which extends 800 meters south of the JW 1 claim, and which may indicate the presence of mineralization similar to that discovered in the North Fork Creek canyon. The middle contour line, ranging from 850 to 950 meters in elevation, yielded spotty high gold and copper values up to 490 parts per billion gold and 300 parts per million copper. The upper contour line, which wraps around Creeks #15 and 16 and the eastern drainages of North Fork Creek, was characterized by slightly higher background gold and copper values than the middle line, with values up to 285 parts per billion gold and 6290 parts per million copper. Lead, zinc, arsenic, antimony, molybdenum and silver results are generally low for all soil samples, with erratic high values up to 32 ppm lead, 156 ppm zinc, 180 ppm arsenic, 3.0 ppm antimony, 55 ppm molybdenum and 2.2 ppm silver.

7.0 MINERALIZATION

The headwaters of North Fork Creek consist of three highly gossanous creek gullies which follow north to northeasterly trending shear zones. In Creek #14, up to 15% finely disseminated pyrite occurs in very fine-grained tuffaceous

horizons which appear to provide a favorable host for mineralization, due to their tendency to fracture more intensely than the interbedded sediments. Sample #245526, a chip across 2.0 meters from one of these pyritic tuffaceous horizons in Creek #14, assayed 0.054 ounces/ton (1.85 grams per tonne) gold, and grab sample #245767, taken over five meters from another one, assayed 0.248 ounces/ton (8.50 grams per tonne) gold. Interestingly, massive pyrite within a shear zone in Creek #14 contained only 310 parts per billion gold in sample #245675.

Similar altered and mineralized zones in creeks #15 and #16 have not been sampled to the same extent as Creek #14. Sample #245772, a grab from a five centimeter quartz-pyrite vein between Creeks #15 and #16, contained 0.052 ounce/ton (1.78 grams per tonne) gold. Grab sample 245514, of a 20 centimeter pyrite-magnetite vein in Creek #16, contained 1300 parts per billion gold.

Several scattered boulders of sulphide-rich float, collectively referred to as the Float Zone, were sampled near the 1250 meter contour in the drainage of Creek #16, with results summarized in Table 7.1. One hundred meters further upstream, several en echelon quartz-chalcopyrite veins outcropping over a width of two to three meters assayed 5.67% copper and 6.04 ounces/ton (207 grams per tonne) silver in sample #245534, with no significant gold, lead or zinc.

TABLE 7.1

ASSAYS FROM FLOAT ZONE BOULDERS

Sample	Type	Gold		Silver		Copper	Lead	Zinc
		oz/ton	g/t	oz/ton	g/t	%	%	%
245535	Float	0.423	14.20	0.49	16.8	-	0.23	0.13
245536	Float	0.432	14.80	1.35	46.3	3.28	-	-
245538	Float	0.887	30.40	2.72	93.2	5.10	-	-
245540	Subcrop?	0.074	2.54	0.21	7.2	1.14	-	-

Two meters of a chloritic shear zone in the unnamed stream south of Creek #16, containing abundant magnetite with lesser pyrite and chalcopyrite, assayed 0.110 ounce/ton (3.77 grams per tonne) gold with 0.63% copper in sample #245517. Fifty meters further up the same stream, sample #245515, taken from a float boulder of altered volcanics containing 30% pyrite and minor magnetite, assayed 0.062 ounce/ton (2.12 grams per tonne) gold.

Four hundred meters further south, in the next creek drainage, the Cliff Vein, a quartz-pyrite-chlorite-magnetite vein, outcrops in a steep side gully. Where it can be sampled (#245751), the vein is 30 to 50 centimeters wide, strikes $105^{\circ}/70^{\circ}\text{S}$, and grades 0.420 ounce/ton (14.4 grams per tonne) gold. Further up the face it appears to swell to about one meter in width. Talus of semi-massive sulphide mineralization from this vein, collected at the base of the cliff, assayed 0.306 ounce/ton (10.5 grams per tonne) gold with 0.23% copper in sample #245759. In the next drainage to the south, a 50 to 80 centimeter quartz-pyrite-magnetite-chalcopyrite vein assayed 0.054 ounce/ton (1.85 grams per tonne) gold with 0.23% copper in sample #245716.

In the North Fork Creek canyon itself, chloritic volcanics with disseminated pyrite, chalcopyrite and gold contents which range up to 0.130 ounce/ton (4.46 grams per tonne) in sample #245757, host significant vein mineralization. The Fourteen Vein, a quartz-sulphide vein with pods of coarse pyrite, magnetite and chalcopyrite in chlorite-ribboned quartz, is exposed at the junction of Creek #14 with North Fork Creek. It trends $110^{\circ}/35^{\circ}\text{S}$, pinching and swelling from forty centimeters to two meters in width. Table 7.2 summarizes assays taken from the Fourteen Vein. Sample #245753, from a seven meter width of chloritic, magnetitic and pyritic wallrock adjacent to this vein contains 830 parts per billion gold.

