

TRAV. UPHILL E OF CAMP

841636 13 Oct. 78
Harrison

Start. Road @ S 78-168 Head 28° to "C.P.", 250' to N. (which is S-78-166)

- ① friable Al (b)
10b/30l/60t
rnd & ang, A-D frags
 - ② Am
 - ③ Dlg locally, incip abund
- bdg. 140/15 NE
mix. remin. of old IAM "seds"
Al " of upper Hem. road
opp. old IAM 50

"megabx" mix

shmg?? 135/70 SW
A Dlg (alm Ab)
lge clast's
irreg Ap

DAlg increases upwards
but never quite fully developed

middle of 3 knobs on photo NE of major "double" gulch.

start high rd. xng double gulch @ double jet.
D's ab. Dlg resis (looks like porphyte flow) & Dp
Head Sthly on rd 600' from jet.
Then 50° SW, start op.

- 17p sm. 10x10 Dlg
- 74p 20x20 " (true) alm. spherul. in pts
- 131p " Dlg res. (now 50' to R of sm-mod gully)
- 150 End of lge o/c extending to W, 50' + wide, Dlg true. app. "bdg" 184/30 E
- 167 In aforesaid gully, now broad, runs 60°
- 221 sub o/c pg Dlg true
- 274 Now level w/ "c.p." on p. 1 & 100's of maj. "double" gut.
- 278 o/c 20x10 Dlg true, 11" ck
- 314 o/c to L. 20x30 Dlg res. over Dp dy
NS cols 188/20 S

; Now ~ 25' below "c.p."

- 324 Dlg true to L. end of 40' x + 80' / 130° o/c
- 334 on R 10x10 Dlg - (Amyg).
- 348 on R 10x20 & touching gully A ~~pp~~ - Algres?
- 351 in ck bottom
o/c follows ck down to 362, is A?, Amyg locally, then arg. bk., m

no really clear faulting in ck.
Now follow ck.

- 373 R wall start Dlg
- 377 345/8E & 5' o/c AT (S) in L wall
- 383 L start Dlg now hemap on R

20x20 Dlg head 86° start op (to W)
27p 345 SE & road.

