

KITGORO INLET, Q.C.I

8 June 78

(No claims)

Location: 3 mi ESE of Buckhorn property, on same (general) geological trend.

Geology: Karmutsen, with some Kunga.

Samples 307 to 309 are in Karmutsen  
301 to 304, mainly Kunga  
208 to 210, Karmutsen float

Alteration: The Karmutsen float is silicified and bleached, with some quartz veining, but is not geochemically high.

Geochem: Au is slightly to moderately anomalous over an area of about 1 square mile. As is more locally anomalous.
