Dear Gary

Enclosed are complementary set of 1:50000 maps from the Sicker project - 'they've finally seen the light of day!' The papers should follow next year. Also enclosed is a set of whole rock analyses that were done by our lab on samples that I collected from Abernethy drill holes back in 1987, the data is not published yet but will form part of the data set accompanying the Duncan paper. However, you might find it useful now (or not as the case might be). ~~The~~ The samples were collected for petrological purposes rather than exploration lithochemistry. If it's useful and you'd like a digital version, I could supply it in dBase III+, Excel, ASCII or Lotus format. Thanks for all the help during the project.

Yours  
Nick Massey
