

CORPORATION FALCONBRIDGE COPPER

MEMORANDUM

DATE: April 4, 1983
TO: A. J. Davidson
COPIES TO: D. H. Watkins
DE FROM: I. D. Pirie
SUJET SUBJECT: Tan Claims

826813 924/4

Geochem results for the samples taken during our visit to the Tan property have now been received and are attached. They confirm a distinctly bimodal rock composition in the area visited with rhyolite hosting the sulphide mineralization (T6, 9) being overlain by basaltic andesitic (T7, 8). Unfortunately, the results also confirm the essentially barren nature of the sulphides. The only significant value is a 0.84% Zn (8400 ppm) in the sample taken from slide material on the road northwest of Fumarole Creek.

There is little doubt that the property has significant potential for volcanogenic massive sulphides. Although we should endeavour to see the 'Main Showing' (higher elevation) before committing ourselves it is not on the present claims and therefore should not influence a deal with Gordon Stapley.

I recommend that we start negotiations for the claims. Should a suitable arrangement be possible, and should our other interests in the Chilliwack Group proceed to fruition, it would provide us with a strong position in a little explored belt with excellent success potential.

Ian D. Pirie

TAN CLAIMS

L-1	Cu, Zn, Au, Ag	(Lizard) UMEX
L-2	Cu, Zn, Au, Ag	(Lizard) UMEX
T-1	Cu, (Pb), Zn, Ag, Au	(mass. sulph. drill set up, upper road)
T-2	Cu, (Pb), Zn, Ag, Au	(sulphides - #1 showing)
T-3	Cu, (Pb), Zn, Ag, Au	(sulphides - #1 showing)
T-4	Cu, (Pb), Zn, Ag, Au	(sulphides - #1 showing) NHS.
T-5	Cu, (Pb), Zn, Ag, Au	(slide area float
T-6	W. R.	Cherty rhyolite - upper road.
T-7	W. R.	Vesicular andesite - dacite. SE & Above #1 showing.
T-8	W. R.	Dacite - rhyodac. Above #1 showing.
T-9	W. R.	Silicified? - Above #1 showing.