TABLE 7.2
ASSAYS FROM THE FOURTEEN VEIN

Sample Number	Type	Width m	Gold		Silver		Copper %
			oz/ton	g/t	oz/ton	g/t	
245754	Grab	1.5	0.390	13.37	0.32	11.0	-
245755	High-grade	-	4.380	150.10	2.97	101.8	0.34
245583	Chip	1.9	0.076	2.60	0.08	2.7	-

Several intensely silicified shear zones within microdiorite are exposed along the west wall of the North Fork Creek canyon, near the southern boundary of the JW 1 claim. Grab sample #245704, taken across one meter of one of these silicified shears (termed the Boundary Zone), assayed 1.250 ounces/ton (42.84 grams per tonne) gold and 0.24% copper. Chip sample #245585, taken across 3.4 meters of the same shear, assayed 0.329 ounce/ton (11.27 grams per tonne) gold with 0.11% copper. In the same general area, grab sample #358198, taken from across five meters of silicified and sericitized volcanics with disseminated pyrite, assayed 0.054 ounce/ton (1.85 grams per tonne) gold.

8.0 DISCUSSION

Stream sediment sampling proved effective in signalling the presence of gold mineralization along each of the headwater tributaries of the North Fork of Jack Wilson Creek. To date, however, no adequate source has been found to explain the anomalous gold values returned from Creek #20, which drains the IC II claim.

The soil geochemical results, with values up to 490 parts per billion gold and 6290 parts per million copper, will prove useful in directing future prospecting and sampling on the ICY property. To date, no soil samples have been taken from the

Creek #20 drainage or from the western side of North Fork Creek, both of which have been shown to be anomalous by stream sediment sampling.

Significant gold mineralization has been discovered in all the drainages which form the headwaters of North Fork Creek, presenting two distinct exploration targets: copper-gold porphyry and quartz-sulphide vein deposits. Porphyry copper-gold mineralization, possibly hosting higher-grade veins, may explain a large copper-gold soil geochemical anomaly centered on North Fork Creek a few hundred meters south of the JW 1 claim and extending northward onto the ICY property. There is little rock exposure within that soil geochemical anomaly, but one trenched creek exposure was reported to grade 0.76% copper over a sample length of 13.1 meters (BCDM Annual Report, 1965). A 50 centimeter sample within that trench assayed 1.64% copper with 0.058 ounce/ton (1.99 grams per tonne) gold. On the JW 1 claim, gold values occur in several zones of alteration and pyritization without associated veining, including one grab sample over five meters in Creek #14 which assayed 0.248 ounce/ton (8.50 grams per tonne) gold. The extent and significance of these gold-bearing alteration zones and their potential for large-tonnage porphyry-style deposits is not yet clear.

Narrow gold-rich quartz-chlorite-pyrite-magnetite-chalcopryite veins with widths up to two meters and grades in excess of ten grams gold per tonne have been discovered in several locations throughout the headwaters of North Fork Creek. Four zones, in particular, show great promise. The Fourteen Vein, located at the junction of Creek #14 with North Fork Creek, yielded grab samples grading up to 4.380 ounces/ton (150.2 grams per tonne) gold. The Boundary Zone, a silicified shear zone located 500 meters downstream, assayed 0.329 ounce/ton (11.27 grams per tonne) gold in a chip sample across 3.4 meters. The Float Zone consists of several gold-rich sulphide boulders not

yet located in place. The Cliff Vein, a thirty centimeter to one meter wide vein, assayed up to 0.420 ounce/ton (14.4 grams per tonne) gold. The strike and depth potential of these veins has not yet been tested.

To date, prospecting, mapping and sampling have been concentrated on the JW 1 claim, and all significant mineralization has been discovered there. The potential of the other claims remains almost untested.

9.0 RECOMMENDATIONS

9.1 Program

An exploration program consisting of soil geochemistry, prospecting, geological mapping and hand-trenching is recommended for the ICY property. This program will continue the property-wide exploration begun in 1988 and allow for better definition of the mineralized structures discovered during that program.

Soil geochemical contour lines should test drainages shown to be anomalous by the 1988 stream sediment sampling program. Three soil contour lines at 1100, 1200 and 1300 meters elevation should wrap around the highly anomalous Creek #20 drainage on the IC II claim. Another three soil lines should be run along the 700, 800 and 900 meter contours from Creek #14 south along the west side of North Fork Creek, then curving northwesterly along the east side of Creek #11. This will help locate the extensions of mineralization discovered during 1988 in North Fork Creek and Creek #14, and delineate further the large copper-gold soil geochemical anomaly centered south of the ICY property on North Fork Creek.

Prospecting and geological mapping at a scale of 1:5,000, using orthophoto topographic maps for control, should be carried

out over the entire property. Geological mapping should provide a more detailed lithological and stratigraphical knowledge of the property, and should be directed towards a better understanding of the nature, genesis and significance of the various types of alteration and mineralization present. Priority prospecting targets are the stream sediment geochemical anomaly in Creek #20 and the Float Zone boulders. All soil geochemical anomalies should be investigated and further prospecting should be directed at extending the strike length of mineralization discovered during the 1988 exploration program. Systematic chip sampling of pyritic tuffaceous horizons, quartz-sulphide veins and altered wallrock throughout the North Fork Creek canyon and its tributaries is essential. Hand-trenching will be necessary in places to determine the nature and orientation of mineralization, to extend it along strike under overburden and to obtain unweathered material for chip sampling.

