SUMMARY JUNE 4/81 (STREAM TRAVERSE)

TWO MAIN ROCKS OF INTEREST WERE FOUND IN FLOAT TODAY. FIRST WAS QTZ-CARB WHICH OCCURED AS THIN VEINS IN BOULDERS AND AS LARGE BOULDERS ITSELF. EVIDENTLY WIDE-SPREAD REPLACEMENT OF THE COUNTRY ROCK BY QTZ-CARB HAS OCCURED AND IF THE EXTENSIVE GOSSANS ARE ALL QTZ-CARB THEN THERE IS 8 SQUARE KM OF THIS UNIT. ANOTHER GOOD LOOKING UNIT IS A RED JASPER WITH CHALCEDONY AND OPAL VEINLETS AND DISSEMINATED MAGNETITE. THE MAGNETITE IS PROBABLY THE SOURCE OF THE ABUNDANT MAGNETITE ON SAND BARS IN THE CREEK.

THIS CREEK DEFINITELY HAS GOOD POTENTIAL FOR GOLD BUT THERE ARE TOO MANY GOSSANS TO EXAMINE WITHOUT SOME GEOCHEM BACK-UP.
