Dave:

Herewith an
excerpt from Peter Fox's
report on Gambier Island
(20th Century).

Peters overall estimate
is 250×10^6 tons of 0.27%
Cu & 0.014% MnS_2

That grade doesn't
make a mine but there
is a core of 40×10^6 tons
of 0.32% Cu & 0.015% MnS_2
which still doesn't make
a mine in my view
