92I (ECJ)

The price of Peel Resources shares has doubled since Tom sampled the Sheba Group in the Highland Valley. Be that as it may, no assays have been published from either of the two drill holes and we have no reason whatsoever to change our opinion of this situation.

To..... P. M. KAVANAGH From..... WILLIAM M. SIROLA

Subject..... SHEBA COPPER PROPERTY OF PEEL RESOURCES LTD. Date..... December 22nd, 1961.
HIGHLAND VALLEY: 92-I

Herewith Tom Williamson's sketch of the trenches which he sampled on the above property.

The best assay was obtained in Cut No. 1 and amounted to 12' of 1.11% copper. There was some obvious chalcocite in this sample. At the moment I do not see anything in this occurrence which would justify any further work on our part. I say this because wall rocks adjacent to the mineralization are the usual unaltered granodiorites of the Guichon-Batholith and I doubt very much that this type of occurrence will amount to anything minable.

We understand that the first diamond drill hole which is located between Cuts No. 1 and 2 is now complete and did encounter 30' of mineralization. We do not know the true width or the grade, but will continue to watch the situation.