S 78 109 area Dlg rubble
L + 100's, streaky Dlg o/c

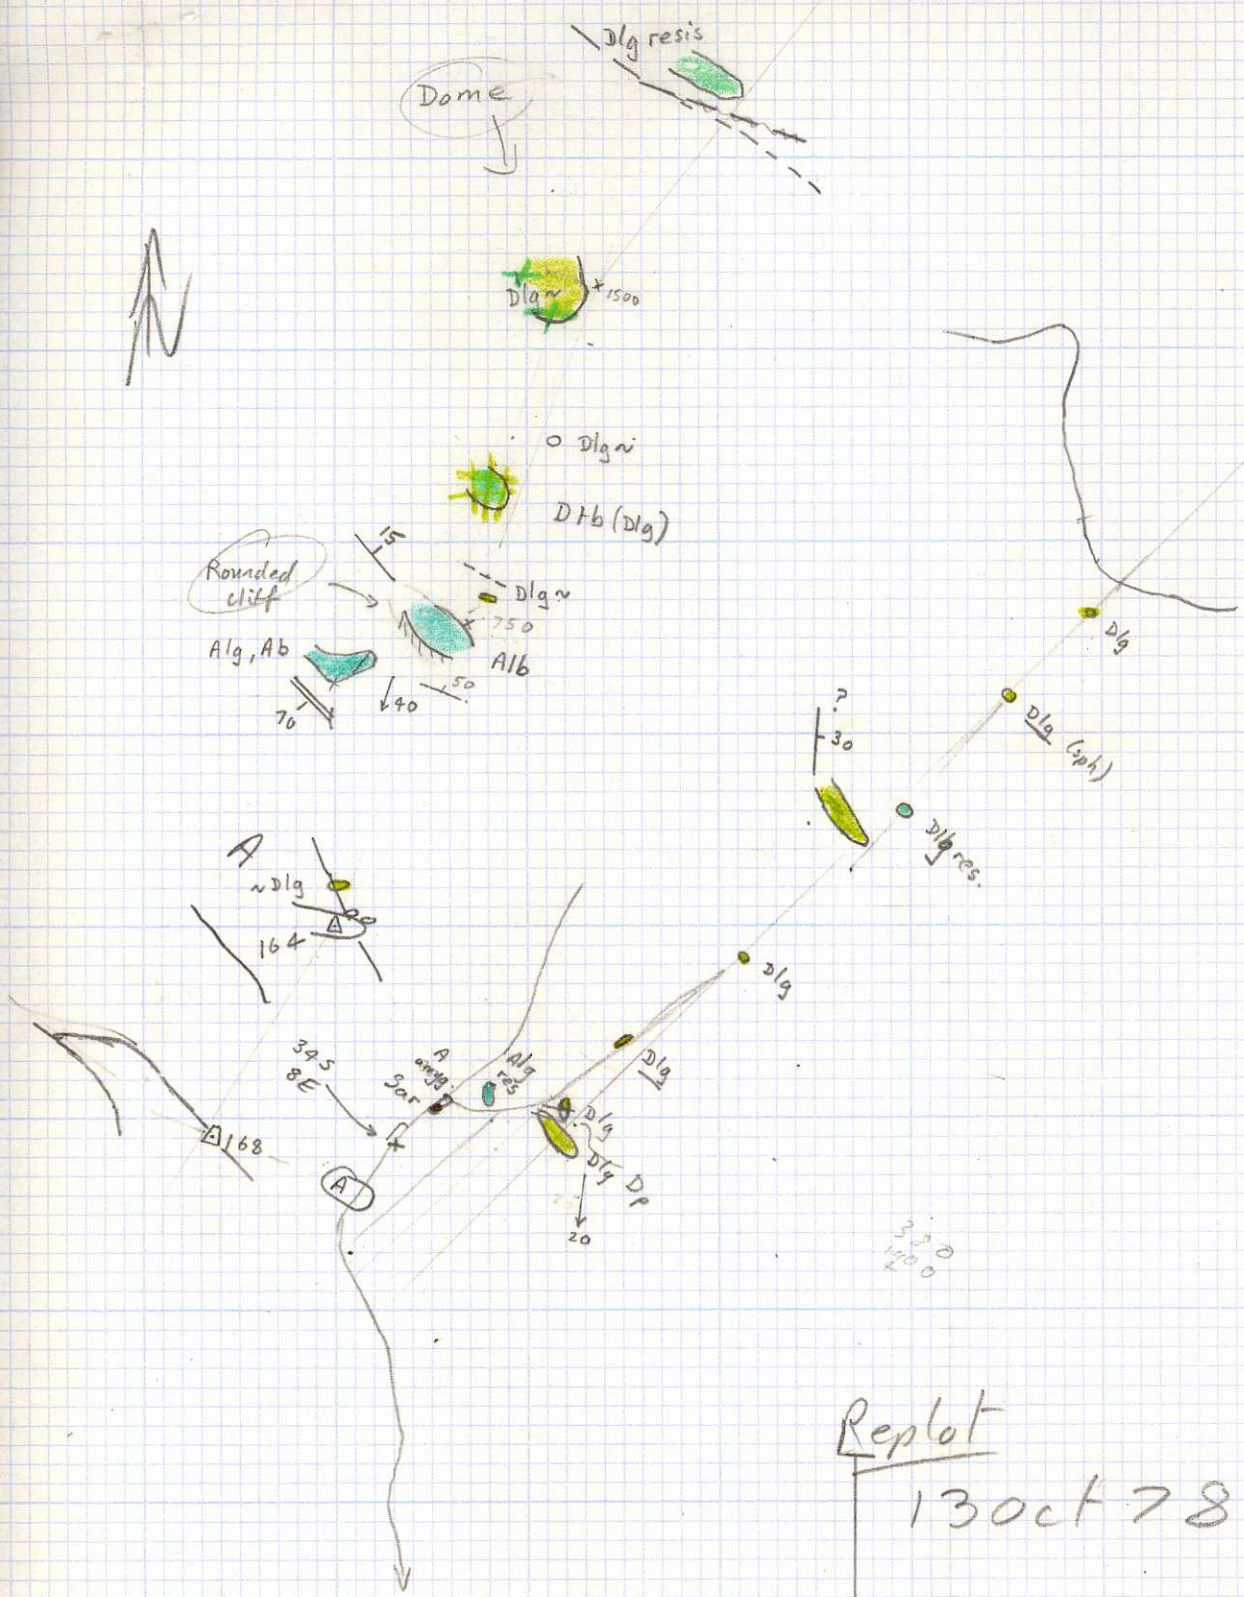

POWER LINE o/c

is AT-IT w extra sec 10% RDph mdd
bx frags to 6"

* BAREN Rb above N grid - SILICIFIED?

Use gchm
partly to est.
