Attention: J. Hirst, President

Dear Jim;

I have recently had the opportunity, through Mr. G. Crowe, of reviewing your Ruby-Pansy property on southern Vancouver Island.

I am very encouraged by the presence on the Pansy claim of gold values of economic grade. I am also encouraged to note that the geophysical expression of the Pansy vein has been successfully traced onto your property by VLF and that anomalous gold values also occur along this trend. The property certainly warrants further exploration.

I would recommend a program of trenching, and further VLF and/or IP to trace both the Ruby and Pansy veins and to explore the silicified zone in the northern portion of the property.

We would very much like to review the results of any new work carried out on the property.

We would also be pleased to review any other properties your group may have.

Yours truly,

per A. J. Davidson
