

**LEGEND**

- FELDSPAR PORPHYRY** - Massive, dark greyish purple. Unmineralized, weakly silicified at contact with underlying rocks.
- Intensely Silicified and Sericitized Zone.** Pale yellow-grey to yellowish-white, well fractured; weakly mineralized with pyrite and arsenopyrite.
- Intensely Silicified and Sericitized Zone.** Pale pinkish grey to grey white, well fractured; pervasive quartz veining. Locally abundant sulphides, predominantly Pyrite, Arsenopyrite; minor Chalcopyrite, Galena.
- Massive Arsenopyrite/Pyrite, locally abundant Chalcopyrite, Sphalerite, Galena, often banded.
- Massive mineralization as above, exhibiting breccia textures.
- Massive Quartz vein(s) often anastomosing or lenticular pods, less commonly sheeted.
- Abundant to semi-massive pyrite, chalcopyrite, arsenopyrite, tr. galena, sphalerite.
- Massive Quartz vein(s) as above exhibiting breccia textures.
