PRESS RELEASE

Multinational Resources Inc. has completed the Phase I drilling program on its Toodoggone area property.

Sixteen holes aggregating 5,036 ft. were drilled to test the B Zone along strike to the northeast and southwest.

The most significant intercepts are tabulated below:

<u>Drill hole</u>	<u>Core Length (ft)</u>	<u>Oz Au/t</u>	<u>Oz Ag/t</u>
M87-8	13.5	0.215	0.47
M87-9	14.5	1.342	2.26
M87-12	12	.362	0.30
M87-16	14	.341	3.39

The recently completed program indicates that the plunge of the high grade B Zone ore shoot steepens at depth. The Phase II drill program, consisting of approximately 6,000 feet scheduled to start in one week, will further test the B Zone mineralization at depth as well as along strike to the northeast.
