PROSPECTOR CLAIM - Q.C.T.

(Designated 4 unit claim)

NOTES

Locⁿ: Marie L., Graham Island.

Mineralize: Quartz float E. of Marie Lake is moderately to strongly anomalous in Au. Two colinear altered zones W. of the lake have significant Au assays (see map.)

Geology: Haida shales, low in the hillside N. of the access road, are unconformably overlain by Masset volcanics. The same unconformity is present at ^{or a little W. of,} the Specogna deposit.

Alteration: NS silicified zone 7 to 20' wide.

Other: E of Marie L., on Gold creek, is the reported position of Eno's Gold mine. No other info. available.

Access is excellent.

MANY YEARS CLAIM - Q.C.I.

(Designated 4 unit claim)

NOTES

Locn: Just W. of Shiela Lake, Graham I.

Geochem: 1½ mile string of samples moderately anomalous in Au and As, occasionally in Hg. Peak value of 110 ppb represents pyritic rock in a silicified Kunga sediment.

Geology: Host rocks mainly "brecciated"? volcanics, but also mixed volcanics and Kunga limestone. Volcanics are probably Massett

Alteration: Pyritization is fairly abundant, but seems to be very deeply leached towards the top of the hill sampled. In W.H.'s words this area could be a "sleeper". Also strong silicification and weak quartz veining is present

