

Summary July 26/81

LA Pit

TA

AM: Dropped Pat & Ros & on detailed soil lines on north side of Bearskin Lake. Ken & I followed up 1% As, & 250ppm Sb anomaly on ~~the~~ south shore of Tatamonic Lake just inside? or outside? Ted's property. Soil (JNT225) was taken just atop highly silicified & altered rock (bedded phyllite?) which contained much visible asp & stibnite. See KS notes for sample descriptions.

PM. Traversed down steep north-facing slope in vicinity of po-sphal veins of Outlaw property.

Vicinity of po-sphal vns → cache of marble, gneiss, huffs. Pass north into altered gfp: brecciated, chalcedony, asp, local clusters of tourmaline needles, antimony? yellow oxidation. This end of the property must