APPENDIX E

ENGINEER'S CERTIFICATE

ENGINEER'S CERTIFICATE

I, HENRY J. AWMACK, of 308-1510 Nelson Street, Vancouver, in the Province of British Columbia, DO HEREBY CERTIFY:

1. THAT I am a Consulting Geological Engineer with offices at Suite 406, 675 West Hastings Street, Vancouver, British Columbia.
2. THAT I am a graduate of the University of British Columbia with an honors degree in Geological Engineering.
3. THAT I am a member in good standing of the Association of Professional Engineers of British Columbia.
4. THAT this report is based on fieldwork conducted by Equity Engineering Ltd. on the ICY claim group during August and September 1988, government publications and reports filed with the Government of British Columbia.
5. THAT I directly own 10,000 shares of Bellex Mining Corp. and 10,000 shares of Sarabat Gold Corporation. I indirectly own a further 12,500 shares of Bellex Mining Corp. and a one-eighth interest in the JW 1 and JW 3 claims through Antioch Investments Ltd.

DATED at Vancouver, British Columbia, this 22 day of November, 1988.

Henry J. Awmack, P. Eng.

APPENDIX F

STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, BRIAN K. YAMAMURA, of Apt. 2, 123 King Street East, Kingston, in the Province of Ontario, DO HEREBY CERTIFY:

1. THAT I am a Geologist in the employment of Equity Engineering Ltd. with offices at Suite 406, 675 West Hastings Street, Vancouver, British Columbia.
2. THAT I am a graduate of the University of British Columbia with a Bachelor of Science degree in Geology.
3. THAT my primary employment since 1984 has been in the field of mineral exploration. My experience has encompassed a wide range of geological environments and has allowed considerable familiarization with geophysical and geochemical techniques.
4. THAT this report is based on fieldwork supervised by myself during the months of July through September 1988, government publications and reports filed with the Government of British Columbia.
5. THAT I have no interest in the property described herein, nor in securities of any company associated with the property, nor do I expect to acquire any such interest.

DATED at Vancouver, British Columbia, this 22 day of November, 1988.

B. Yamamura

Brian K. Yamamura, Geologist

Dear Sirs

At your request, I have reviewed the report entitled "1988 Summary Report on the JW 1, JW 3, IC I, IC II and PS I claims" by Henry J. Awmack and Brian K. Yamamura. In addition to reviewing the report and discussing its contents with the authors, I have visited the claims in September 1988 with Brian Yamamura and examined the field work in progress.

In addition, I have previous background on the property having carried out copper exploration programs over the same ground at various times during the years from 1960 to 1965 while in the employ of Kennco Exploration (Western) Ltd.

The claims lie on the periphery of the Galore Creek porphyry copper complex on its western side. Although significant gold mineralization had previously been located on other properties on the south and east margins of the Galore complex (Teck Corp and Continental Gold), this 1988 program represents the first serious gold exploration work on the Sarabat claims.

The 1988 program has been preliminary in nature but has identified a number of areas of vein or shear-controlled mineralization carrying good gold values. Values in grab samples range up to 150.2 gms/tn (4.38 oz/t) gold from vein material in situ.

Of probable greater economic importance are the indications of bulk mineralization in silicified sections (up to 11.27 gm/tn across 3.4 meters) and in porphyry-style copper-gold zones.

In addition to the mineralization identified in place, the stream sediment and soil geochemical results suggest that by no means all of the areas of interest have been located.

The work has been well carried out and the results are most encouraging.

I fully concur with the conclusions reached by Awmack and Yamamura and with their recommended work program. In view of the positive results to date, the program is clearly warranted and has an excellent chance of further success.

The cost estimates for the program similarly appear reasonable and adequate to carry out the work.

Respectfully submitted

Gerald H. Rayner, P. Eng.

CERTIFICATE

I, Gerald H. Rayner, do hereby certify that:

1. I am a consulting geological engineer with offices at 626 Duchess Avenue, West Vancouver, B.C.
2. I am a graduate of the University of British Columbia (B.Sc. Geology).
3. I am a member in good standing of the Association of Professional Engineers of the Province of British Columbia.
4. I have practised my profession since 1958 primarily in Western North America and the South Pacific.
5. This letter report is based on a review of the 1988 summary report on the JW 1, JW 3, IC I, IC II and PS I claims by Awmack and Yamamura; on a visit to the site while the subject program was being carried out; on discussions with the authors and on my previous experience in carrying out programs on the same property at various times during the years 1960 to 1965.
6. I have no interest in the shares or properties of Sarabat Gold Corporation nor do I expect to receive any.

Dated at West Vancouver, B.C. this 14th day of December, 1988.

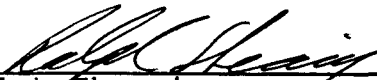

CERTIFICATES
