Dire.

This property has the
earmarks of a disseminated
type - arsenic - antimony -
gold deposit. The host
rocks are argillites cut by
Eocene rhyolites and
Cretaceous(?) gbg-bio-felspar
dykes.

To earn in, we would
have to spend 150,000 in 1988.
Nearest road is ^{ten} air miles
away. Percussion drill
could be flown in with flight
500D - maybe!

Note: Recommended.

Dear Len:

Thank you very much for the opportunity to study the maps and reports on your Taseko Lake properties.

I had indicated earlier my interest in the Brass Tags claims but it has been suggested that I refrain from any commitments until such time that I have examined the property.

I appreciate that such a delay may be totally unsatisfactory to you but thought you should know where matters stand at the present time.

I very much appreciate your cooperation and that of Pat McAndless and Wayne Livingstone.

Yours sincerely,

W. M. Sirola
Regional Exploration Manager

Attention: Mr. W. M. Sirola

Dear Sirs:

Thank you for your interest in several of our projects. I must apologize for the delay in getting this information to you but I trust that your interest has not diminished. Enclosed are summary reports on the Taseko and Ecstall Projects. The feasibility report on Bralorne is in its final stages of completion and will be available shortly.

The Lord River project was briefly discussed with you. An opportunity for a new partner exists, that is if you wish to pursue the matter further.

I would appreciate confirmation of your interest on the above as soon as possible.

Yours very truly,

E & B EXPLORATIONS INC.
