RE: SCHEDULE 'A'- DEPOSIT AREA - SABLE RESOURCES AGREEMENT

The attached diagram shows a proposed deposit area based on the existing property survey grid.

Note that the currently defined deposit is in the northeast part of the Chappelle 3 mineral claim which makes up part of the Mining Lease. Designating this claim as the deposit area would not leave adequate room for a possible northeast extension of B Zone and part of A Vein also extends onto this claim.

Instead, I would propose that the deposit area be defined as lying between 2000 and 2500 North and between 12150 East and the east boundary of the Mining Lease which is essentially coincident with 12500 East.

This area is easily identified on the ground. The west boundary is immediately west of the north-south creek; the north boundary extends just beyond a prominent pass; the east boundary corresponds to the Mining Lease and the south boundary is about 200 metres south of the southwestern limits of B Zone.

There is enough room in this area to cover a possible northeast extension and to provide for a dump area. This proposed area excludes some interesting veins in the east-west draws to the south and a possible northeast extension of A Vein.

N.C. Carter
