North Fork 3

feet

- 204-212 Foliated, chl_c, minor cp-py(-po).
212-215 Massive po(-cp).
215-219 Badly broken & foliated.
219-235 Spotted, sheared but not broken up.

North Fork 4

Feet

- 390 Med. green, fairly, homog. little epidote. Not strongly foliated.
390-413 Well foliated chloritic zone with stringery sulphides. Po-py-cp. Locally almost semi-massive 1/2" (412'). Ground zone at 409' may have had more sulphides. Average 3-4% over section.
413-455 Typical of down hole from sulphides. Locally fractured, epidotic. Locally distinctly dioritic.
