Dear George:

We analyzed two of your samples previously reported as IS (our 26-1001) on the heavy mineral fraction. We can now report the following:

Sample	Wt. of S.G. >2.96	U ppm
GL-76-46 - 8 HM	.0078 gm	2
36 HM	.0034	2

Though the weight of the sample makes for a less confident analysis, the presence of U minerals as discreet particles should have been discovered via this analysis.

The other two IS samples on this report had absolutely nothing in the heavy fraction.

Cordially,

BONDAR-CLEGG & COMPANY LTD.