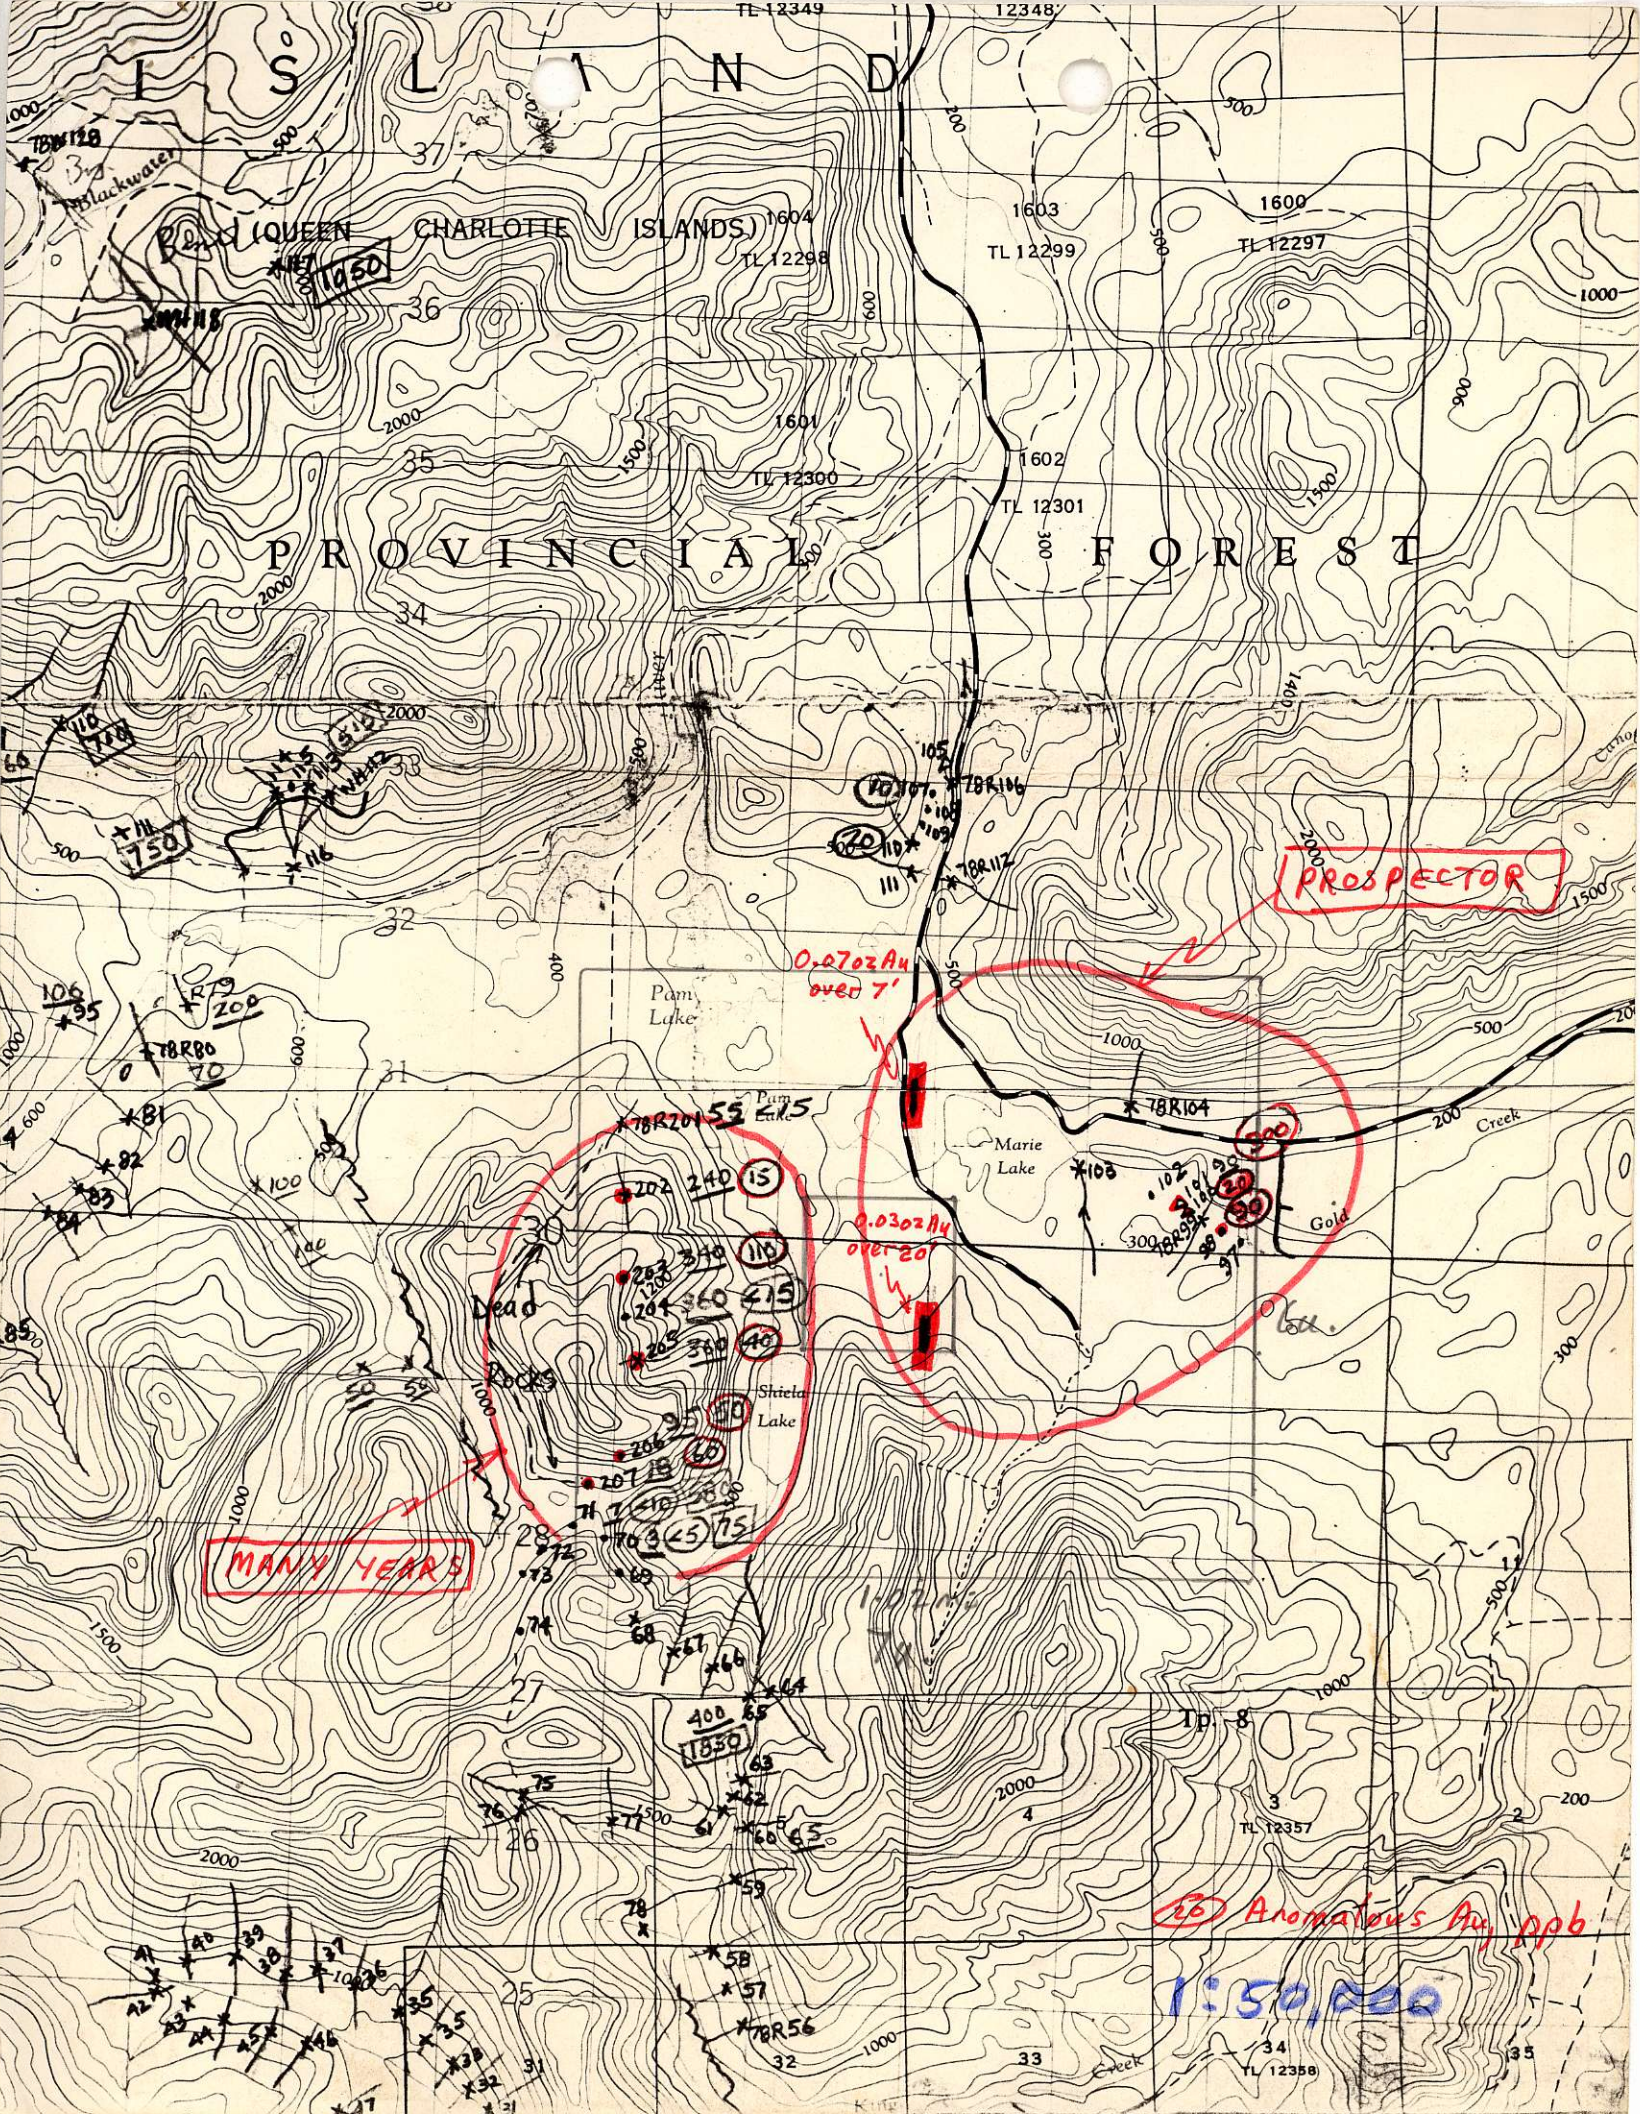

Comments: The area as a whole could represent a NS zone parallel to the one just W. of Marie Lake (Prospector property), or even a series of such zones. This property should be evaluated in conjunction with the Prospector.
